State Project: U-3315
WBS Element 35781.1.2
ATC Project No. 45.19873.0007

Dear Mr. Box:

ATC Associates of North Carolina, P.C. (ATC) has prepared this report to document the results of a preliminary site assessment (PSA) conducted at the above referenced site. The assessment was conducted in accordance with the Technical and Cost Proposal submitted to the North Carolina Department of Transportation (NCDOT) on July 27, 2012, and a Notice to Proceed letter issued by the NCDOT on August 16, 2012. This report describes field activities, laboratory results, estimated impacted soil quantities, and conclusions based on the collected data.

1.0 BACKGROUND INFORMATION

According to the request for technical and cost proposal (RFP) dated July 10, 2012, parcel 49 (site) is located at 1311 West 14th Street in Greenville, North Carolina. Note that the Pitt County online parcel information system lists the site's location as 1401 West 14th Avenue. A site plan is included as ***Figure 1***. The parcel is currently vacant and contains a dilapidated single-story structure. According to the adjacent property owner (Jonathan Sutton), the site may have historically operated as a tobacco warehouse. The parcel is bounded to the north by Farmville Boulevard, to the east by West 14th Avenue, and to the west by Raleigh Avenue. Adjacent properties toward the south are zoned commercial. As cited in the RFP and referenced by the North Carolina Department of Environment and Natural Resources' (NCDENR) Underground Storage Tank (UST) Section's registry, four USTs under facility ID 0-028711 were removed in 1990, 1991, and 1993. In addition, one UST has been reportedly filled with concrete. The historic use of these USTs is unknown; therefore, ATC contacted Jeff Welti of NCDENR on July 16, 2012, to further investigate the site. According to Mr. Welti, NCDENR's records reflect the address of 1311 West 14th Street (as opposed to Avenue). However, the UST owner (AB Whitley, Inc.) is the same as the owner referenced in the RFP. In addition, the records obtained by ATC depict one 1,000-gallon gasoline UST, one diesel UST of unknown size, and one varsol

UST of unknown size. According to the November 1990 GW/UST-3 forms, the tanks were abandoned and left in place. A copy of the forms and closure analytical data is included in ***Appendix A***.

In addition to contacting NCDENR, ATC obtained a report provided by Environmental Data Resources, Inc. (EDR) of Milford, Connecticut. The report was reviewed for information regarding reported releases of hazardous substances and petroleum products on or near the site. ATC also reviewed the "unmappable" (also referred to as "orphan") listings within the database report, cross-referencing available address information and facility names. Unmappable sites are listings that could not be plotted with confidence, but are potentially in the general area of the property in question based on the partial street address, city, or zip code. No unmappable sites were identified by ATC as being within the approximate minimum search distance from Parcel 49 based on the site reconnaissance and/or cross-referencing to mapped listings. In addition, Parcel 49 was not listed on any federal databases reviewed for this part of the historical assessment. However, Parcel 49 was listed in the state regulatory section as a UST facility under the name AB Whitley Inc. and located at 1311 West 14th Street. The EDR reported the USTs were installed between 1965 and 1979 and were permanently closed between 1990 and 1993. Details of the report state that the USTs were a 1,000-gallon gasoline, 550-gallon diesel, 550-gallon of unknown contents, 550-gallon of used oil, and a 280-gallon of heating oil UST. No information regarding release incidents was discussed. The 1958 Sanborn Map for the site depicts Growers Warehouse (Tobacco Sales) located on Parcel 49. The 1957 aerial photograph also depicts a structure that appears to be the same warehouse. The remaining historical information depicts the site as vacant. Relevant sections of the EDR report are included in ***Appendix A***.

2.0 FIELD ACTIVITIES

2.1 Geophysical Survey

Prior to performing soil assessment activities, ATC contacted Stantec Consulting Services, Inc. (Stantec) to perform a geophysical survey of the site. The purpose of the survey was to locate USTs and/or other buried structures on the parcel. This was to be done in the area of the proposed NCDOT right of way and included proposed excavations for drainage lines, utilities, and slope stake cuts. The survey was conducted on July 18 through 19, 2012 and included electromagnetic (EM) induction-magnetic detection and ground penetrating radar (GPR) surveys. According to Stantec's survey, one known and four possible USTs exist in the subsurface with sizes ranging from approximately 3 to 10 feet long and 4 to 5.5 feet wide. The possible USTs were marked in the field along with utilities and/or conduit. Based on the findings of the survey and proposed construction details, ATC performed a drilling event to assess soil and groundwater conditions in the vicinity of the UST system and the remaining parcel. The geophysical investigation report is included in ***Appendix B*** and details of the soil and groundwater assessment are included in ***Sections 2.2*** and ***2.3***.

2.2 Soil Assessment

Based on the results of the geophysical survey and in anticipation of a total take by the NCDOT, a soil assessment was completed on-site. On July 25, 2012, ATC mobilized to the site with South Atlantic Environmental Drilling and Construction Company (SAEDACCO) to conduct sampling activities. Over the course of the event, thirty-nine borings (SB49-1 through SB49-38 and TW49-1) were advanced using direct-push technology (DPT) drilling techniques. Prior to the drilling, Stantec was contracted to conduct utility clearance in conjunction with the geophysical survey investigation. The NCDOT and North Carolina's 811 service were also notified prior to field activities.

The locations of the borings are shown on the attached ***Figure 1***. Each boring was advanced to a depth of five feet below ground surface (bgs) via hand auger prior to utilizing DPT drilling techniques to complete the sampling. Soil samples were collected every 1 to 3 feet and screened with a photo-ionization detector (PID). Soils encountered consisted primarily of tan to gray silty sands and clays. The highest PID reading collected during the soil assessment was 55.6 parts per million (ppm) in the 8-10 feet bgs interval of SB49-25. Boring logs are included in ***Appendix C***.

One soil sample from each boring was submitted for laboratory analysis. This was determined by either submitting the interval with the highest PID reading, or, if not applicable, the deepest interval at which proposed construction would take place. Samples were submitted to SGS Analytical Perspectives (SGS) in Wilmington, North Carolina. Following proper chain-of-custody protocol, the samples were placed in laboratory supplied containers in an ice filled cooler for analysis of Total Petroleum Hydrocarbons – Gasoline Range Organics (TPH-GRO) and Diesel Range Organics (TPH-DRO) by EPA Method 8015 Modified. Based on PID readings, select samples (SB49-22 through SB49-25) were also analyzed for volatile organic compounds (VOCs) and semi-volatile organic compounds (SVOCs) by EPA methods 8260B and 8270D, respectively. Note that certain samples were analyzed for 8260B and 8270D based on the parcel's potential historical functions. A discussion of the laboratory results is provided in ***Section 3.0***.

2.3 Groundwater Assessment

ATC supervised SAEDACCO during the installation of temporary well TW49-1 on August 1, 2012. The boring was advanced to a depth of five feet bgs via hand auger prior to utilizing DPT drilling techniques to complete the well installation activities. Temporary well TW49-1 was installed to a depth of 15.8 feet bgs using 10 feet of 0.010-inch machine slotted 1-inch poly vinyl chloride (PVC) well screen and solid PVC riser. The annular space of the boring was filled with washed silica sand to an approximate depth of 2 feet bgs. The location of the temporary well is shown on the attached ***Figure 1*** and a boring log is included in ***Appendix C***. Note that the location was based on a requirement by the NCDOT to place the temporary well in close proximity to a proposed traffic signal pole foundation.

Following the temporary well installation, ATC gauged an approximate depth to water level of 3.65 feet below the top of well casing. Based on this shallow depth, the well was raised approximately 5 feet in order for the water table to intersect the screen. Following this adjustment, a peristaltic pump and dedicated polyethylene tubing were used to purge approximately one gallon prior to collecting a groundwater sample. The sample was submitted to

SGS under chain-of-custody protocol for analysis of VOCs by EPA Method 8260B and SVOCs by EPA Method 8270D. Following sampling, the top of well casing was surveyed for vertical elevation using standard surveying practices from a temporary benchmark with an arbitrary, assumed elevation of 100.00 feet. This was done in conjunction with adjacent temporary wells installed on the surrounding parcels. Following surveying, the borings were filled with native soil and finished to approximately 6 inches below surface grade with bentonite. The remainder of the boring was then filled using material to match the surround surface.

3.0 LABORATORY RESULTS

The results of the laboratory analyses for soil samples collected on-site indicated detectable concentrations of TPH-GRO and/or TPH-DRO in numerous samples. Comparison of detected concentrations to the NCDENR action level of 10 milligrams per kilogram (mg/kg) indicated exceedences of TPH-GRO in SB49-1 and TPH-DRO in SB49-28. The results of the VOC and SVOC analyses did not indicate any concentrations above the NCDENR soil-to-groundwater maximum soil contaminant concentration levels (MSCCs).

The results of laboratory analyses for groundwater sample TW49-1 did not indicate any compounds at concentrations above NC Title 15A NCAC 2L .0202 Groundwater Standards (2L Standards). Only one compound, chloromethane, was detected above laboratory detection limits but below 2L Standards. The laboratory analytical report is included in ***Appendix D*** and a summary of the laboratory results for the soil and groundwater sampling are provided in ***Tables 1*** and ***2***, respectively.

4.0 IMPACTED SOIL ASSESSMENT

The results of the soil and groundwater assessment indicate that soil has been impacted above the NCDENR action level. Therefore, ATC proceeded with estimating the quantity of impacted soil as directed in the RFP. Specifically, soil samples collected from the 2.5-5 feet bgs interval in borings SB49-1 and SB49-28 were used to calculate volumes in two locations. At the request of the NCDOT, volume calculations are separated into two categories. The first volume estimation represents the total quantity of impacted soil on-site. The second volume estimation represents the quantity of impacted soil that will need to be handled during the proposed construction. The volume to be handled during the proposed construction was estimated based on proposed drainage, utility, and cut/fill construction elevations provided by the NCDOT. Quantities are estimated in cubic yards and converted to tons using an NCDOT provided multiplier of 1.5 tons per cubic yard.

For the first volume estimation, ATC calculated a volume of approximately 217.5 cubic yards (326.25 tons) for the total volume of impacted soil on-site. For the second volume estimation, ATC calculated a volume of approximately 51.16 cubic yards (76.74 tons) for the volume of impacted soil that may need to be handled during proposed construction. It should be noted that the exact horizontal extent of impacted soil has not been fully delineated. As such, ATC's estimations should be considered approximations and actual quantities may vary. If the NCDOT requires a greater level of assurance regarding the extent, additional sampling could be performed for confirmation. Detailed calculations, references, and ATC's assumptions are included in ***Appendix E***.

5.0 CONCLUSIONS

ATC has completed PSA activities at the Parcel 49 site in Greenville, North Carolina. The results of the assessment indicate that soil at the site has been impacted above NCDENR action levels. Groundwater assessed in the area of a proposed traffic signal pole did not indicate constituents above 2L Standards. Based on a review of the site's historical data, geophysical investigation, and field assessment, ATC concludes that the impacted soil may be associated with current and/or former commercial/industrial activities at the site. ATC recommends that the collected data be provided to the NCDENR Division of Waste Management. If impacted soil or groundwater is encountered during construction activities, appropriate measures should be taken to ensure worker safety. In addition, any impacted soil or groundwater disturbed during construction should be handled and disposed of in accordance with applicable regulations.

ATC appreciates the opportunity to assist the NCDOT with this project. If you have questions or require additional information, please do not hesitate to contact us at (919) 871-0999.

Sincerely,
ATC Associates of North Carolina, P.C.

Greenville, NC 27834

RE: A.B. Whitley, Inc., 1311 W. 14th Street, Greenville

Dear UST Owner/Operator,

This office has received your notification of intent to permanently close underground storage tanks. All tank closure actions must comply with State requirements and provisions established in **North Carolina Administrative Code Title 15A Subchapter 2N (15A NCAC 2N), Underground Storage Tanks. Your thirty day waiting period is waived**; however, this office requires a **24-hour** notice before tank closure is performed.

Within **30 days** of tank closure, please **submit in duplicate to this Office**, the completed form **GW/UST-2** ("Site Investigation Report For Permanent Closure of UST") and **all information required** in "Guidelines for Assessing Underground Storage Tank Sites at Closure or Change-in-Service". You must update your existing UST registration (GW/UST-1) with our Raleigh Central Office.

Also, be aware that **owners and operators must report any and all suspected or confirmed releases within 24 hours of discovery** and proceed with requirements per 15A NCAC 2N, under penalty of law. **Any stockpiles of contaminated soils must be placed on plastic and covered; soil treatment/disposal must be performed within 45 days of excavation. Contact this office for proper approval or permits. Finally, please take time to review the enclosed information.** Should you have any questions, please contact the Groundwater Section in the Washington Office at (919) 946-6481.

Thank you,

DEM Groundwater Section

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

State- and tribal - equivalent NPL

NC HSDS: The Hazardous Substance Disposal Sites list contains locations of uncontrolled and unregulated hazardous waste sites. The file contains sites on the national priority list as well as the state priority list. The data source is the North Carolina Center for Geographic Information and Analysis.

A review of the NC HSDS list, as provided by EDR, and dated 08/09/2011 has revealed that there is 1 NC HSDS site within approximately 1 mile of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page

EXECUTIVE SUMMARY

State- and tribal - equivalent CERCLIS

SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environment & Natural Resources' Inactive Hazardous Sites Program.

A review of the SHWS list, as provided by EDR, and dated 03/01/2012 has revealed that there is 1 SHWS site within approximately 1 mile of the target property.

Other Ascertainable Records

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 03/15/2012 has revealed that there are 3 RCRA-NonGen sites within approximately 0.25 miles of the target property.

EDR PROPRIETARY RECORDS

EDR Proprietary Records

Manufactured Gas Plants: The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

A review of the Manufactured Gas Plants list, as provided by EDR, has revealed that there is 1 Manufactured Gas Plants site within approximately 1 mile of the target property.

EDR Aerial Photo Decade Package

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

When delivered electronically by EDR, the aerial photo images included with this report are for ONE TIME USE ONLY. Further reproduction of these aerial photo images is prohibited without permission from EDR. For more information contact your EDR Account Executive.

Thank you for your business.
Please contact EDR at 1-800-352-0050
with any questions or comments.

ATC Associates of North Carolina
Subsurface Investigation Report
Holloman, Oscar Property (Parcel 49)
1311 West 14th Street
Greenville, North Carolina

1.0 PURPOSE

Stantec Consulting Services Inc. performed a subsurface investigation utilizing surface Ground Penetrating Radar (GPR), Magnetic Detection and Electromagnetic Induction (EM) to survey the subject site located at 1311 West 14th Street in the city of Greenville, North Carolina and bordered on the north by Farmville Blvd, the west by Raleigh Street and the south by Spruce Street.

This site is currently a vacant lot that is partially fenced in with one building in the southwest region of the property. The building is one story and is open on one side. It is used as a storage shed at this time. Historically the site appeared to have operated as a repair shop or industrial site. According to NCDENR's UST Section Registry four (4) UST's were removed in 1990, 1991 and 1993. One (1) UST is reported as having been filled with concrete and not removed.

ATC Associates representative Mr. Justin C. Ballard, P.G. provided information and maps identifying the geophysical survey area to Stantec personnel prior to conducting the investigation.

Survey was conducted at the request of Justin C. Ballard, P.G. on July 18th to 19th 2012.

The purpose of this investigation was to:

- Survey for detectable structures (UST) and other subsurface anomalies.

The specified survey area was described as 1311 West 14th Street in the city of Greenville, North Carolina and bordered on the north by Farmville Blvd, the west by Raleigh Street and the east by West 14th Avenue.

A map depicting this area is included herein.

1.1 LIMITING CONDITIONS

In the event portions of the subject site were not accessible due to obstructions and/or stored items, those areas will be noted as inaccessible. An attempt was made to be as thorough as possible in the survey process. The surveyed area was defined, at the time of the investigation, by the Client. Client representative on site was Aaron Leff with ATC Associates of North Carolina.

In order to accurately conduct a radar survey, linear scans were made across the target area. Confined, obstructed or non-level areas which restrict the scanning pattern can impede the data collected and reduce the accuracy of the desired results.

The assessment of this site is based on our professional evaluation of the data gathered, and our experience with the properties with surface ground penetrating radar within this setting and scope. The evaluation rendered in this report meets the standards of our profession and was conducted in accordance with generally accepted guidelines for EM, Magnetic Detection and GPR surveys. It is generally recognized that the results of the EM, Magnetic Detection and GPR are non-unique and may not represent actual subsurface conditions.

Note: A diligent effort has been made to obtain the highest quality data and make useful interpretations.

Analysis of data was accomplished by visual inspection in the field and then recording the data for post processing.

1.2 APPROACH

Multiple tools involving differing technologies were used in this investigation.

For the GPR analysis, the entire subject survey area was divided logistically into manageable/workable sections.

These isometric sections represent the arrangement of the survey scans. Within these sections, scans were made in an orthogonal pattern on two foot centers. This provided two separate data sets for each section.

For Magnetic Detection and Electromagnetic Induction the area was systematically scanned in such a pattern so to cover over 100% of the accessible portions of the site. This is possible due

to the size and shape of the resulting fields produced from the sensors thus resulting in an "overlapping" of each transect covered.

2.0 METHODOLOGY

2.1 EQUIPMENT

Ground Penetrating Radar (GPR)

The GPR method transmits electromagnetic waves, which are pulsed at discrete distance/ time intervals.

The transmitted pulse radiates through the earth whereby a portion of the energy is reflected from interfaces of contrasting electrical properties (e.g. pavement and soil interface, soil stratigraphic changes and buried metallic objects) while the remaining energy continues until reaching additional reflectors where the process is repeated.

Reflected energy is received by the antennae and recorded for later processing and interpretation. Factors such as soil moisture, clay content, and variations in the dielectric constants of materials control the effectiveness of the GPR method. Wet conductive soils severely attenuate GPR signals and thus the effective depth of exploration.

The presence of foreign products leeched into the soil can eschew the data collected thereby affecting the images.

GPR energy cannot transmit through ferrous objects since metal acts as a pure reflector.

Stantec employed a MALA X3M/GPR digital radar unit with a 250 MHz center frequency, bistatic antenna to survey the site. The instrument was configured to detect moderately shallow reflectors within the geologic strata. The chosen instrument configuration facilitates the analysis. The GPR system unit was configured for data collection as follows:

- Trigger Source: Cart
- Range: 0-66 ns
- Samples per Scan: 250-512
- Sampling Frequency: 10852.27 to 7234.85 MHz
- Vertical High Pass Filter: 15 Samples
- Vertical Low Pass Filter: 5 Samples

• Point Interval: 0.669 to 0.906 in
• Pulses/Ft: 108.48

Software utilized for the collection and analysis of these data included:
RAMAC Ground Vision GPR Software version 3. 1. 19. (5).

2.2 EQUIPMENT

Electromagnetic (EM) and Magnetic Detection

The magnetic detection method is a LF (30 to 300 kHz) or VLF (below 30 kHz) receiver for detecting electromagnetic fields which radiate off of metallic objects. Magnetic locators operate on a simple principal.

An electronic transmitter and receiving antennae are mounted on a support structure. The two antennae are mounted a fixed distance apart aligned opposing so that the magnetic field measured by one sensor is negative of the magnetic field measured by the other. Each measures the average magnetic field component along their axis i.e. the magnetic field component along the longitudinal axis between the antennae.

This is calibrated in the field to a position (setting) which is neutral to the earth's natural magnetic field. When a metallic object is introduced within this field, it is detected as a differing field. This differing magnetic field is the field of interest.

Stantec employed this method of locating buried metallic objects as a compliment to GPR for the subject site.

Stantec selected the following instruments for this particular task:

- Subsurface Magnetic Locator ML-1M
- Schonstedt GA-52Cx. HeliFlux magnetic field sensors—drive frequency 7.5 KHz.
- RadioDetection 8000 T-10 model utilizing 512 hertz, 8 KHz, 33 KHz, 65 KHz, 50/60 hertz, long wave radio frequencies

3.0 DATA PROCESSING AND ANALYSIS-GPR

Stantec calculated the average radar propagation velocity for the subject sites. This procedure is necessary to provide reasonably accurate depth estimates for reflection events in the subsurface strata.

The average radar velocity for the site was estimated. It should be noted that the dielectric constants and hence the corresponding radar propagation velocities did vary by an order of degree(s) of magnitude across the surveyed area. Additionally, radar propagation velocity decreases with depth in most geologic sections.

Data processing of the GPR data prior to interpretation included band pass filtering, background removal, horizontal smoothing, trace editing, and time gain adjustments. After processing, the data profiles were reviewed for analysis. These processing techniques were applied to the GPR data to provide the highest quality data and therefore facilitate the overall interpretation process.

4.0 RESULTS & CONCLUSIONS

Stantec Consulting Services Inc. has completed a subsurface investigation of the subject site.

Multiple methods and technologies were used where permitted by the environment.

Survey scans were made throughout the targeted area.

The survey revealed anomalies within the subject site.

Target A - E: Five (5) areas approximately two (2) inches in diameter were noted. These discoveries were made using magnetics indicating metallic objects. Surface Ground Penetrating Radar data showed a metallic spike indicating shallow metal objects. A sketch of this area is included on page 13.

Target F -G: Two (2) areas approximately two (2) foot in diameter was noted. These discoveries were made using magnetics indicating metallic objects. Surface Ground Penetrating Radar data showed multiple metallic spikes indicating shallow metal objects. It is probable that trash with metal content was dumped in this area. A sketch of this area is included on page 13.

Target H: A four (4) inch square hollow metal pipe with two (2) inches of material above ground was noted. This discovery was made using magnetics indicating a metallic object(s). Surface Ground Penetrating Radar data was inconclusive. A sketch of this area is included on page 13.

Target I: An area approximately three (3) foot in diameter was noted. This discovery was made using magnetics indicating a metallic object(s). Surface Ground Penetrating Radar data was inconclusive. A sketch of this area is included on page 13.

Target J: An area approximately seven (7) foot by eight (8) foot in size was noted. This discovery was made using Surface Ground Penetrating Radar. No magnetic objects were detected here. Multiple hyperbolae were noted within the disturbed walls of earth strata. This may be indicative of trash dumped on a site and buried. A sketch of this area is included on page 13.

Target K: An area approximately seven and a half (7.5) foot by three and a half (3.5) foot in size was noted. This discovery was made using Surface Ground Penetrating Radar. No magnetic objects were detected here. Multiple hyperbolae were noted within the disturbed walls of earth strata. This may be indicative of trash dumped in a site and buried. A sketch of this area is included on page 13.

Target L: An area approximately three and a half (3.5) foot by four (4) foot in size was noted. This discovery was made using Surface Ground Penetrating Radar. No magnetic objects were detected here. Multiple hyperbolae were noted within the disturbed walls of earth strata. This may be indicative of trash dumped in a site and buried. A sketch of this area is included on page 13.

Target M: An area approximately three and a half (3.5) foot by five and a half (5.5) foot in size was noted. This discovery was made using Surface Ground Penetrating Radar. The radar data collected was not indicative as a solid object, but appeared to be more indicative as disturbed ground (subsurface). No magnetic objects were detected here. This is likely an area which may have contained a Possible UST. A sketch of this area is included on page 13.

Target N: An area approximately ten (10) foot by five (5) foot in size was noted. This discovery was made using Surface Ground Penetrating Radar. The radar data collected was not indicative as a solid object, but appeared to be more indicative as disturbed ground (subsurface). No magnetic objects were detected here. This is likely an area which may have contained a Possible UST. A sketch of this area is included on page 13.

Target O: An area approximately three (3) foot by four and a half (4.5) foot in size was noted. This discovery was made using Surface Ground Penetrating Radar. The radar data collected was not indicative as a solid object, but appeared to be more indicative as disturbed ground (subsurface). No magnetic objects were detected here. This is likely an area which may have contained a Possible UST. A sketch of this area is included on page 13.

Target P: An area approximately five and a half (5.5) foot by four and a half (4.5) foot in size was noted. This discovery was made using Surface Ground Penetrating Radar. The radar data collected was not indicative as a solid object, but appeared to be more indicative as disturbed ground (subsurface). No magnetic objects were detected here. This is likely an area which may have contained a Possible UST. A sketch of this area is included on page 13.

Target Q: An above ground steel barrel two (2) foot in diameter was noted. This discovery was visual and the barrel may be partially buried. Surface Ground Penetrating Radar data in the surrounding area was inconclusive. A sketch of this area is included on page 13.

Target R: A Known UST of approximately six (6) feet by six (6) feet was noted. There are two (2) small metal vent pipes approximately two (2) inches in diameter protruding from the delineated area of the Known UST. This anomaly abuts to the face of the exterior wall in which the footings interfere with the readings of the instrumentation used. This discovery was made using magnetics indicating metallic objects and Surface Ground Penetrating Radar. Surface Ground Penetrating Radar data showed a metallic signature and the stratigraphic walls of two different soil conditions. A sketch of this area is included on page 14.

1. The pole next to target N has a water pump spigot leaning against the pole. EM, Magnetic Detection and GPR were inconclusive in determining if additional water line traveled to or from spigot. A sketch of this area is included on page 13.
2. The back side of the building contained an above ground water spigot. EM, Magnetic Detection and GPR were inconclusive in determining if additional water line traveled to or from spigot. A sketch of this area is included on page 13.
3. Two (2) NCDOT Telephone fiber optic hand holes were discovered on the property. Fiber optic cables were detected using EM with frequencies of 512 Hz, 8 kHz and 33 kHz. A sketch of this area is included on page 13.
4. Traffic control loops were discovered leaving the traffic light pole at the corner of Farmville Blvd. and W 14th Ave. the lines were detected using EM with frequencies of 65 kHz and long wave radio. A sketch of this area is included on page 13.

5. Water pipes were discovered at the northwest corner of Spruce Street and West 14th Ave. from a fire hydrant going away from property and in street. The pipes were detected using EM with frequencies of 33 kHz, 65 kHz and 200 kHz. A sketch of this area is included on page 13.
6. Steel Gas lines were discovered at the edge of pavement/face of curb line along West 14th Ave. The lines were detected using EM with frequencies of 50/60 Hz, long wave radio, 8 kHz and 33 kHz. A sketch of this area is included on page 13.
7. A street light pole located on the south side of Farmville Blvd at approximately 100 feet east of Raleigh Street was discovered visually. EM, Magnetic Detection and GPR were inconclusive in determining direction of electric lines traveling to or from street light. A sketch of this area is included on page 13.
8. Two (2) parallel gas service lines were discovered along the southwest building face of Parcel 170 entering into the Parcel 49 limits from West 14th Ave to the north and traveling in the sidewalk and along the edge of the sidewalk to the gas meter located at the southern corner of the building and next building in rear of 170. A sketch of this area is included on page 14 and 15.

Further investigation with vacuum or other form of excavation may confirm and/or reveal more information. A sketch of this area is included on page 13.

As stated, this assessment is based on our professional evaluation of the data gathered and our experience with the properties with surface ground penetrating radar within this setting and scope.

Property shown from West 14th Ave. looking west

Property shown from Farmville Blvd looking west
Picture shows fiber optic cable delineated in orange

View of corner of property at W 14th and Farmville
Gas line delineated in yellow. Next to tree is NCDOT hand hole with fiber coming down pole.

LABORATORY ANALYTICAL REPORTS

Laboratory Report of Analysis

To: Justin Ballard
ATC Associates
2725 E. Millbrook Rd
Suite 121
Raleigh, NC 27604

Report Number: **31202416**

Client Project: **NCDOT U-3315**

Dear Justin Ballard,

Enclosed are the results of the analytical services performed under the referenced project for the received samples and associated QC as applicable. The samples are certified to meet the requirements of the National Environmental Laboratory Accreditation Conference Standards. Copies of this report and supporting data will be retained in our files for a period of five years in the event they are required for future reference. All results are intended to be used in their entirety and SGS is not responsible for use of less than the complete report. Any samples submitted to our laboratory will be retained for a maximum of thirty (30) days from the date of this report unless other arrangements are requested.

If there are any questions about the report or services performed during this project, please call Michael D. Page at (910) 350-1903. We will be happy to answer any questions or concerns which you may have.

Thank you for using SGS North America Inc. for your analytical services. We look forward to working with you again on any additional analytical needs.

Sincerely,
SGS North America Inc.

Laboratory Qualifiers

Report Definitions

DL	Method, Instrument, or Estimated Detection Limit per Analytical Method
CL	Control Limits for the recovery result of a parameter
LOQ	Reporting Limit
DF	Dilution Factor
RPD	Relative Percent Difference
LCS(D)	Laboratory Control Spike (Duplicate)
MS(D)	Matrix Spike (Duplicate)
MB	Method Blank

Qualifier Definitions

*	Recovery or RPD outside of control limits
B	Analyte was detected in the Lab Method Blank at a level above the LOQ
U	Undetected (Reported as ND or < DL)
V	Recovery is below quality control limit. The data has been validated based on a favorable signal-to-noise and detection limit
A	Amount detected is less than the Lower Method Calibration Limit
J	Estimated Concentration.
O	The recovery of this analyte in the OPR is above the Method QC Limits and the reported concentration in the sample may be biased high
E	Amount detected is greater than the Upper Calibration Limit
S	The amount of analyte present has saturated the detector. This situation results in an underestimation of the affected analyte(s)
Q	Indicates the presence of a quantitative interference. This situation may result in an underestimation of the affected analyte(s)
I	Indicates the presence of a qualitative interference that could cause a false positive or an overestimation of the affected analyte(s)
DPE	Indicates the presence of a peak in the polychlorinated diphenylether channel that could cause a false positive or an overestimation of the affected analyte(s)
TIC	Tentatively Identified Compound
EMPC	Estimated Maximum possible Concentration due to ion ratio failure
ND	Not Detected
K	Result is estimated due to ion ratio failure in High Resolution PCB Analysis
P	RPD > 40% between results of dual columns
D	Spike or surrogate was diluted out in order to achieve a parameter result within instrument calibration range

Samples requiring manual integrations for various congeners and/or standards are marked and dated by the analyst. A code definition is provided below:

M1	Mis-identified peak
M2	Software did not integrate peak
M3	Incorrect baseline construction (i.e. not all of peak included; two peaks integrated as one)
M4	Pattern integration required (i.e. DRO, GRO, PCB, Toxaphene and Technical Chlordane)
M5	Other - Explained in case narrative

Note Results pages that include a value for "Solids (%)" have been adjusted for moisture content.

Sample Receipt Checklist (SRC)

Client: **NCDOT-ATC** Work Order No.: **31202416**

1. ___ Shipped
   X Hand Delivered

2. X COC Present on Receipt
   ___ No COC
   ___ Additional Transmittal Forms

3. ___ Custody Tape on Container
   X No Custody Tape

4. X Samples Intact
   ___ Samples Broken / Leaking

5. X Chilled on Receipt Actual Temp.(s) in °C: 5.6, 5.6
   ___ Ambient on Receipt
   ___ Walk-in on Ice; Coming down to temp.
   ___ Received Outside of Temperature Specifications

6. X Sufficient Sample Submitted
   ___ Insufficient Sample Submitted

7. ___ Chlorine absent
   ___ HNO3 < 2
   ___ HCL < 2
   ___ Additional Preservatives verified (see notes)

8. X Received Within Holding Time
   ___ Not Received Within Holding Time

9. X No Discrepancies Noted
   ___ Discrepancies Noted
   ___ NCDENR notified of Discrepancies*

10. ___ No Headspace present in VOC vials
    ___ Headspace present in VOC vials >6mm

Notes:

Laboratory Report of Analysis

To: Justin Ballard
ATC Associates
2725 E. Millbrook Rd
Suite 121
Raleigh, NC 27604

Report Number: **31202420**

Client Project: **NCDOT U3315**

Dear Justin Ballard,

Enclosed are the results of the analytical services performed under the referenced project for the received samples and associated QC as applicable. The samples are certified to meet the requirements of the National Environmental Laboratory Accreditation Conference Standards. Copies of this report and supporting data will be retained in our files for a period of five years in the event they are required for future reference. All results are intended to be used in their entirety and SGS is not responsible for use of less than the complete report. Any samples submitted to our laboratory will be retained for a maximum of thirty (30) days from the date of this report unless other arrangements are requested.

If there are any questions about the report or services performed during this project, please call Michael D. Page at (910) 350-1903. We will be happy to answer any questions or concerns which you may have.

Thank you for using SGS North America Inc. for your analytical services. We look forward to working with you again on any additional analytical needs.

Sincerely,
SGS North America Inc.

ANALYTICAL PERSPECTIVES IS NOW PART OF SGS, THE WORLD'S LEADING INSPECTION, VERIFICATION, TESTING AND CERTIFICATION COMPANY.

Laboratory Qualifiers

Report Definitions

DL	Method, Instrument, or Estimated Detection Limit per Analytical Method
CL	Control Limits for the recovery result of a parameter
LOQ	Reporting Limit
DF	Dilution Factor
RPD	Relative Percent Difference
LCS(D)	Laboratory Control Spike (Duplicate)
MS(D)	Matrix Spike (Duplicate)
MB	Method Blank

Qualifier Definitions

*	Recovery or RPD outside of control limits
B	Analyte was detected in the Lab Method Blank at a level above the LOQ
U	Undetected (Reported as ND or < DL)
V	Recovery is below quality control limit. The data has been validated based on a favorable signal-to-noise and detection limit
A	Amount detected is less than the Lower Method Calibration Limit
J	Estimated Concentration.
O	The recovery of this analyte in the OPR is above the Method QC Limits and the reported concentration in the sample may be biased high
E	Amount detected is greater than the Upper Calibration Limit
S	The amount of analyte present has saturated the detector. This situation results in an underestimation of the affected analyte(s)
Q	Indicates the presence of a quantitative interference. This situation may result in an underestimation of the affected analyte(s)
I	Indicates the presence of a qualitative interference that could cause a false positive or an overestimation of the affected analyte(s)
DPE	Indicates the presence of a peak in the polychlorinated diphenylether channel that could cause a false positive or an overestimation of the affected analyte(s)
TIC	Tentatively Identified Compound
EMPC	Estimated Maximum possible Concentration due to ion ratio failure
ND	Not Detected
K	Result is estimated due to ion ratio failure in High Resolution PCB Analysis
P	RPD > 40% between results of dual columns
D	Spike or surrogate was diluted out in order to achieve a parameter result within instrument calibration range

Samples requiring manual integrations for various congeners and/or standards are marked and dated by the analyst. A code definition is provided below:

M1	Mis-identified peak
M2	Software did not integrate peak
M3	Incorrect baseline construction (i.e. not all of peak included; two peaks integrated as one)
M4	Pattern integration required (i.e. DRO, GRO, PCB, Toxaphene and Technical Chlordane)
M5	Other - Explained in case narrative

Note Results pages that include a value for "Solids (%)" have been adjusted for moisture content.

Sample Receipt Checklist (SRC)

Client: **NCDOT-ATC** Work Order No.: **31202420**

1. ___ Shipped
   X Hand Delivered
   Notes:

2. X COC Present on Receipt
   ___ No COC
   ___ Additional Transmittal Forms

3. ___ Custody Tape on Container
   X No Custody Tape

4. X Samples Intact
   ___ Samples Broken / Leaking

5. X Chilled on Receipt Actual Temp.(s) in °C: 5.6
   ___ Ambient on Receipt
   X Walk-in on Ice; Coming down to temp.
   ___ Received Outside of Temperature Specifications

6. X Sufficient Sample Submitted
   ___ Insufficient Sample Submitted

7. ___ Chlorine absent
   ___ HNO3 < 2
   ___ HCL < 2
   ___ Additional Preservatives verified (see notes)

8. X Received Within Holding Time
   ___ Not Received Within Holding Time

9. X No Discrepancies Noted
   ___ Discrepancies Noted
   ___ NCDENR notified of Discrepancies*

10. ___ No Headspace present in VOC vials
    ___ Headspace present in VOC vials >6mm

Laboratory Report of Analysis

To: Justin Ballard
ATC Associates
2725 E. Millbrook Rd
Suite 121
Raleigh, NC 27604

Report Number: **31202431**

Client Project: **NCDOT**

Dear Justin Ballard,

Enclosed are the results of the analytical services performed under the referenced project for the received samples and associated QC as applicable. The samples are certified to meet the requirements of the National Environmental Laboratory Accreditation Conference Standards. Copies of this report and supporting data will be retained in our files for a period of five years in the event they are required for future reference. All results are intended to be used in their entirety and SGS is not responsible for use of less than the complete report. Any samples submitted to our laboratory will be retained for a maximum of thirty (30) days from the date of this report unless other arrangements are requested.

If there are any questions about the report or services performed during this project, please call Michael D. Page at (910) 350-1903. We will be happy to answer any questions or concerns which you may have.

Thank you for using SGS North America Inc. for your analytical services. We look forward to working with you again on any additional analytical needs.

Sincerely,
SGS North America Inc.

ANALYTICAL PERSPECTIVES IS NOW PART OF SGS, THE WORLD'S LEADING INSPECTION, VERIFICATION, TESTING AND CERTIFICATION COMPANY.

Laboratory Qualifiers

Report Definitions

DL	Method, Instrument, or Estimated Detection Limit per Analytical Method
CL	Control Limits for the recovery result of a parameter
LOQ	Reporting Limit
DF	Dilution Factor
RPD	Relative Percent Difference
LCS(D)	Laboratory Control Spike (Duplicate)
MS(D)	Matrix Spike (Duplicate)
MB	Method Blank

Qualifier Definitions

*	Recovery or RPD outside of control limits
B	Analyte was detected in the Lab Method Blank at a level above the LOQ
U	Undetected (Reported as ND or < DL)
V	Recovery is below quality control limit. The data has been validated based on a favorable signal-to-noise and detection limit
A	Amount detected is less than the Lower Method Calibration Limit
J	Estimated Concentration.
O	The recovery of this analyte in the OPR is above the Method QC Limits and the reported concentration in the sample may be biased high
E	Amount detected is greater than the Upper Calibration Limit
S	The amount of analyte present has saturated the detector. This situation results in an underestimation of the affected analyte(s)
Q	Indicates the presence of a quantitative interference. This situation may result in an underestimation of the affected analyte(s)
I	Indicates the presence of a qualitative interference that could cause a false positive or an overestimation of the affected analyte(s)
DPE	Indicates the presence of a peak in the polychlorinated diphenylether channel that could cause a false positive or an overestimation of the affected analyte(s)
TIC	Tentatively Identified Compound
EMPC	Estimated Maximum possible Concentration due to ion ratio failure
ND	Not Detected
K	Result is estimated due to ion ratio failure in High Resolution PCB Analysis
P	RPD > 40% between results of dual columns
D	Spike or surrogate was diluted out in order to achieve a parameter result within instrument calibration range

Samples requiring manual integrations for various congeners and/or standards are marked and dated by the analyst. A code definition is provided below:

M1	Mis-identified peak
M2	Software did not integrate peak
M3	Incorrect baseline construction (i.e. not all of peak included; two peaks integrated as one)
M4	Pattern integration required (i.e. DRO, GRO, PCB, Toxaphene and Technical Chlordane)
M5	Other - Explained in case narrative

Note Results pages that include a value for "Solids (%)" have been adjusted for moisture content.

Sample Receipt Checklist (SRC)

Client: **NCDOT-ATC** Work Order No.: **31202431**

1. ___ Shipped
   X Hand Delivered
   Notes:

2. X COC Present on Receipt
   ___ No COC
   ___ Additional Transmittal Forms

3. ___ Custody Tape on Container
   X No Custody Tape

4. X Samples Intact
   ___ Samples Broken / Leaking

5. X Chilled on Receipt Actual Temp.(s) in °C: 0.8
   ___ Ambient on Receipt
   ___ Walk-in on Ice; Coming down to temp.
   ___ Received Outside of Temperature Specifications

6. X Sufficient Sample Submitted
   ___ Insufficient Sample Submitted

7. ___ Chlorine absent
   ___ HNO3 < 2
   ___ HCL < 2
   ___ Additional Preservatives verified (see notes)

8. X Received Within Holding Time
   ___ Not Received Within Holding Time

9. ___ No Discrepancies Noted
   X Discrepancies Noted
   ___ NCDENR notified of Discrepancies*

10. X No Headspace present in VOC vials
    ___ Headspace present in VOC vials >6mm

Comments: One SB49-31 (2.5-5) vial was mislabeled as Sb49-33 (2.5-5), but was identified by its collection date and time. The Methanol vials for the SB172-1 (6-8) samples were not labeled, but were in the same vial foam block as the rest of that sample.

Laboratory Report of Analysis

To: Justin Ballard
ATC Associates
2725 E. Millbrook Rd
Suite 121
Raleigh, NC 27604

Report Number: **31202495**

Client Project: **NCDOT U-3315**

Dear Justin Ballard,

Enclosed are the results of the analytical services performed under the referenced project for the received samples and associated QC as applicable. The samples are certified to meet the requirements of the National Environmental Laboratory Accreditation Conference Standards. Copies of this report and supporting data will be retained in our files for a period of five years in the event they are required for future reference. All results are intended to be used in their entirety and SGS is not responsible for use of less than the complete report. Any samples submitted to our laboratory will be retained for a maximum of thirty (30) days from the date of this report unless other arrangements are requested.

If there are any questions about the report or services performed during this project, please call Michael D. Page at (910) 350-1903. We will be happy to answer any questions or concerns which you may have.

Thank you for using SGS North America Inc. for your analytical services. We look forward to working with you again on any additional analytical needs.

Sincerely,
SGS North America Inc.

Laboratory Qualifiers

Report Definitions

DL	Method, Instrument, or Estimated Detection Limit per Analytical Method
CL	Control Limits for the recovery result of a parameter
LOQ	Reporting Limit
DF	Dilution Factor
RPD	Relative Percent Difference
LCS(D)	Laboratory Control Spike (Duplicate)
MS(D)	Matrix Spike (Duplicate)
MB	Method Blank

Qualifier Definitions

*	Recovery or RPD outside of control limits
B	Analyte was detected in the Lab Method Blank at a level above the LOQ
U	Undetected (Reported as ND or < DL)
V	Recovery is below quality control limit. The data has been validated based on a favorable signal-to-noise and detection limit
A	Amount detected is less than the Lower Method Calibration Limit
J	Estimated Concentration.
O	The recovery of this analyte in the OPR is above the Method QC Limits and the reported concentration in the sample may be biased high
E	Amount detected is greater than the Upper Calibration Limit
S	The amount of analyte present has saturated the detector. This situation results in an underestimation of the affected analyte(s)
Q	Indicates the presence of a quantitative interference. This situation may result in an underestimation of the affected analyte(s)
I	Indicates the presence of a qualitative interference that could cause a false positive or an overestimation of the affected analyte(s)
DPE	Indicates the presence of a peak in the polychlorinated diphenylether channel that could cause a false positive or an overestimation of the affected analyte(s)
TIC	Tentatively Identified Compound
EMPC	Estimated Maximum possible Concentration due to ion ratio failure
ND	Not Detected
K	Result is estimated due to ion ratio failure in High Resolution PCB Analysis
P	RPD > 40% between results of dual columns
D	Spike or surrogate was diluted out in order to achieve a parameter result within instrument calibration range

Samples requiring manual integrations for various congeners and/or standards are marked and dated by the analyst. A code definition is provided below:

M1	Mis-identified peak
M2	Software did not integrate peak
M3	Incorrect baseline construction (i.e. not all of peak included; two peaks integrated as one)
M4	Pattern integration required (i.e. DRO, GRO, PCB, Toxaphene and Technical Chlordane)
M5	Other - Explained in case narrative

Note Results pages that include a value for "Solids (%)" have been adjusted for moisture content.

Sample Receipt Checklist (SRC)

Client: **NCDOT-ATC** Work Order No.: **31202495**

1. ___ Shipped
   X Hand Delivered

2. X COC Present on Receipt
   ___ No COC
   ___ Additional Transmittal Forms

3. ___ Custody Tape on Container
   X No Custody Tape

4. X Samples Intact
   ___ Samples Broken / Leaking

5. X Chilled on Receipt Actual Temp.(s) in °C: 0.7, 4.2
   ___ Ambient on Receipt
   X Walk-in on Ice; Coming down to temp.
   ___ Received Outside of Temperature Specifications

6. X Sufficient Sample Submitted
   ___ Insufficient Sample Submitted

7. ___ Chlorine absent
   ___ HNO3 < 2
   ___ HCL < 2
   ___ Additional Preservatives verified (see notes)

8. X Received Within Holding Time
   ___ Not Received Within Holding Time

9. ___ No Discrepancies Noted
   X Discrepancies Noted
   ___ NCDENR notified of Discrepancies*

10. X No Headspace present in VOC vials
    ___ Headspace present in VOC vials >6mm

Notes:

Comments: Received two MEOH vials with no sample id or label.

Did not received vials for TW172-1 (6-8), only one 4oz amber jar.

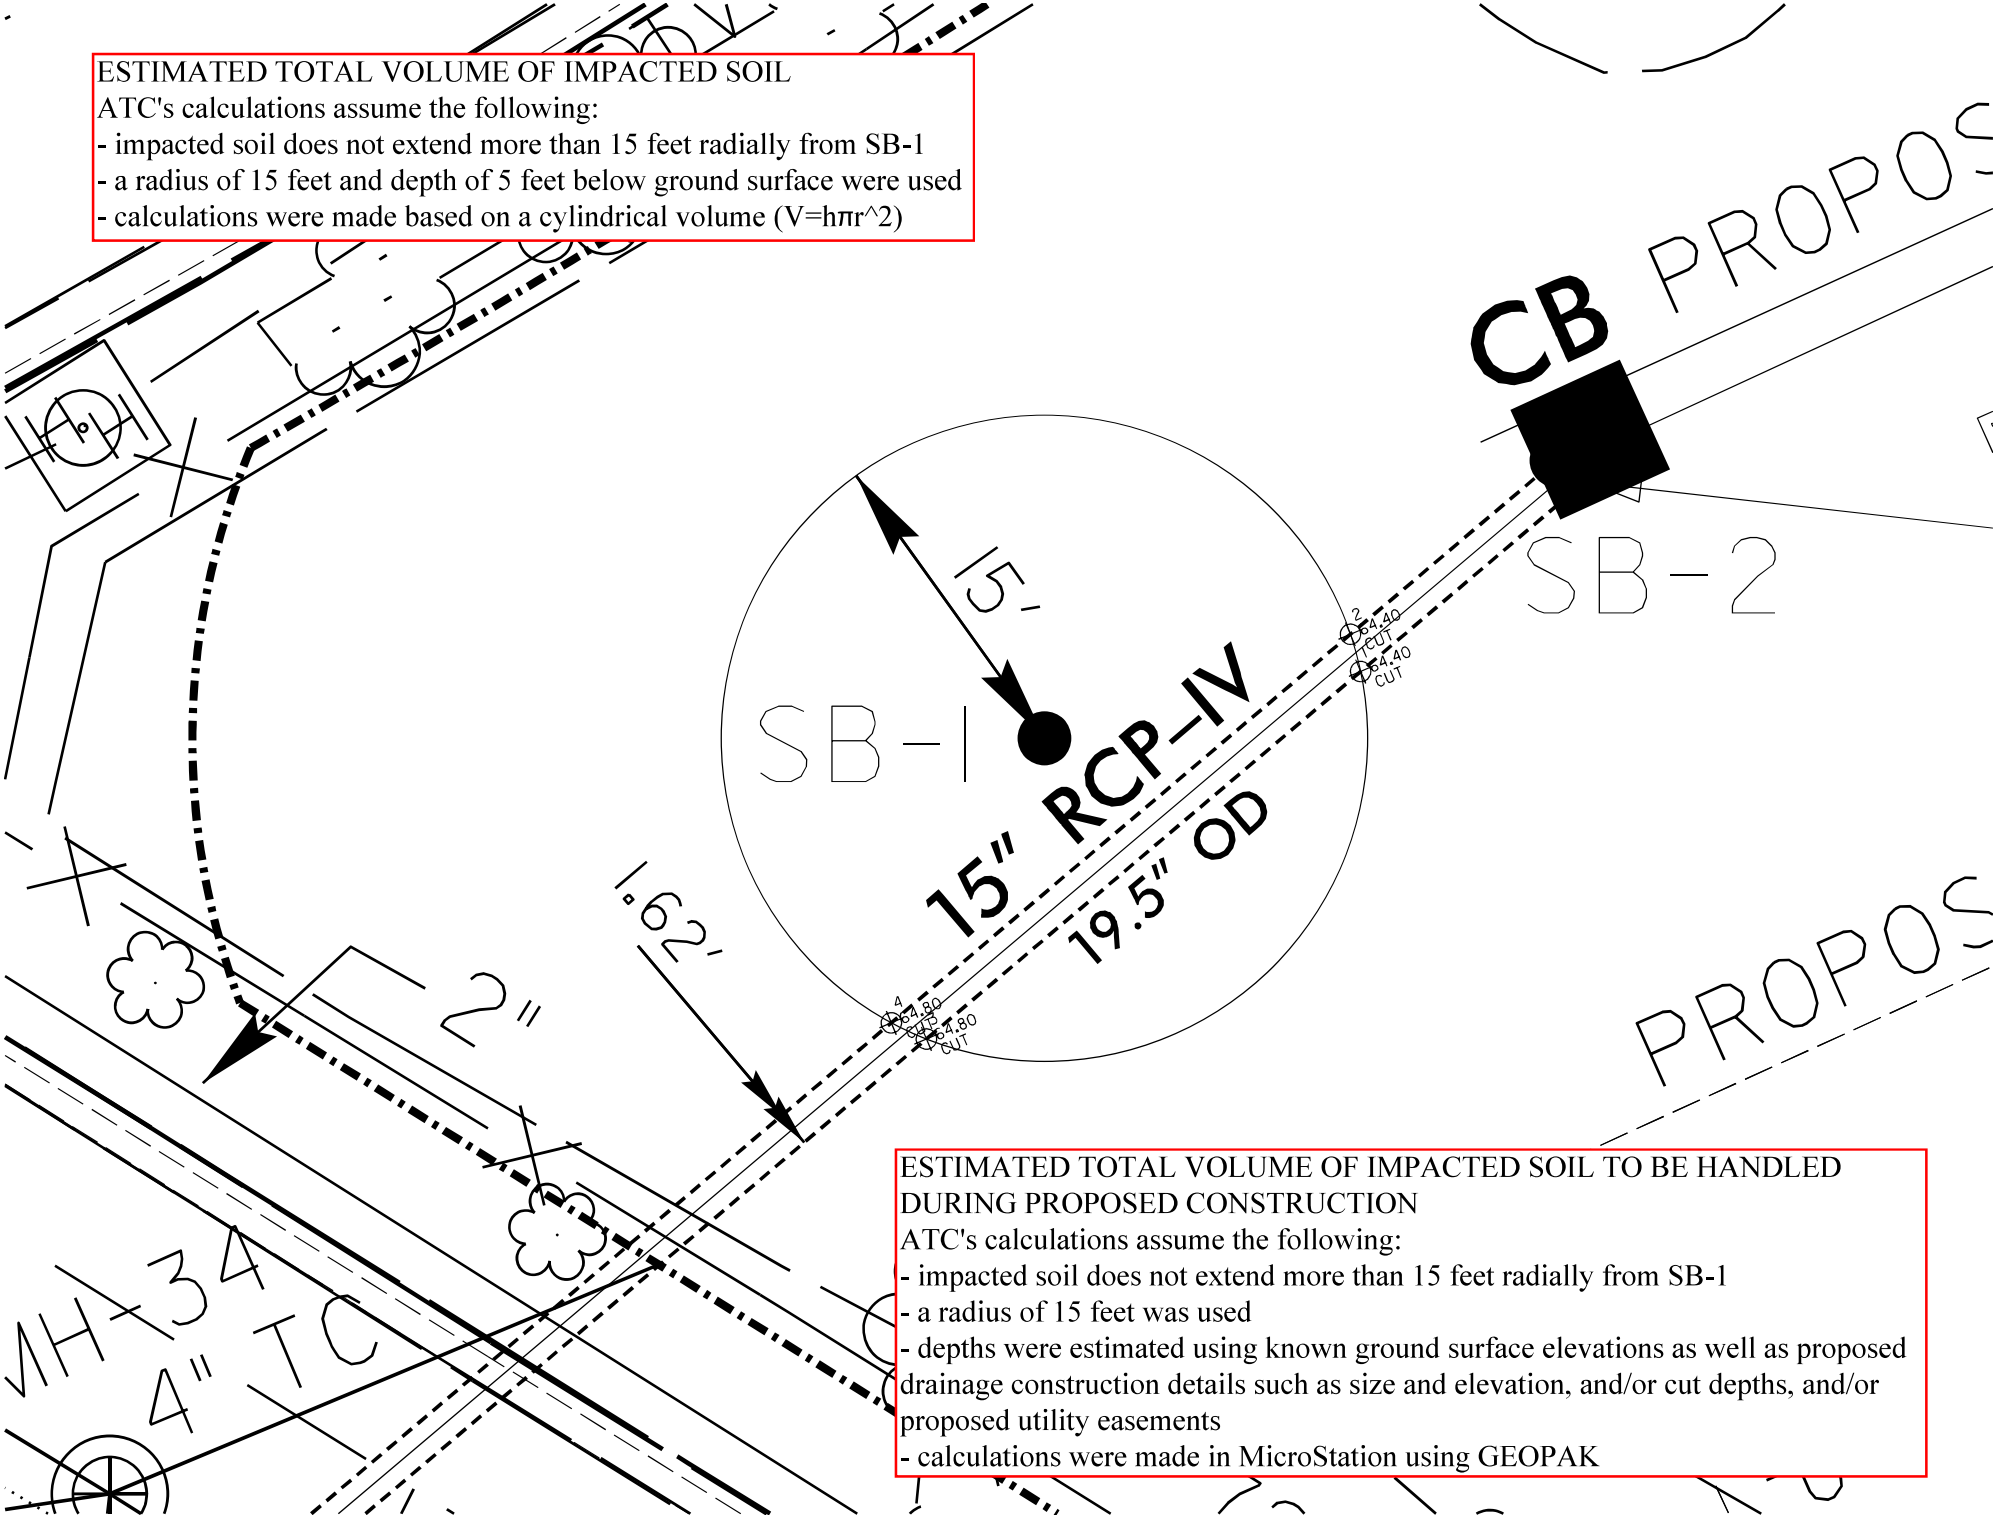
Inspected and Logged in by: JJ

Date: Mon-8/6/12 00:00

*NCDENR must be notified when collection, holding time or preservation requirements are not met. MI_11.6

APPENDIX E

VOLUMETRIC CALCULATIONS



ESTIMATED TOTAL VOLUME OF IMPACTED SOIL
ATC's calculations assume the following:
- impacted soil does not extend more than 15 feet radially from SB-1
- a radius of 15 feet and depth of 5 feet below ground surface were used
- calculations were made based on a cylindrical volume (V=hπr^2)
CB

PROPOS
ESTIMATED TOTAL VOLUME OF IMPACTED SOIL TO BE HANDLED DURING PROPOSED CONSTRUCTION
ATC's calculations assume the following:
- impacted soil does not extend more than 15 feet radially from SB-1
- a radius of 15 feet was used
- depths were estimated using known ground surface elevations as well as proposed drainage construction details such as size and elevation, and/or cut depths, and/or proposed utility easements
- calculations were made in MicroStation using GEOPAK

Average cut for construction at SB49-1 = 1.5'
15' radius of contaminated soil

(3.1416)x(15')x(15')x(1.5')= 1060.29 C.Ft. = 39.27 Cubic Yards

****

Cut of 5' for 15' radius of contaminated soil

(3.1416)x(15')x(15')x(5')= 3534.29 C.Ft. = 130.90 Cubic Yards

****

Cut for pipe included in the contruction cut that should be
subtracted from the total cut and pipe cut.

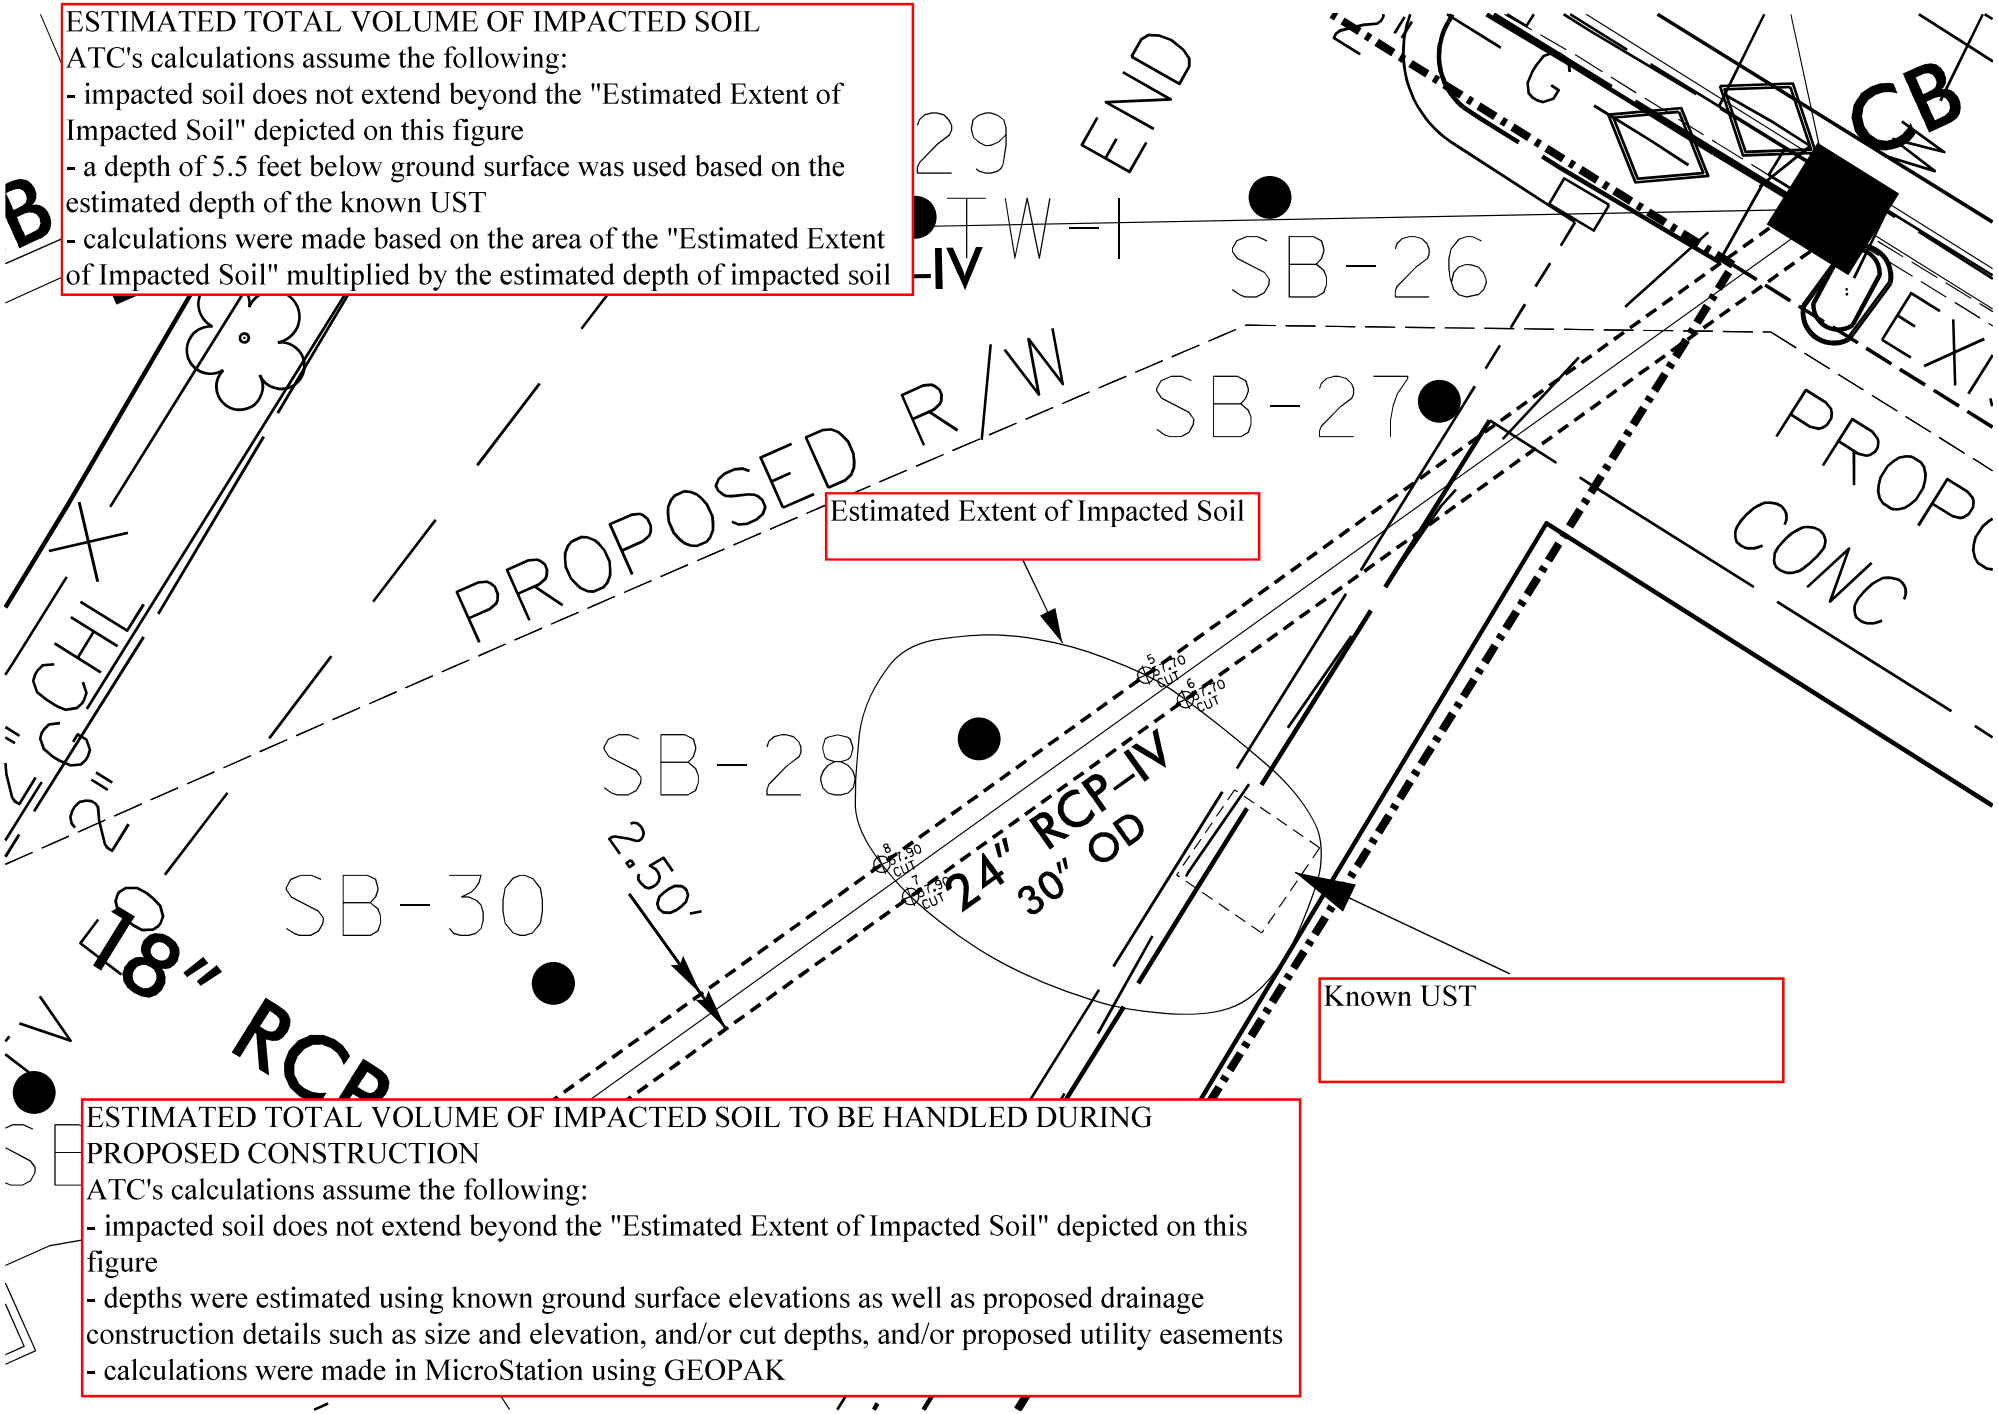
(4.903 Sq.yds.)x[(1.5')/3] = 2.452 Cubic Yards

****

Total cut for construction and pipe

39.27 + 5.843 - 2.452 = 42.661 Cubic Yards

****



ESTIMATED TOTAL VOLUME OF IMPACTED SOIL
ATC's calculations assume the following:
- impacted soil does not extend beyond the "Estimated Extent of Impacted Soil" depicted on this figure
- a depth of 5.5 feet below ground surface was used based on the estimated depth of the known UST
- calculations were made based on the area of the "Estimated Extent of Impacted Soil" multiplied by the estimated depth of impacted soil

```

Average cut for road construction at SB49-28 = 0'

0 Cubic Yards

****

Cut of 5.5' for contaminated soil outline
Soil Outline = 437.5 Sq.Ft.

(437.5 Sq.Ft.)x(5.5 Ft.)= 2406.25 C.Ft. = 89.12 Cubic Yards

Minus out underground tank volume of 2.52 Cubic Yards

Total Contaminated Soil = 86.60 Cubic Yards

****
