STATE HIGHWAY COMMISSION

PLAN AND PROFILE OF PROPOSED STATE HIGHWAY

GUILFORD - ROCKINGHAM COUNTIES

Beginning of Sta. 15+11.31, a point in the ℄ of U.S. 29 approx. 500' South of the Guilford-Rockingham County Line, and running in a Northeasterly direction along or near the ℄ of present U.S. 29 to Sta. 90+52.66, and thence cross-country to Sta. 505+52.28 North of the intersection of U.S. 158. End of Project.
This contract includes grading, drainage surfacing, fencing and culverts.

THESE PLANS MICRO-FILMED BY NORTH CAROLINA STATE HIGHWAY COMMISSION REPRODUCTION DEPT.

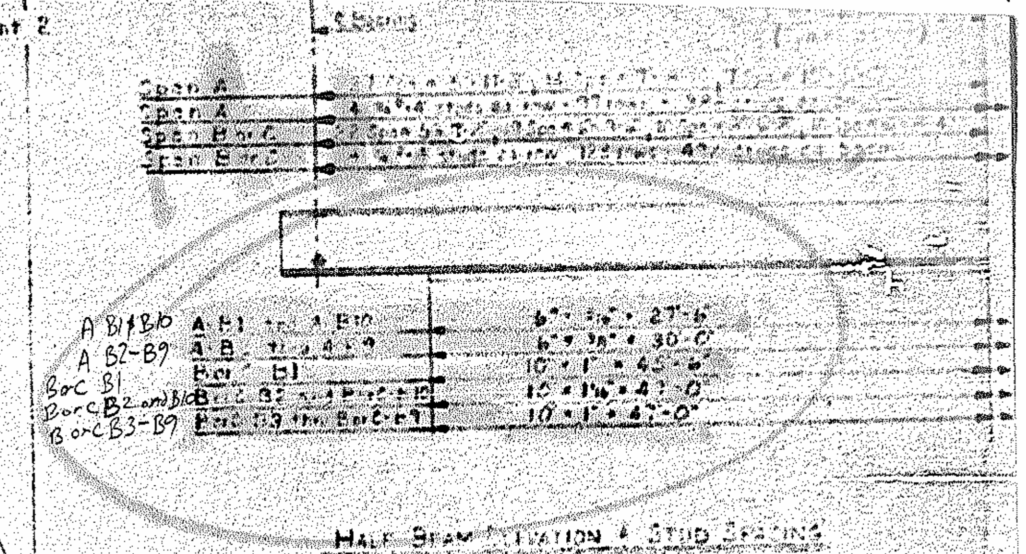
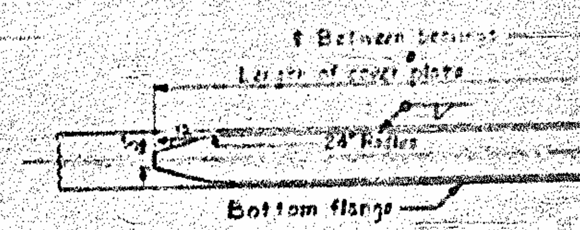
BEAM, DIAPHRAGM AND BEARING PLATE LAYOUT

Diaphragm dimensions are from € bearing to back of channel
(⁵⁄₁₆) denotes fill plate
Diaphragms are 15[33.9 except as noted





COVER PLATE WELD DETAIL

Note: Cover plate lengths are symmetrical about € between bearings for bottom flange only.

NOTES:

End stiffeners to be parallel to ends of beam web. No stiffeners are required at end bents or on outside of exterior beams.

Field connections of diaphragms to beams shall be bolted using ¾"ø H.S. bolts in accordance with the specs.

At the contractor's option fill plates, when used, may be combined with masonry plates.

At the contractor's option he may substitute for the cover plates designated on the plans cover plates of equivalent area provided these plates are at least ⅝" thick and do not exceed a width equal to the flange width less 2" or a thickness equal to 1½ time the flange thickness. The size of the weld for attaching these cover plates shall be in accordance with the AWS specifications.

At The Contractor's Option Metal Rail May Be Either Aluminum Or Galvanized Steel In Accordance With The Requirements Of The General Notes And The Following Specifications For The Alternate Materials; However The Contractor Will Be Required To Use The Same Rail Material On All Structures Of The Project For Which Metal Rail Is Designated.

ALUMINUM RAILS

Material For Posts, Bases & Rails, Expansion Bars, & Clamp Bars Shall Be A.S.T.M. B-221 Alloy 6061 Or 6062-T6.

Material For Aluminum Washer Shall Be A.S.T.M. B-209 Alloy Alclad 2024-T3.

Material For Rivets Shall Be A.S.T.M. B316 Alloy 6061 Or 6062-T6. Rivets Shall Be St. Button Head & Cone Point Cold Driven As Per Drawing.

Material For Aluminum Nuts Shall Be A.S.T.M. B-211 Alloy 6061 or 6062-T6.

The Base Of Rail Posts, Or Any Other Aluminum Surface In Contact With Concrete Shall Be Thoroughly Coated With An Aluminum Impregnated Caulking Compound Of Approved Quality.

GALVANIZED STEEL RAILS

Materials And Galvanizing Are To Conform To The Following Specifications.

Rail Post & Post Base: A.S.T.M. A36 Grade Structural Steel - Galvanized To A.S.T.M. A-123.

Rail & Expansion Bar: A.S.T.M. A36 Grade Structural Steel Galvanized To A.S.T.M. A-123.

Closure Plates & Shims: Steel A285 Grade C - Galvanized To A.S.T.M. A123

Nuts & Washers For Top End Of Anchor Assembly For Steel Rail Shall Be Type 430 Stainless Steel.

The Cut Ends Of Galvanized Steel Railing, After Grinding Smooth, Shall Be Given Two Coats Of Zinc Paint Meeting The Requirements Of Federal Specification MIL-P-26915 USAF Type 1.

GENERAL NOTES

1- Railing Shall Be Continuous From End Post To End Post Of Bridge. Each Joint In Rail Length Shall Be Spliced As Detailed. Panel Lengths Of Rail Shall Be Attached To A Minimum Of Four Posts.

2- End Of Rail To Clear Face Of Concrete End Post By 1 1/2".

3- Material For Anchor Studs Shall Be Type 430 Stainless Steel With Minimum 70,000 P.S.I. Ultimate Strength. Threads To Be Rolled & Not Cut. Studs To Be Embedded 7" In Concrete. Nuts Shall Be American Standard Finished Hexagon Thick Nuts, Class 2B Thread. Anchor Plates Shall Be A.S.T.M. A7 Or A36. Machine Screws For Rail Attachment Shall Be Stainless Steel.

4- Certified Mill Reports Are Required For Rails & Posts. Shop Inspection Is Not Required.

5- Metal Rail Posts To Be Set Normal To Curb Grade.

6- Method Of Measurement For Metal Rails: Unless Otherwise Stated, The Length Of Metal Rails, To Be Paid For, Shall Be The Continuous Horizontal Length Measured From Inside To Inside Of Concrete Posts.

7- Curved Rail Usage: Where Rails Are To Be Used On Bridges On Horizontal And/Or Vertical Curvature, The Contractor May At His Option Have The Required Curvature In The Rail Formed In The Shop Or In The Field. In Either Event The Rail Shall Conform Without Buckling Or Kinking To The Required Curvature In A Uniform Manner Acceptable To The Engineer.

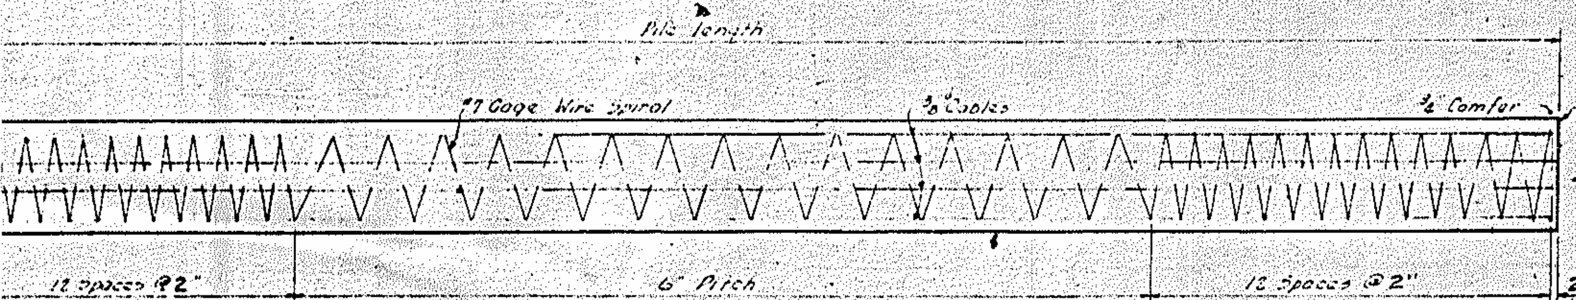
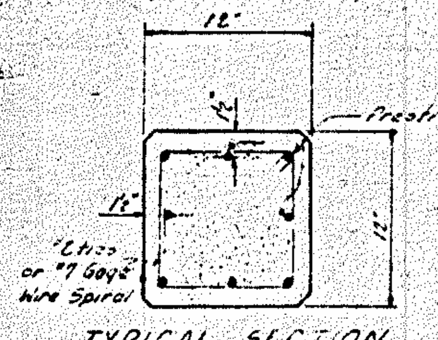
PILE

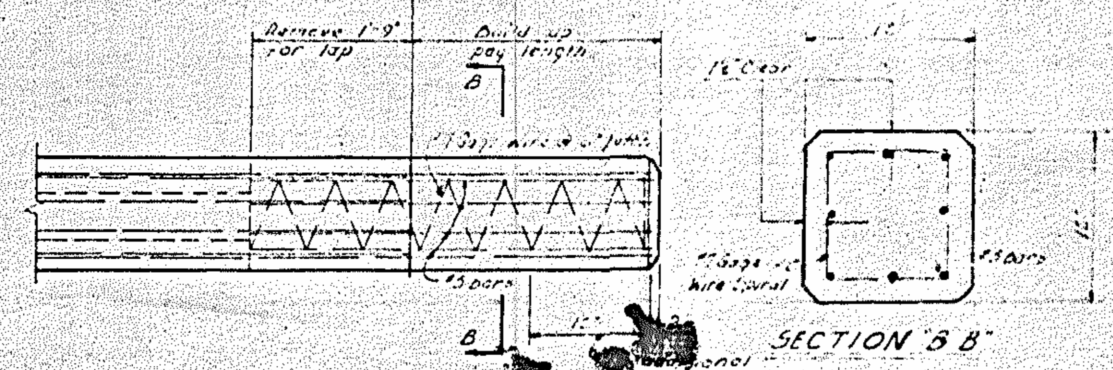


ALTERNATE PILE



TYPICAL SECTION

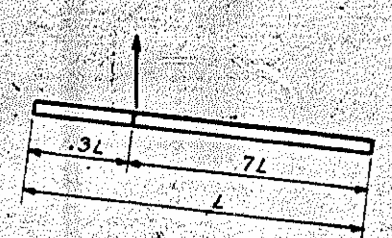
Wt. of Pile = 150 Lbs. per foot length



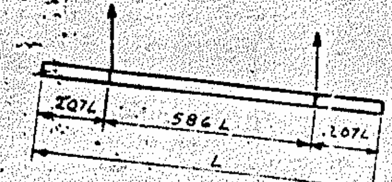
PILE BUILD-UP

SECTION "B-B"

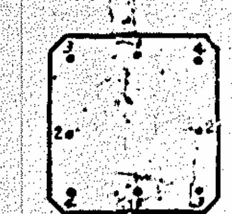
Devices for lifting the piles from the casting beds shall be approved by the Engineer. Where piles will be exposed to view in the structure, inserts set in the piles to receive threaded eye-bolts or similar approved devices shall be used. Loops of cable cast in the pile will not be permitted except for piles for end bents and foundations which will not be exposed to view. The use of satisfactory clamps or slings will be permitted where this is practicable without the use of lifting devices cast in the piles. After eye-bolts or other attachments have been removed, the openings shall be repaired in a satisfactory manner before delivery to the bridge site in order to obtain a uniform appearance. It will not be necessary to remove loops of cable or other lifting devices in piles for end bents and foundations which will not be exposed to view.



Method of picking up piles up to 51 feet
1 pick up point



Method of picking up Piles 52 feet to 70 feet
2 pick up points



TYPICAL PATTERN FOR BURNING CABLES

If cable stress is to be relieved by burning, the cables shall be burned in opposite pairs as indicated in the pattern shown above. Cables 1-1 to be burned before 2-2 etc.
Not more than 4 cables, say 1-1 and 2-2, may be burned at any one section before these same pairs of cables are burned at both ends of the bed and between each pair of piles in the bed.

Design Data:
Concrete: f'c = 5,000 p.s.i.
fc = 2,000 p.s.i.
Impact in handling = 50%

In driving piles, a method approved by the Engineer shall be used, whereby the head of the piles is not damaged.

All material and workmanship as per the Specifications of North Carolina State Highway Commission.

The contractor may use either #2 ties or #7 Gage Wire Spiral as shown.

Build up where necessary shall be done in accordance with the specifications, except that the reinforcing steel required in the build ups shall be included in the contract unit price per foot for the pile and will not be paid for as reinforcing steel.

All prestressing strand shall be 7 wire stress relieved cables in accordance with the Specifications. The contractor may, at his option, use either of the two types of cable listed below; however, all cables in a pile shall be of the same type.

Type	Area	Ultimate Strength	Applied Prestress
3/8" High Strength	0.0860"	23,000# per cable	16,100# per cable
7/16" Standard	0.1080"	27,000# per cable	18,900# per cable

All prestressing strand shall meet the requirements of ASTM A416.

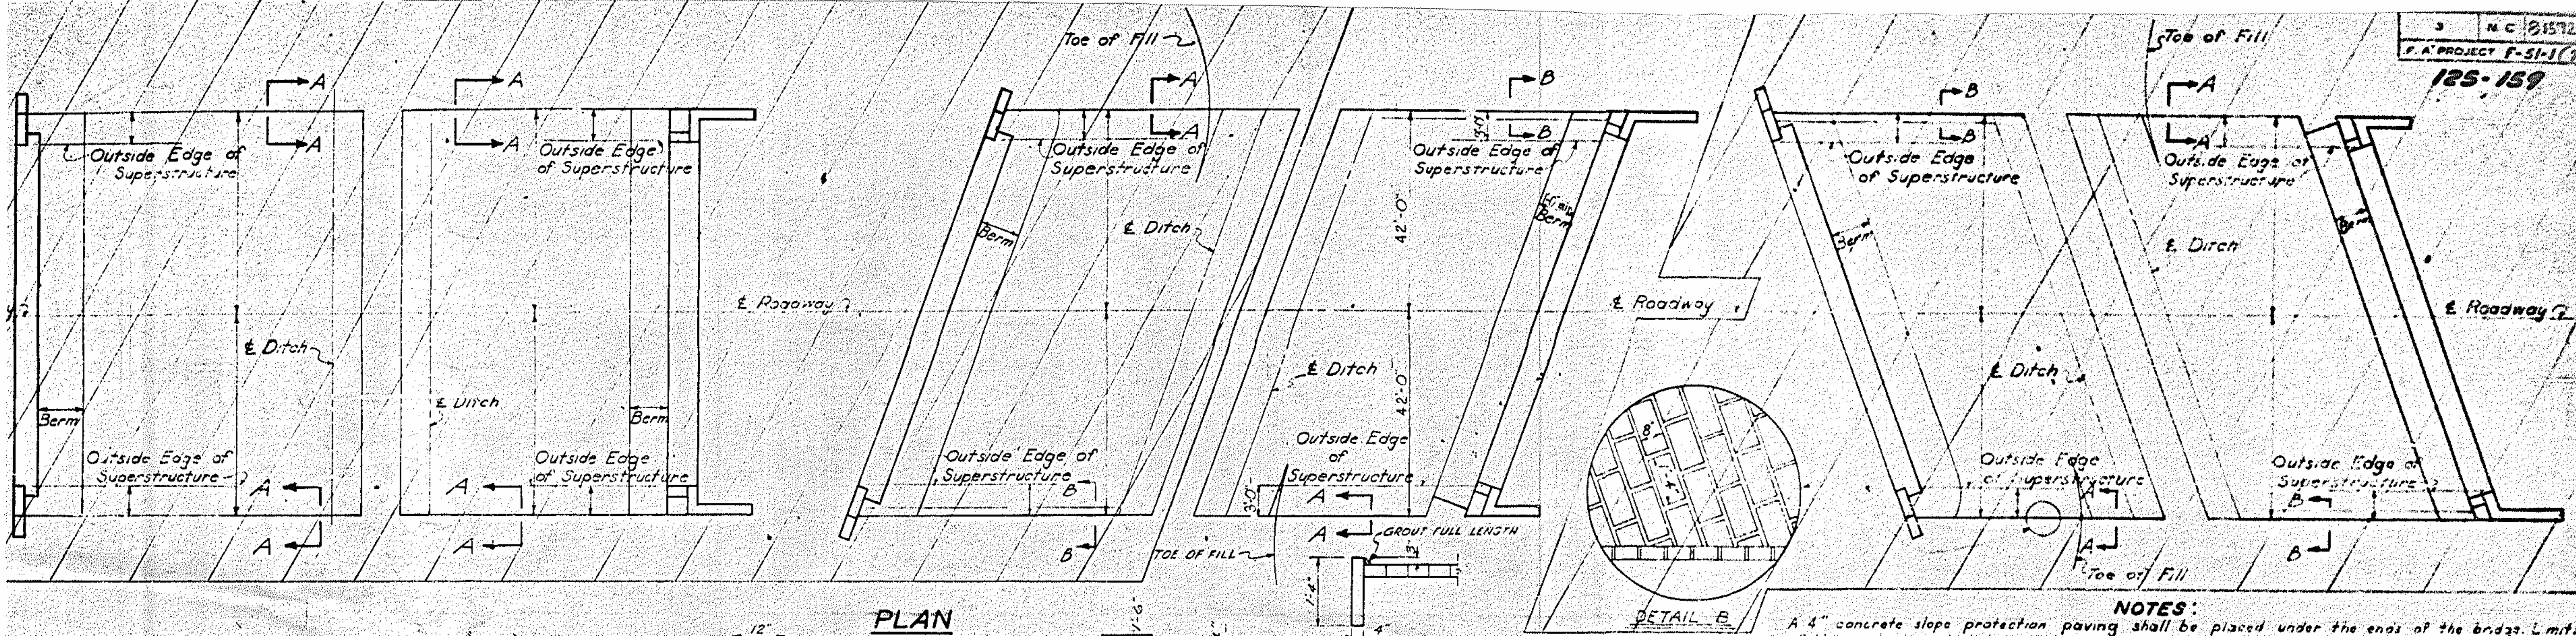
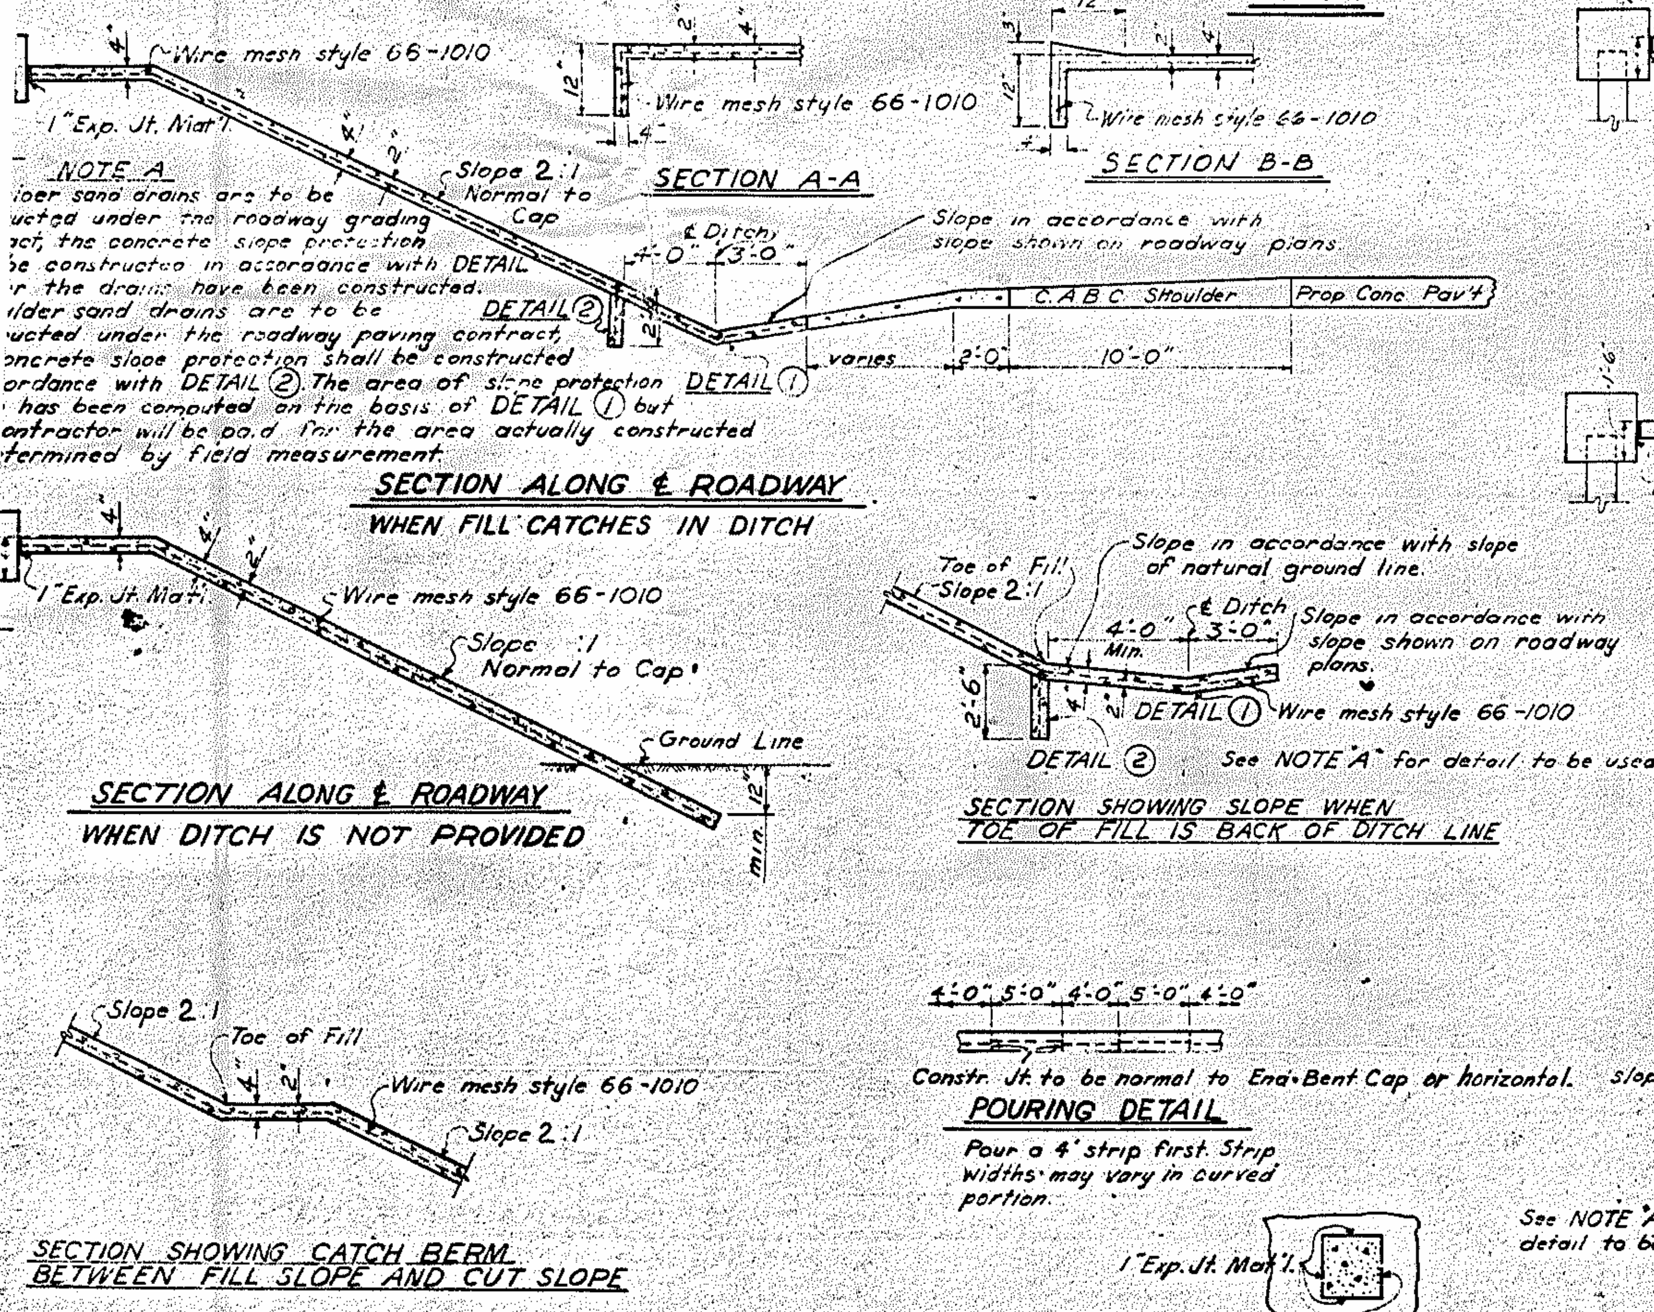
Revised to show sodium for act. | Revised for spacing of wire spiral at ends. | Revised to change spacing of strands | Revised for note concerning [illegible] | Revised for pick up points.

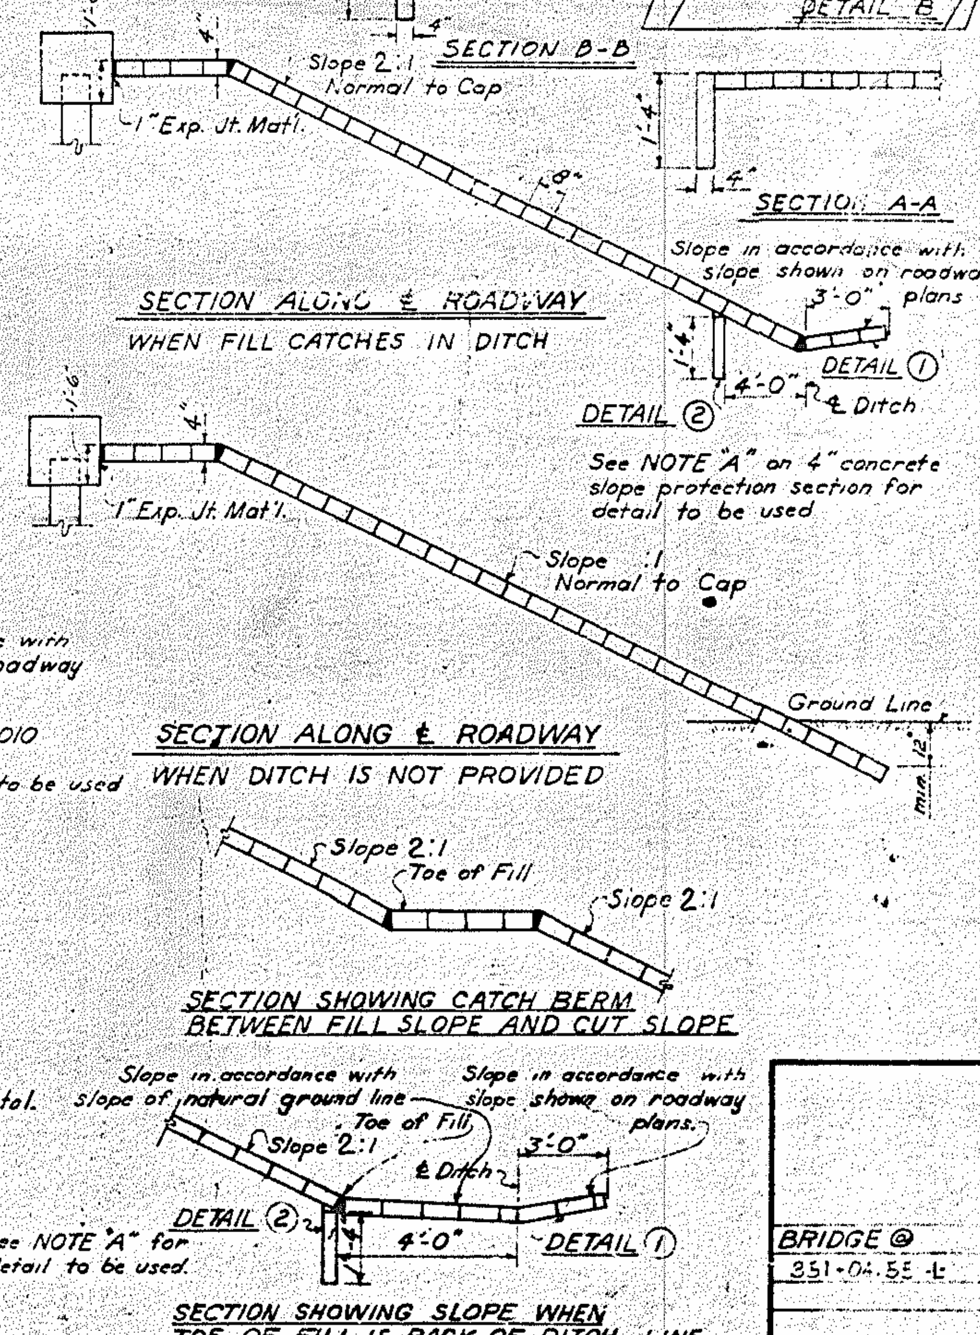




DETAILS FOR ALTERNATE "A"

REV. 1 & 2. TO ELIMINATE 30° CORNER AT TOE OF SLOPE FOR SKEWED V.G.T.P. CROSSES, ADD SECT. B-B, AND TO ALLOW ALTERNATE FOR CONSTRUCTION JTS.

PLAN WHERE CONC. OR CONC. BLOCK SLOPE PROTECT. MUST BE PLACED AROUND A BENT COLUMN



DETAILS FOR ALTERNATE "B"

REV. No. 3. TO TAKE OUT DIMENSIONS FROM OUTSIDE EDGE OF SUPERSTRUCTURE TO OUTSIDE SLOPE PROTECTION.

REV. No. 1. TO SHOW BERM 1'-6" ABOVE BOTTOM OF CAP.

NOTES:

A 4" concrete slope protection paving shall be placed under the ends of the bridge. Limits of the protection shall be as shown in the details. The contractor, at his option, may place either type, Alternate "A" or "B", as described below. Immediately before placing the paving, the slope shall be properly shaped and firmly compacted so that it conforms to the lines and grades shown. The finished surface shall be reasonably smooth and uniform and shall not vary from lines, grades, and sections shown by more than ½" along a 10' straight edge.

ALTERNATE "A"

Alternate "A" shall consist of 4" poured in place concrete paving as shown in details on this sheet. Concrete shall be Class B. The concrete surface shall be floated with a wooden float and finished.

The quantity to be paid for under this item shall be the number of square yards of slope protection measured in place complete and accepted, including the area of the toe walls below 4" thickness of protection (For example 8" pay area for toe wall 1'-0" deep.)

The quantity measured as provided for above, shall be paid for at the contract unit price per square yard for mesh excavation, backfilling, preparation of slopes, and all materials, labor, equipment, tools and incidentals necessary to complete the work.

ALTERNATE "B"

Alternate "B" shall consist of solid concrete blocks 4"×8"×16" laid in horizonal courses such that those in successive courses will break joints with units in the preceding one. Blocks are to be laid with their long axis parallel to the end bent cap with grouted joints preferably ¾" but not less than ½" nor more than 1¼" wide between successive courses and ends of blocks. Joints shall be grouted by pouring a mixture of one part Portland cement to three parts sand mixed with sufficient water to enable the mixture to be poured through a spout.

The concrete blocks shall be cast to accurate dimensions, shall have uniform surface color and texture, and shall be manufactured of materials to produce a compressive strength of not less than 3,000 p.s.i. at age of 28 days. No broken blocks shall be used except in constructing a straight line along each side of the paving down the slope. Care shall be taken to frame the blocks so as to give a uniform workmanlike joint and surface.

Method of measurement and basis of payment shall be as prescribed above under Alternate "A".

ALTERNATE "A" wire mesh reinforcing to be style 66-1010 60" wide. Adjacent runs of wire mesh to lap at least 6". Slope Protection to be poured in alternate 4' & 5' strips as shown in Pouring Detail. The cost of wire mesh to be included in the contract unit price bid per square yard for 4" concrete slope protection.

The same type of slope protection shall be used under both ends of any one bridge.
