Memo

Date: Friday, November 30, 2018

Project: NCDOT SR 1003 (Camden Road) from future I-295 (Fayetteville Outer Loop) to NC 59 (Hope Mills Road)
WBS No. 39001.1.1 Cumberland County
Division 6

To: NCDOT

Sean Matuszewski
Project Engineer
NCDOT Division 6

From: Coleman Marchin, HDR Engineering, Inc. of the Carolinas

Subject: **GeoEnvironmental Report for Planning**
Camden Road Improvements in Fayetteville, North Carolina

HDR has completed the GeoEnvironmental Report for Planning. This report has the following components and is transmitted as:

__X__ Hazardous Materials Report (7) pages

Please contact me if you have any questions concerning this project.

Sincerely,
HDR Engineering, Inc. of the Carolinas

Coleman Marchin
Environmental Geologist II

555 Fayetteville Street, Suite 900, Raleigh, NC 27601-3034
(919) 232-6600

Hazardous Materials Report

HDR Engineering, Inc. of the Carolinas (HDR) GeoEnvironmental staff conducted a limited Hazardous Materials Investigation for an approximate 5.5-mile section of Camden Road from the future I-295 (Fayetteville Outer Loop) to Hope Mills Road (NC 59) (Project Corridor) in Fayetteville, Cumberland County, North Carolina. Camden Road is predominantly a two-lane undivided road that connects Hope Mills to Fayetteville, approximately eight miles southwest of downtown Fayetteville. NCDOT-Division 6is proposing STIP No. U-3422, which includes engineering and environmental planning tasks for improvements to Camden Road.

HAZARDOUS MATERIALS EVALUATION

Purpose

The main purpose of this investigation is to identify properties within the Project Corridor that are or may be contaminated, and may therefore result in increased project costs and future liability if acquired by the North Carolina Department of Transportation (NCDOT). Hazardous material impacts may include, but are not limited to, active and abandoned underground storage tank (UST) sites, hazardous waste sites, regulated landfills and unregulated dumpsites.

Techniques/Methodologies

Environmental Data Resources Incorporated (EDR) was contracted by HDR to complete a database search (**Attachment 3**) of federal, state, local, and tribal environmental records for the Project Corridor. HDR provided EDR with the Project Corridor map and search parameters (up to a 1/2 mile buffer zone from the Project Corridor), which constitutes the EDR search boundary (EDR buffer zone). An environmental information database search was performed by EDR on November 8, 2018. In addition, historical aerial photographs, topographic maps, city directory listings, and Sanborn Fire Insurance maps were reviewed for the Project Corridor by HDR.

Subsequent to review of the EDR report, HDR conducted a field reconnaissance on November 13, 2018 to verify database findings and assign a risk ranking to sites of potential concern. General criteria used by HDR GeoEnvironmental staff in assigning risk are summarized in the table below.

Risk Ranking	Criteria
Low	This designation applies to sites that pose a relatively low environmental risk, such as undeveloped land, residential property, agricultural property, and light retail operations that display no indications of present or historic waste handling. This designation may also apply to sites with businesses that may handle small amounts of hazardous materials, but do not use USTs or ASTs and practice appropriate waste-handling procedures. These businesses must also display an awareness of, and need for, protective measures of potential release pathways, such as practicing diligent surface spill cleanup and Best Management Practices. Examples of low risk sites include undeveloped land, residential property, agricultural property, banks, and warehouse facilities.
Moderate	This designation applies to sites with businesses that handle larger amounts of hazardous materials than low risk sites, or display less diligence in hazardous materials handling practices. Moderate risk sites also include vacant sites of indeterminate usage and former UST sites with tanks removed prior to 1988. Determination of the need for further investigation at moderate risk sites is site-specific, based on the physical condition and history of the site, the site's location, and the scope of work to be performed during road reconstruction. Examples of moderate risk sites include auto repair shops with improper waste-handling practices or a high degree of surface staining, former service stations, or any facility for which additional review may be warranted.
High	This designation applies to sites with a high potential for adverse impacts to the Project Corridor. High risk sites include active service stations, former service stations with USTs removed prior to implementation of appropriate state and federal UST regulations, service stations with known LUST cases, industrial facilities with large waste-handling operations or hazardous materials usage or storage, and sites of reported emergency response-type spills, regardless of corrective actions taken. A conservative approach is taken regarding active service stations. Even if no LUSTs are identified by the regulatory agencies, a "material threat of release" exists, therefore active service stations are considered "high risk".
Indeterminate	These are sites which, at the time of report preparation, did not include sufficient information to include a high, medium or low ranking. Indeterminate-risk sites often require additional file review to determine the details of any related environmental issues at the site.

Findings

Five sites of potential environmental concern were identified within the Project Corridor during this hazardous materials evaluation. These sites are summarized in the table below and discussed in more detail on the following pages.

Site No. (from west to east)	Site Address	EDR Report ID	Site Reconnaissance Usage	Potential Concern	Risk	Database Records / Additional Information
1	**6428 Camden Road**	**Circle K 2720358 The Pantry Store #35 Pantry #3051**	**Vacant Service Station**	**LAST(s), UST(s), Groundwater Contamination**	**High**	**UST(s), Financial Assurance, FINDS, LAST(s), IMD**
2	**6454 Rockfish Road**	**Circle K 2723009**	**Circle K Service Station**	**UST(s), Recent environmental work along Camden Road**	**High**	**UST(s), Financial Assurance**
3	**6047 Camden Road**	**ALCO 32 Albemarle Oil Co. ALCO-Camden Road**	**Shell Service Station**	**UST(s)**	**Medium**	**UST(s), Financial Assurance, NPDES, EDR Historical Auto Stations**
4	**2997 Hope Mills Road**	**The Pantry 3028**	**Camden Crossing Shopping Center**	**LUST, Groundwater Contamination**	**High**	**UST, LUST, LUST Trust, IMD, Financial Assurance**
5	**3050 N. Main Street**	**Murphy USA #6540**	**Murphy USA Service Station**	**UST(s)**	**Low**	**UST(s), Financial Assurance**

UST Facilities

Based on the HDR study, five (5) sites may contain petroleum USTs and/or contamination concerns from past UST/ASTs within the Project Corridor. These included the ALCO 32 (6047 Camden Rd.), Circle K 2723009 (6454 Rockfish Rd.), Circle K 2720358 (6428 Camden Rd.), The Pantry 3028 (2997 Camden Rd.), and Murphy USA #6540 (3050 N. Main St.).

Of the facilities of concern listed above, Circle K 2720358, Circle K 2723009 and The Pantry 3028 are listed as **High Risk**. These sites have a history of groundwater or soil contamination and are located within the Project Corridor.

Murphy USA #6540 is not considered to be High Risk site based on distance/direction from the Project Corridor and lack of historic evidence of a petroleum release.

ALCO 32 is considered to be a **Medium Risk** site because USTs are located approximately 100 feet from the centerline of Camden Road; however, there is a lack of evidence of a historic petroleum release at the site.

Hazardous Waste Sites / Brownfields

No apparent Hazardous Waste Sites or Brownfields sites were identified within the project limits, per the EDR database report or site reconnaissance.

Landfills

The former Hope Mills Landfill was identified within the project limits as a Hazardous Substance Disposal Site, per the EDR report. The former Hope Mills Landfill is located approximately 0.75 miles south of the Project Corridor. According to NCDEQ Pre-Regulatory Landfill files, the landfill was active from approximately 1970 until 1978. The landfill was closed after undocumented waste (55-gallon drums containing oil) were discovered by NCDEQ personnel. Subsequent environmental studies at the Hope Mills Landfill detected surface and groundwater contamination downgradient. Groundwater affected by the landfill is generally flowing south toward Rockfish Creek (away from the Project Corridor) and is not expected to impact the Project Corridor.

Drycleaners
One drycleaner was identified within the project limits per the EDR database report. Koretizing (Koretizing) Dry Cleaning is located approximately 0.1 miles southwest of the Project Corridor. Koretizing is operated as a dry cleaning pick-up facility only and not considered to be a risk to the project.

Other GeoEnvironmental Concerns
Nine additional sites were identified in the EDR database report with potential GeoEnvironmental impacts to the Project. The majority of these sites were identified within the FINDS and NPDES databases. Based on further State file review and site reconnaissance, these sites are not considered to pose an impact on the Project Corridor.

Two sites, identified as Hope Mills Main (3070 N. Main Street) and Hope Mills Transformer Spill (3080 N. Main Street), appeared in the LAST database. The Hope Mills Main site had a release reported on February 5, 2008 that was subsequently closed out on February 6, 2008, indicating that the AST release was not substantial enough to warrant further action. The Hope Mills Transformer Spill was reported as a "transformer spill as a result of vandalism" in the EDR report. Review of additional files available online via the NCDEQ indicated that contaminated soil was reportedly disposed of in accordance with NCDEQ Guidelines and that no constituents were detected above their NCDEQ Standards in soil samples collected after disposal of the contaminated soil. Based on the assumed volume of material released and the distance from the Project Corridor, neither site is considered to have an impact on the project.

Anticipated Impacts
In conclusion, three (3) potential GeoEnvironmental sites of concern were identified within the Project Corridor that may warrant further assessment.

(See the table above, details below and the attached plan sheets)

Known and Potential Hazardous Material Sites

1) **Property Owner**

Fadhl Alhobishi
6428 Camden Road
Fayetteville, NC 28306

NCDOT PIN: 0404-36-7684

Former Circle K 2720358

This parcel consists of an unoccupied commercial building located on the west side of the intersection of Rockfish Road and Camden Road. This property appears in the UST, Financial Assurance, FINDS, LAST, and IMD databases. Two gasoline USTs were removed on May 24, 2016. During closure activities, soil and groundwater samples were collected. Lead was detected above its established Groundwater Quality Standard (2L Standard) in a groundwater sample collected from a temporary monitoring well. No other constituents were detected above their established criteria in soil or groundwater. A Notice of No Further Action (NFA) was issued by the NCDEQ on July 28, 2016. Three additional records (The Pantry Store #358, Pantry #3051 and The Pantry #358) were listed in the EDR report at the same address and are considered to be duplicate listings.

This site is anticipated to present high GeoEnvironmental impacts to the project.

2) **Property Owner**
McCauley & McDonald Investment Company
6454 Rockfish Road
Fayetteville, NC 28306

NCDOT PIN: 0404-36-5711
Circle K 2723009

Circle K 2723009 operates as a convenience store and retail petroleum station and is located at the east side of the intersection of Rockfish Road and Camden Road. Currently, three registered USTs (12,000-gallon capacity each) are located onsite. No releases were found in the UST database for the site; however, evidence of soil borings (patched asphalt with painted boring identification numbers) was observed in the vicinity of the UST basin during site reconnaissance on November 13, 2018.

This site is anticipated to present high GeoEnvironmental impacts to the project.

2) **Property Owner**
H&G Properties of Fayetteville, LLC
2997 Camden Road
Fayetteville, NC 28306

NCDOT PIN: 0415-00-7006
Former Pantry 3028

The site of the former Pantry 3028 is currently occupied by a multi-unit shopping center. The site is located on the northeastern corner of the intersection of Hope Mills Road and Camden Road. Five USTs (four 10,000-gallon gasoline and one 3,000-gallon kerosene) were permanently removed on June 13, 2001. Soil and groundwater contamination was detected during UST closure activities. Groundwater monitoring and remediation is ongoing at the site. According to the UST registry, one well at the former Pantry 3028 contains free product.

This site is anticipated to present high GeoEnvironmental impacts to the project.

Orphan Facilities

Facilities not plotted by EDR due to poor or inadequate address information are referred to as orphan facilities. 123 orphan facilities were listed in the EDR database report. The orphan summary was reviewed by HDR to assess their potential to pose a risk to the Project Corridor. Based on our review of the listings and information obtained during site reconnaissance, each of the orphan sites are located 0.5-miles or more beyond the Project Corridor search distance and therefore, are not anticipated to impact the project.

Closing

Please note that discovery of additional sites not recorded by regulatory agencies and not reasonably discernible during the project corridor reconnaissance may occur. The GeoEnvironmental Section should be notified immediately after discovery of such sites so their potential impact(s) may be assessed.

Please do not hesitate to contact the undersigned at 704-338-6700 if you have questions or comments regarding this Hazardous Materials Report.

Sincerely,
HDR Engineering, Inc. of the Carolinas

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-13), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E 2247-16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E 1528-14) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

Comments:	On 10/28/02 FRO received a free product recovery report for, 4 separate AFVR events. The recovery results were very poor. Of the four events, less than 4 pounds of petroleum vapors were recovered along with 2,330 gallons of water. It is time they submitted a CAP. Water is availble to the site. One active water suppy well is located 526 feet away from the site. They have not responded to SEI request to connect them to water. This is the only reason this site is High risk. /// MRP received 10/5/17 --- On 7/11/17, MW-6R contained 0.01' of product when measured. The absorbent sock within the well was noted to be in good condition and was not changed. On 9/26/17, MW-6R was gauged and no measurable product was detected. On 9/26/17, samples were collected from MW-2, MW-6R, MW-7, MW-18 & MW-19. Results were reported as MW-7 with 110 ug/l benzene and 140 ug/l naphthalene. No other compounds were reported in excess of 2L in any of the sampled MWs. On both the July and September site visits a new Biosock was installed in MW-7 to assist with NA. Consultant recommends conducting FP gauging events on MW-6R on a quarterly basis and continued maintenance of Biosocks in MW-7. Additionally, consultant recommends semi-annual groundwater monitoring using MW-6R & MW-7. FRO incident manager agrees with this assessment (KEC).

ERNEST RICKY BAREFOOT PROPERTY (Continued) **S106022514**

Comments: Preliminary assessment performed prior to acquisition by NCDOT (project U-0620) indicated that some petroleum hydrocarbon contamination existed in vicinity of AST and drums stored on site. Additional investigation completed in November 2005 found only limited soil contamination remaining and minor hits of Pb and Cr in the ground water. These exceedences NO FILE appear to be related to natural leaching of soils into the ground water.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

RCRA-CESQG: RCRA - Conditionally Exempt Small Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month.

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Inspection & Enforcement Case Listing
A complete inspection and enforcement case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations
EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

EDR Hist Cleaner: EDR Exclusive Historical Cleaners

EDR has searched selected national collections of business directories and has collected listings of potential dry cleaner sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include dry cleaning establishments. The categories reviewed included, but were not limited to dry cleaners, cleaners, laundry, laundromat, cleaning/laundry, wash & dry etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
