STORMWATER MANAGEMENT PLAN

FOR NCDOT PROJECTS

(Version 3.02; Released April 23, 2024)

WBS Element: 48647.1.1 **TIP/Proj No:** U-6187 **County(ies):** Davie

General Project Information

WBS Element:	48647.1.1	**TIP Number:**	U-6187	**Project Type:**	New Location	**Date:**	6/27/2024
NCDOT Contact:	Galen Cail			**Contractor / Designer:**	Reid Robol		
	Address: 1590 Mail Service Center Raleigh, NC 27699-1590			**Address:**	940 Main Campus Dr Ste 500 Raleigh, NC 27606		
	Phone: 919-707-6706			**Phone:**	(919) 754-5005		
	Email: gcail@ncdot.gov			**Email:**	rrobol@vhb.com		
City/Town:	Clemmons, NC			**County(ies):**	Davie		
River Basin(s):	Yadkin-Pee Dee			**CAMA County?**	No		
Wetlands within Project Limits?	Yes						

Project Description

Project Length (lin. miles or feet):	1.184 miles	**Surrounding Land Use:**	rural, forested, rural residential				
	Proposed Project			**Existing Site**			
Project Built-Upon Area (ac.)	22.2	ac.		10.5	ac.		
Typical Cross Section Description:	L - 2 @ 12' lanes w/ 4' FDPS and 6' shoulders, Y1 - 2@12' lanes with 8' shoulders including 4' FDPS with various width raised median and one right turn lane; RPB/RPC/RPD - 1@ 16' lane w/14' and 12' shoulders, LPB - 1@22' lane with 10' and 12' shoulders			L, RPB, LPB, RPC, RPD - new location, NA; Y1: 2@ 12' lanes with grassed shoulders			
Annual Avg Daily Traffic (veh/hr/day):	Design/Future:	21,200	Year: 2045	Existing:	8,100	Year:	2025

General Project Narrative: (Description of Minimization of Water Quality Impacts)

U-6187 involves the extention of SR 1630 (Baltimore Road) and construction of an interchange at I-40 on a new alignment. The project includes the extension of an existing 6'x6' RCBC on Smith Creek with a 6'x7' RCBC with sills and buried 1'; and a new location 1@14'x8' RCBC buried 1' with sills on Smith Creek under L. Avoidance and minimization measures (AMMs) have been undertaken throughout development and design of the LEDPA for the U-6187. The following provides a list of avoidance and minimization efforts made on the project:

Jurisdictional Areas

2:1 slopes with guardrails adjacent to wetlands and at pipe crossings to lessen the roadway fill and minimize impacts to streams and wetlands. Shoulder berm gutter is used at high-fill locations to capture and direct runoff at these locations, which will help reduce erosion.

I-40 Interchange

Design of the eastbound I-40 exit ramp as a stop-controlled approach instead of a free-flowing, continuous movement allowed the corner radius to be tightened and eliminated the need for a second parallel southbound lane along Baltimore Road, which reduced the impacts of Baltimore Road extension to wetlands and the Smith Creek crossing south of I-40.

Wetland Impact Minimization

The conceptual drainage layout originally consisted of a single cross pipe and ditching through wetland H near -L- STA. +/-21+00 LT. To minimize impacts to Wetland H, two cross pipes and toe protection have been used for the cross drainage in this area.

Wetland avoidance

The conceptual drainage layout originally consisted of a single Berm Ditch Outlet and cross pipe at approximately -L- 55+00 which concentrated flow and required an outfall ditch to Wetland Q. To minimize impacts to Wetland Q and maintain existing drainage patterns as much as practicable, an additional Berm Ditch Outlet and cross pipe was added at STA. 50+00 which reduced the amount of concentrated flow and allowed systems to discharge without impact to Wetland Q.
