Dear Sir,

Subject: **Application for Section 404 Nationwide Permit 33** for replacement of Bridge 121 over Densons Creek on SR 1323 (Okeewemee Rd) in Montgomery County, Federal Aid Project Number BRZ 1323 (1), State Project No. 8.2250901, Division 8, T.I.P No. B-4582.

The North Carolina Department of Transportation (NCDOT) proposes to replace bridge number 121 over Denson Creek in Montgomery County. There will be 43 feet of temporary surface water impacts. These impacts occur as a result of the usage of causeways for removal of existing bents.

Please see the enclosed copies of the Pre-Construction Notification (PCN), Stormwater Management Plan, permit drawings, and design plans for the above-referenced project. The Programmatic Categorical Exclusion (PCE) was completed in September 2008. Additional copies are available upon request.

NCDOT is the only property owner for the jurisdictional area inside the Right-Of-Way. A jurisdictional determination was made by Richard Spencer with the United States Army Corps of Engineers (USACE) on March 1, 2007. However, Mr. Spencer did not issue a written jurisdictional determination.

This project calls for a letting date of January 18, 2011 and a review date of November 30, 2010. However, the let date may advance as additional funds become available.

ROADWAY DESCRIPTION

The project involves the replacement of Bridge No. 121 on SR 1323 over Densons Creek. The overall length of the project with approach work is approximately 775 feet. The proposed bridge will consist of 1 @ 75' and 1 @ 90' box beams. The project drainage systems consist of the bridge and associated bridge end drains. There is only one side ditch proposed.

ENVIRONMENTAL DESCRIPTION

The project is located in the Yadkin River Basin. Currently, there are no buffer rules for this river basin. The project will have one (1) crossing of a jurisdictional stream that will impact Densons Creek. Densons Creek classified as Class C. Densons Creek and the adjacent Suck Branch are not listed on NCDWQ's 303d list. No wetlands will be impacted by the proposed project.

BEST MANAGEMENT PRACTICES AND MAJOR STRUCTURES

The primary goal of Best Management Practices (BMPs) is to prevent degradation of the states surface waters as a result of the location, construction and operation of the highway system. BMPs are activities, practices and procedures taken to prevent or reduce stormwater pollution. There are no BMPs used on this project.

At all the sites, stormwater will be treated and non-erosive velocities will be achieved where practicable.

MINIMIZATION OF IMPACTS

Several design elements provided for minimization of wetland impacts. Bridge end drains are located outside wetland areas. Also, the bridge was lengthened to minimize impacts to the adjacent Suck Branch.
