Asheville, NC 28801-5006

ATTN: Mr. Steve Lund
NCDOT Coordinator

Subject: **Application for Individual Section 404 and 401 permits for R-2320G** for the proposed extension of US 52 from the existing intersection of NC 24-27-73, NC 138, and US 52 to the existing intersection of SR 1785 (Johns Road) and US 52 in Albemarle, Stanly County; NCDOT Division 10. Federal Project No. NHF-52(10), State Project No. 8.1680401; TIP No. R-2320G. Debit $570.00 from WBS Element No. 34422.1.1

Dear Sir:

The North Carolina Department of Transportation (NCDOT) proposes to extend US 52. The project begins along US 52 approximately 0.5 mile north of SR 1785 (Johns Road) (southern terminus) and extends northward on new location and along existing NC 138 to the intersection of NC 24-27-73, NC 138, and US 52 (northern terminus). Two typical sections are identified for the proposed extension of US 52. At the northern project terminus, a five-lane curb and gutter typical section is used along NC 138 south of the intersection of NC 24-27-73 and existing US 52. A four-lane divided typical section is used along the new location portion of the project and along existing US 52 at the southern terminus. The length of the proposed US 52 Extension project is approximately 3.5 miles. A right-of-way minimum width of 100 feet is needed for the five-lane typical section, and a minimum width of 200 feet is needed for the four-lane typical section.

This application package consists of the cover letter, ENG Form 4345, North Carolina Department of Environment and Natural Resources, Ecosystem Enhancement Program (EEP) mitigation acceptance letter, US Fish & Wildlife Service (USFWS) Concurrence letter, permit drawings, and roadway plan sheets.

TELEPHONE: 919-715-1334 or
919-715-1335

FAX: 919-715-5501

WEBSITE: WWW.NCDOT.ORG

LOCATION:
PARKER LINCOLN BUILDING
2728 CAPITAL BLVD. SUITE 240
RALEIGH NC 27604

Project Schedule: The Review Date and the Let Date for the project are April 1, 2008 and May 20, 2008, respectively.

Purpose and Need: As identified in the EA, the purpose of the project is to connect two sections of US 52 that are separated by approximately 0.25 mile of NC 24-27-73. The proposed improvements eliminate turning movements between US 52 and NC 24-27-73 (an "offset intersection") that are required by the current separation. Other factors contributing to the need of the project are increases in the capacity of the highway and safety improvements for roadway users.

Summary of Permanent Impacts: Permanent impacts to jurisdictional areas of the proposed project consist of a total of 948 linear feet of stream impacts and 0.19 acre of surface water (pond) impact.

Summary of Temporary Impacts: Temporary impacts to jurisdictional areas of the proposed project consist of a total of 0.03 acre of stream impacts.

Utility Impacts: There will be no jurisdictional resources impacted from utilities.

Summary of Mitigation: The project has been designed to avoid and minimize impacts to jurisdictional areas throughout the NEPA and design processes. Compensatory mitigation for the 948 linear feet of permanent impact to jurisdictional streams will be provided by EEP.

NEPA DOCUMENT STATUS

An Environmental Assessment (EA) was submitted by NCDOT on November 27, 2000 for R-2320G in compliance with the National Environmental Policy Act. The document addressed the extension of US 52 from the existing intersection of NC 24-27-73, NC 138, and US 52 to the existing intersection of SR 1785 (Johns Road) and US 52. The EA explains the purpose and need for the project; provides a description of the alternatives considered; and characterizes the social, economic, and environmental effects. After the EA was approved it was circulated to federal, state, and local agencies. On March 12, 2003 a FONSI was approved for R-2320G. Copies of the EA and FONSI have been provided to regulatory review agencies involved in the approval process. Additional copies will be provided upon request.

INDEPENDENT UTILITY

The subject project is in compliance with 23 CFR Part 771.111(f) which lists the Federal Highway Administration (FHWA) characteristics of independent utility of a project:

(1) The project connects logical termini and is of sufficient length to address environmental matters on a broad scope,

(2) The project is usable and a reasonable expenditure, even if no additional transportation improvements are made in the area;
(3) The project does not restrict consideration of alternatives for other reasonably foreseeable transportation improvements.

RESOURCE STATUS

All project waters are located within the Yadkin-Pee Dee River Basin and within USGS Hydrologic Unit 03040105.

Jurisdictional Status

Three (3) jurisdictional streams and one (1) surface water (pond) are located on the project. Rock Creek (Stream Index No. 13-17-31-1-3-1) and the two unnamed tributaries to Rock Creek are classified as C waters. Rock Creek is not included on the 2006 303(d) list of impacted streams. Jurisdictional impacts are reported in Table 1.

Potential wetland communities were investigated pursuant to the 1987 Corps of Engineers Wetland Delineation Manual. Jurisdictional determinations for wetlands and streams were verified by Steve Lund of the U.S. Army Corps of Engineers on October 31, 2001. Pete Colwell of the N.C. Division of Water Quality (DWQ) and Mary Ellen Haggard of the N.C. Wildlife Resources Commission (WRC) also attended the field review. There are no jurisdictional wetlands located on the project.

Table 1. Jurisdictional Impacts for TIP Project R-2320G, Stanly County.

Site	Station No. (from/to)	Structure Size/ Type	Stream Impacted	Pond Impacts (acres)	Permanent Stream Impacts (lf)	Temporary Stream Impacts (ac)
1	-L- 94+00 to 95+25	Roadway fill	pond	0.19	-	-
2	-L- 118+00 to 120+50	3 @ 8′x 8′ RCBC	Rock Creek	-	469	0.02
3	-L- 137+95	60″ RCP	UT to Rock Creek	-	414	< 0.01
4	-Y4- 9+10	10′x 9′ RCBC	UT to Rock Creek	-	65	0.01
Total				0.19	948	0.03

Impacts to Waters of the United States

Site 1 (Permit Drawing Sheet 7 of 18) -L- 94+00 to 95+25:
To accommodate the new road and drainage features, the pond will be filled.
Permanent Impacts: 0.19 acre of surface water impact
Temporary Impacts: 0 acre

Site 2 (Permit Drawing Sheet 9 of 18) -L- 118+00 to 120+50:
An approximately 224-foot long, triple barrel 8′ x 8′ Reinforced Concrete Box Culvert (RCBC) will be installed for the Rock Creek crossing. The orientation of the RCBC,

along with the inlet and outlet channels, was selected to allow for future extension of the culvert in a straight line for unobstructed flow. The permanent impacts are due to the filling of a portion of the existing stream channel, with the stream flow directed through the RCBC and the adjacent 40-foot long inlet channel and 205-foot long outlet channel. The temporary impacts are to the existing stream from tying in the inlet and outlet channels.

Permanent Impacts: 469 linear feet of stream impact
Temporary Impacts: 0.02 acre of temporary stream impact

Site 3 (Permit Drawing Sheet 11 of 18) -L- 137+95:
An approximately 320-foot long, 60″ Reinforced Concrete Pipe (RCP) will be installed for the crossing of an unnamed tributary to Rock Creek by both the new road and Service Road 3. The RCP will convey water from the south side of the new road to the north side of Service Road 3 as a single conveyance structure. The permanent impacts are from the installation of the 60″ RCP. The temporary impacts are to the existing stream during RCP installation.

Permanent Impact: 414 linear feet of stream impact
Temporary Impact: <0.01 acre of temporary stream impact

Site 4 (Permit Drawing Sheet 13 of 18) -Y4- 9+10:
In order to connect Southside Road (SR 1906) to the project, an existing 60″ Corrugated Metal Pipe (CMP) located in an unnamed tributary to Rock Creek will be replaced with a 10′ X 9′ Reinforced Concrete Box Culvert (RCBC). The permanent impacts are due to the filling of a portion of the existing stream channel and the installation of the RCBC. The temporary impacts are to the existing stream during RCBC installation.

Permanent Impacts: 65 linear feet of stream impact
Temporary Impacts: 0.01 acre of temporary stream impact

FEDERALLY PROTECTED SPECIES

Plants and animals with Federal classifications of Endangered (E), Threatened (T), Proposed Endangered (PE) and Proposed Threatened (PT) are protected under provisions of Sections 7 and 9 of the Endangered Species Act (ESA) of 1973, as amended. The current USFWS listing of federally protected species for Stanly County, dated May 5, 2007, is shown in Table 2.

Table 2. Federally Protected Species for Stanly County

Common Name	Scientific Name	Status	Biological Conclusion
Bald eagle	*Haliaeetus leucocephalus*	Delisted*	Not Applicable
Schweinitz's sunflower	*Helianthus schweinitzii*	Endangered	May Effect, Not Likely to Adversely Affect

* The bald eagle was delisted on August 8, 2007. Note that the current USFWS listing (dated May 5, 2007) still lists the bald eagle as Threatened.

The bald eagle has been delisted as of August 8, 2007 from the Endangered Species Act. The bald eagle will still be protected under the Bald and Golden Eagle Protection Act. Within the project area, there is no suitable nesting habitat in the form of large trees with a clear flight path to water. In addition, there are no water resources of sufficient size to provide foraging habitat for the bald eagle within the project vicinity. Therefore, this project will have No Effect on the bald eagle.

During the September 1999 surveys of suitable habitat for the Schweinitz's sunflower within the proposed alignments, no specimens of the federally endangered plants were identified; therefore a No Effect biological conclusion was included in the EA. However, during subsequent field surveys in November 2003, Schweinitz's sunflower was identified within the proposed construction limits of the preferred alternative. In March 2004, a field review of the alternative and the Schweinitz's sunflower population was conducted with NCDOT biologist Karen Lynch, USFWS representative Marella Buncick, and NCDOT Division 10 Environmental Officer Larry Thompson. As a result of the meeting, the alternative was redesigned and shifted to avoid impact to the Schweinitz's sunflower. The Schweinitz's sunflower population was incorporated into the project right-of-way (see Plan Sheet 6). NCDOT attempted, but was unable to acquire an additional 50-foot radius around the Schweinitz's sunflower population due to the landowner's denial. Because a small population of Schweinitz's sunflower was found within the proposed right-of-way, the biological conclusion in the Environmental Assessment was changed from "No Effect" to "May Affect, Not Likely to Adversely Affect".

On August 28, 2007, NCDOT biologists conducted a survey of all areas of suitable habitat along the project corridor. No populations of Schweinitz's sunflower were observed, including the populations previously identified that were incorporated within the project's right-of-way. A concurrence request letter, dated September 11, 2007, was submitted to the USFWS. In a letter dated September 25, 2007, the USFWS concurred with the "May Affect, Not Likely to Adversely Affect" biological conclusion for Schweinitz's sunflower (letter attached).

INDIRECT AND CUMULATIVE IMPACT ANALYSIS

Existing rules for the 401 Water Quality Certification Program [15A NCAC 2H.0506(b)(4)] require that the DWQ determine that a project "does not result in cumulative impacts, based on past or reasonably anticipated future impacts, that cause or will cause a violation of downstream water quality standards."

The Qualitative Indirect and Cumulative Effects (ICE) Assessment, dated March 22, 2005, is summarized below.

Consideration of Indirect Effects: This project will primarily assist local traffic movements and not provide a high speed commuting corridor with new access to undeveloped lands. Population growth and market demand for developable land in this area is low. These conditions, as well as the lack of public utilities throughout the

majority of the GISA (Growth Impact Study Area), should limit the potential for land use change as a result of TIP R-2320G. Most growth in Stanly County is still expected to occur in the western portion of the county closer to Charlotte and I-485. Because TIP R-2320G is only 3.0 miles in length and the speed limit is not proposed to substantially change, travel times savings related to improved accessibility and mobility will be relatively minor. Additionally, the project is not intended to serve any explicit economic development purpose or a specific development.

Study Area Trends and information: Lake Tillery Water Supply Watershed-IV protected area covers the southeast portion of the growth impact study area. Within the WS-IV protected area, development is limited to two dwelling units per acre or 24% built-upon area. The Watershed Protection Ordinance of Stanly County requires a 35-foot vegetative buffer along all perennial waters. There are no High Quality Waters, Outstanding Resource Waters, or 303(d) impaired water bodies within the GISA.

Consideration of Cumulative Effects: When combined with TIP R-2320A-F, the widening of US 52 from US 74 to the southern terminus of TIP R-2320G, the two projects may improve regional mobility and accessibility from Wadesboro to Albemarle. Growth influence would mainly come in the form of commercial and industrial uses with improved access to one of the major north-south routes (I-85) and east-west routes (US 74, soon to be I-74) in North Carolina. Cumulative effects could also result from TIP R-2320G when it considered with TIP R-967, the widening of NC 24/27/73 to four lanes from the western city limits of Locust to the western city limits of Albemarle. These two projects combined may create development opportunities south of NC 24/27/73 for commuters from the Albemarle area to I-485 and Charlotte. As the market for development is slow, there are few other non-transportation projects (major developments, planned public facilities/utilities, etc.) under construction or planned within the GISA that could contribute to a higher level of potential cumulative effects associated with TIP R-2320G.

Based on the findings and conclusions of this report as they relate to the low potential for land use change and existing environmental conditions/regulations, any indirect and cumulative effects resulting from TIP R-2320G have a low potential of impacting water quality throughout the GISA.

The full report on the Indirect & Cumulative effects of R-2320-G is available at NCDOT's Community Studies Unit.

CULTURAL RESOURCES

Archaeology & Historical Structures: On April 22, 1998, the SHPO indicated that there are no known archaeological sites within the proposed project area. Based on the SHPO's knowledge of the project area, it was determined that it was unlikely that any archaeological resources which may be eligible for inclusion in the National Register of Historic Places would be affected by the project construction. Archaeological resource survey work was conducted to determine if significant archaeological resources might be disturbed. Therefore, the SHPO recommended that no archaeological investigation be

conducted in connection with this project. The SHPO concurrence letter is found in Appendix 4 in the EA.

An historic architectural survey for structures listed in or eligible for listing in the National Register of Historic Places was conducted in the project area. No properties in the project area are listed in the National Register; however, two properties were determined to be eligible: Rock Creek Park and Hatley Farm. On June 15, 2000, representatives of the FHWA, SHPO, and NCDOT reviewed the impacts proposed to Rock Creek Park and Hatley Farm and concurred that the Alternative 5 (the preferred and designated alternative) had no effect on these properties. The concurrence form for the assessment of effects is located in Appendix 4 in the EA. The shift in Alignment 5 to avoid impacts to the Schweinitz's sunflower population did not alter the no effect determination for these properties.

FEMA COMPLIANCE

Stanly County is currently a participant in the National Flood Insurance Regulatory Program. The proposed stream crossings are not located in any detailed flood study or flood hazard areas. The floodplain areas at the major stream crossings are wooded and rural.

MITIGATION OPTIONS

The Army Corps of Engineers has adopted, through the Council on Environmental Quality (CEQ), a wetland mitigation policy that embraces the concept of "no net loss of wetlands" and sequencing. The purpose of this policy is to restore and maintain the chemical, biological, and physical integrity of the waters of the United States. Mitigation of wetland and surface water impacts has been defined by the CEQ to include: avoiding impacts, minimizing impacts, rectifying impacts, reducing impacts over time and compensating for impacts (40 CFR 1508.20). Executive Order 11990 (Protection of Wetlands) and Department of Transportation Order 5660.1A (Preservation of the Nations Wetlands), emphasize protection of the functions and values provided by wetlands. These directives require that new construction in wetlands be avoided as much as possible and that all practicable measures are taken to minimize or mitigate impacts to wetlands.

Avoidance & Minimization: The NCDOT is committed to incorporating all reasonable and practicable design features to avoid and minimize jurisdictional impacts, and to provide full compensatory mitigation of all remaining, unavoidable jurisdictional impacts. Avoidance measures were taken during the planning and NEPA compliance stages, and minimization measures were incorporated as part of the project design.

The following site-specific measures were employed by NCDOT during design of this project to avoid/minimize impacts to waters of the U.S.:

- Of the five alternatives presented in the EA, the alternative selected had the least impact upon jurisdictional waters of the U.S. The preferred alternative avoided impacts to wetlands and had the least extent of stream impact.

- In areas where stream crossings were unavoidable, the crossings were kept as close to perpendicular as practicable with fill slopes of 2:1.
- The shoulder section design provides grassy swale treatment of the roadway runoff throughout most of the project in order to provide treatment of runoff before its discharge into receiving streams.
- Curb and gutter was utilized only where the project ties to existing NC 138 (Aquadale Road), where curb and gutter was previously utilized.
- The Reinforced Concrete Box Culvert at Site 2 will be buried one foot below the streambed to allow for natural aquatic passage. Sills will be placed in the barrels to create a low flow channel and control the width of the channel at the inlet and outlet.
- The Reinforced Concrete Pipe at Site 3 will be buried one foot below the streambed to allow for natural aquatic passage. Class 1 riprap will be placed along both banks of the stream, extending 20 feet from the outlet to minimize bank erosion. No riprap will be placed in the bottom of the channel.
- The proposed stream crossing at Site 4 occurs at an existing crossing. The existing 60″ CMP will be replaced with a 9′ X 10′ RCBC to allow better hydraulic connection. In addition, the current design speed has been maintained, rather than increased, which allows for a shorter structure with reduced fill. Therefore, the potential impacts to the stream have been minimized.
- The proposed alignment has been redesigned and shifted to avoid impacts to a Schweinitz's sunflower population that was identified within the original alignment.
- Additionally, the Schweinitz's sunflower population was incorporated into the project right-of-way.
- There is controlled-access on the majority of the new location portion of this project, which will limit development.
- Impacts to a Significant Natural Heritage Area, the Union Chapel Enon Knolls, have been avoided.

The NCDOT's guidelines for Best Management Practices for the Protection of Surface Waters will be enforced throughout the duration of the project construction to minimize impacts to waters of the U.S.

Compensation: The primary emphasis of the compensatory mitigation is to reestablish a condition that would have existed if the project were not built. As previously stated, mitigation is limited to reasonable expenditures and practicable considerations related to highway operation. Compensatory actions often include restoration, creation, and enhancement of waters of the United States.

The necessary compensatory mitigation to offset unavoidable impacts to waters that are jurisdictional under the federal Clean Water Act will be provided by EEP within the same 8-digit cataloguing unit. Pursuant to the letter dated August 21, 2007, compensatory stream mitigation will be provided by EEP in accordance with Section X of the Amendment No. 2 to the Memorandum of Agreement between the N.C. Department of Environment and Natural Resources, NCDOT, and the USACE, fully executed on March 8, 2007 (Tri-Party MOA) (letter attached). EEP will provide mitigation for 948 linear

feet of impacts to warm water streams. The EEP has also sent an Acceptance Letter (dated August 21, 2007) to the USACE on which the DWQ was copied.

REGULATORY APPROVALS

Application is hereby made to the Department of the Army for a Section 404 Individual Permit and to the DWQ for an Individual Section 401 Water Quality Certification for the above-described activities. In compliance with Section 143-215.3D(e) of the NCAC, we will provide $570.00 to act as payment for processing the Section 401 permit application previously noted in this application (see Subject line). We are providing five copies of this application to the North Carolina Department of Environment and Natural Resources, Division of Water Quality. **The NCDOT requests a permit expiration date of ten (10) years from date of issue to allow for completion of project construction.**

A copy of this application will be posted on the NCDOT website at http://www.ncdot.org/doh/preconstruct/pe/neu/permit.html.

Thank you for your assistance with this project. If you have any questions or need additional information, please contact Bill Barrett at wabarrett@dot.state.nc.us or (919) 715-1624.

Sincerely,

E. L. Lusk

APPLICATION FOR DEPARTMENT OF THE ARMY PERMIT
(33 CFR 325)

OMB APPROVAL NO. 0710-003
Expires December 31, 2004

Public reporting burden for this collection of information is estimated to average 10 hours per response, although the majority of applications should require 5 hours or less. This includes the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Department of Defense, Washington Headquarters Service Directorate of Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington, VA 22202-4302; and to the Office of Management and Budget, Paperwork Reduction Project (0710-0003), Washington, DC 20503. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to any penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number. Please DO NOT RETURN your form to either of those addresses. Completed applications must be submitted to the District Engineer having jurisdiction over the location of the proposed activity.

PRIVACY ACT STATEMENT

Authority: Rivers and Harbors Act, Section 10, 33 USC 403: Clean Water Act, Section 404, 33 USC 1344; Marine Protection, Research and Sanctuaries Act, 33 USC 1413, Section 103. Principal Purpose: Information provided on this form will be used in evaluating the application for a permit. Routine Uses: This information may be shared with the Department of Justice and other federal, state, and local government agencies. Submission of requested information is voluntary, however, if information is not provided the permit application cannot be evaluated nor can a permit be issued.

One set of original drawings or good reproducible copies which show the location and character of the proposed activity must be attached to this application (see sample drawings and instructions) and be submitted to the District Engineer having jurisdiction over the location of the proposed activity. An application that is not completed in full will be returned.

11. STATEMENT OF AUTHORIZATION

I hereby authorize, _____ to act in my behalf as my agent in the processing of this application and to furnish, upon request, supplemental information in support of this permit application.

APPLICANT'S SIGNATURE _____ DATE _____

NAME, LOCATION, AND DESCRIPTION OR PROJECT OR ACTIVITY

12. PROJECT NAME OR TITLE (see instructions)

R-2320 G, The extension of US 52 from the existing intersection of NC 24-27-73, NC 138, and US 52 to the existing intersection of SR 1785 (Johns Road).

13. NAME OF WATERBODY, IF KNOWN (if applicable)

Rock Creek and two UTs of Rock Creek

14. PROJECT STREET ADDRESS (if applicable)

The project begins along US 52 in Albemarle approximately 0.5 miles north of SR 1785

15. LOCATION OF PROJECT

Stanly (COUNTY) NC (STATE)

16. OTHER LOCATION DESCRIPTIONS, IF KNOWN (see instructions) **Section, Township, Range, Lat/Lon, and/or Accessors's Parcel Number, for example.**

17. DIRECTIONS TO THE SITE

Please see attached permit drawings.

18. Nature of Activity (Description of project, include all features)

Road extension, approximately 3.5 miles, on new location.

19. Project Purpose (Describe the reason or purpose of the project, see instructions)

Public transportation; connect two sections of US 52 that are separated by approximately 0.25 mile of NC 24-27-73; eliminate turning movements between US 52 and NC 24-27-73; improve traffic flow and increase safety.

USE BLOCKS 20-22 IF DREDGED AND/OR FILL MATERIAL IS TO BE DISCHARGED

20. Reason(s) for Discharge

R-2320 G, The extension of US 52 from the existing intersection of NC 24-27-73, NC 138, and US 52 to the existing intersection of SR 1785 (Johns Road).

21. Type(s) of Material Being Discharged and the Amount of Each Type in Cubic Yards

Earthen fill material, box culverts

22. Surface Area in Acres of Wetlands or Other Waters Filled (see instructions)

Rock Creek = 469 linear feet perennial stream
UTs of Rock Creek = 479 linear feet of perennial stream
Isolated, non-jurisdictional surface water (pond) = 0.19 acre
Wetlands = no wetland impacts

23. Is Any Portion of the Work Already Complete? Yes ___ No _X_ IF YES, DESCRIBE THE COMPLETED WORK

24. Addresses of Adjoining Property Owners, Lessees, Etc., Whose Property Adjoins the Waterbody (If more than can be entered here, please attach a supplemental list).

Please see the attached Sheet 3 of 18 in the permit drawing package.

25. List of Other Certifications or Approvals/Denials Received from other Federal, State, or Local Agencies for Work Described in This Application.

-None-

* Would include but is not restricted to zoning, building, and flood plain permits

26. Application is hereby made for a permit or permits to authorize the work described in this application. I certify that the information in this application is complete and accurate. I further certify that I possess the authority to undertake the work described herein or am acting as the duly authorized agent of the applicant.

E. P. Fuel — 10-12-07

SIGNATURE OF APPLICANT | DATE | SIGNATURE OF AGENT | DATE

The application must be signed by the person who desires to undertake the proposed activity (applicant) or it may be signed by a duly authorized agent if the statement in block 11 has been filled out and signed.

18 U.S.C. Section 1001 provides that: Whoever, in any manner within the jurisdiction of any department or agency of the United States knowingly and willfully falsifies, conceals, or covers up any trick, scheme, or disguises a material fact or makes any false, fictitious or fraudulent statements or representations or makes or uses any false writing or document knowing same to contain any false, fictitious or fraudulent statements or entry, shall be fined not more than $10,000 or imprisoned not more than five years or both.

Ecosystem Enhancement
PROGRAM

August 21, 2007

Mr. Gregory J. Thorpe, Ph.D.
Environmental Management Director
Project Development and Environmental Analysis Branch
North Carolina Department of Transportation
1548 Mail Service Center
Raleigh, North Carolina 27699-1548

Dear Dr. Thorpe:

Subject: EEP Mitigation Acceptance Letter:

R-2320G, Albemarle – US 52 Extension from the Intersection of US 52/ NC73/NC 24/27 and NC 138 to the Intersection of US 52 and SR 1785 (Johns Road), Stanly County

The purpose of this letter is to notify you that the Ecosystem Enhancement Program (EEP) will provide the compensatory stream mitigation for the subject project. Based on the information supplied by you on August 7, 2007, the impacts are located in CU 03040105 of the Yadkin River Basin in the Southern Piedmont (SP) Eco-Region, and are as follows:

Warm Stream: 948 feet

EEP commits to implementing sufficient compensatory stream mitigation to offset the impacts associated with this project by the end of the MOA Year in which this project is permitted, in accordance with Section X of the Amendment No. 2 to the Memorandum of Agreement between the North Carolina Department of Environment and Natural Resources, the North Carolina Department of Transportation, and the U. S. Army Corps of Engineers, fully executed on March 8, 2007. If the above referenced impact amounts are revised, then this mitigation acceptance letter will no longer be valid and a new mitigation acceptance letter will be required from EEP.

If you have any questions or need additional information, please contact Ms. Beth Harmon at 919-715-1929.

Sincerely,

James B. Stanfill for

William D. Gilmore, P.E.
EEP Director

Mr. Phil S. Harris, III, PE
Manager, Natural Environment Unit
North Carolina Department of Transportation
1598 Mail Service Center
Raleigh, North Carolina 27699-1598

Dear Mr. Harris:

Subject: Endangered Species Concurrence for the Proposed Extension of US 52 from the Existing Intersection of NC 24-27-73, NC 138, and US 52 to the Existing Intersection of SR 1785 (Johns Road) and US 52 in Albemarle, Stanly County, North Carolina, TIP No. R-2320G, Federal Aid Project No. NHF-52(10), WBS Element No. 344221.1

As requested by the North Carolina Department of Transportation (NCDOT), we have reviewed the natural resources information and the biological conclusion for federally protected species for the subject project. We provide the following comments in accordance with the provisions of section 7 of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531-1543) (Act).

The NCDOT proposes to extend US 52 for approximately 3.5 miles from the existing intersection of NC 24-27-73, NC 138, and US 52, just south of Albemarle, to the existing intersection of SR 1785 (Johns Road) and US 52. The northern section will follow existing NC 138, and the southern portion will be on new location.

In several successive surveys conducted since 1999, federally endangered Schweinitz's sunflower (*Helianthus schweinitzii*) plants were located within the right-of-way of the preferred alternative--Alternative 5. Through discussions with Roadway Design and with some design revisions, it was determined that the plants could be avoided during project implementation. In a final survey conducted on August 22, 2007, no plants were located in the areas where they occurred previously. Their absence could be attributed to the current drought, but the specific cause wasn't obvious. Although the plants were not located in the latest survey, the area of suitable habitat will be fenced to protect the site during construction and will be maintained in the NCDOT right-of-way after construction is completed. If the plants reappear in the future, the NCDOT has committed to manage this area as a roadside rare plant population, including the installation of "No Mowing" signs where appropriate.

Given the avoidance of the previous plant locations and current suitable habitat and future protection for the site, we can concur with your conclusion that this project is "not likely to adversely affect" Schweinitz's sunflower. We believe the requirements under section 7(c) of the Act are fulfilled for this species. However, obligations under section 7 of the Act must be reconsidered if: (1) new information reveals impacts of this identified action that may affect listed species or critical habitat in a manner not previously considered, (2) this action is subsequently modified in a manner that was not considered in this review, or (3) a new species is listed or critical habitat is determined that may be affected by the identified action.

If you have questions about these comments please contact Ms. Marella Buncick of our staff at 828/258-3939, Ext. 237. In any future correspondence concerning this project, please reference our Log Number 4-2-98-099.

Sincerely,

Brian P. Cole
Field Supervisor

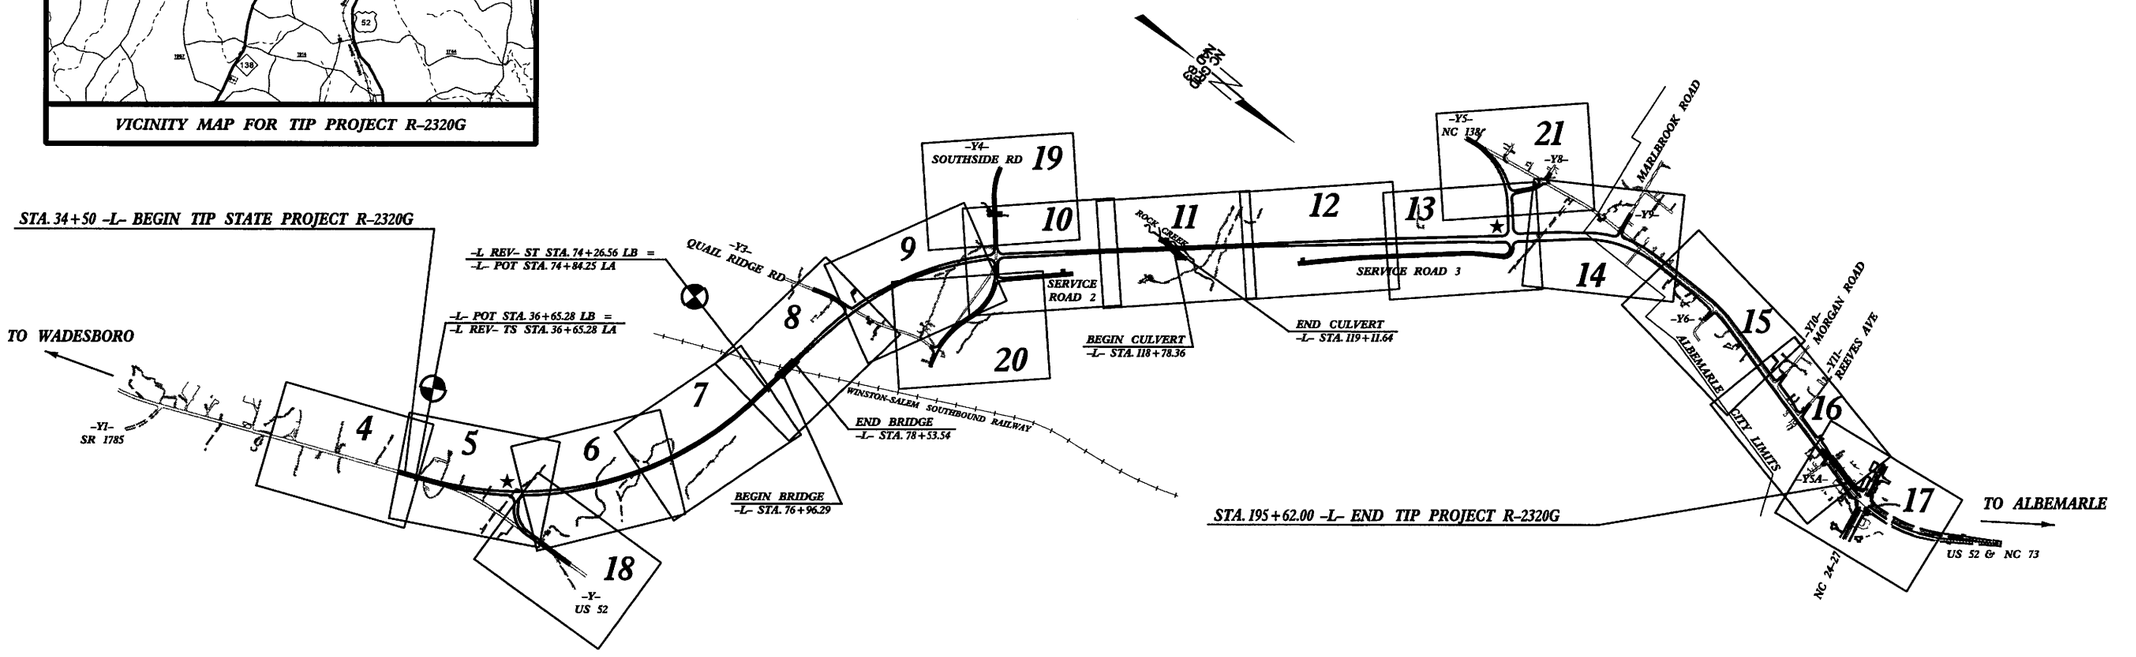
90% REVIEW PLANS 11/22/2005

LOCATION: *Albemarle – US 52 Extension from the Intersection of US 52, NC 73, NC 24–27 & NC 138 to Intersection of US 52 and SR 1785 (Johns Road)*

TYPE OF WORK: *Grading, Drainage, Paving, Curb & Gutter Structures, Signing and Signals*



A PORTION (0.6 MILES) OF THIS PROJECT IS WITHIN THE MUNICIPAL BOUNDARIES OF ALBEMARLE.

NCDOT CONTACT: CATHY S. HOUSER, P.E., ROADWAY DESIGN – ENGINEERING COORDINATION

THIS IS A PARTIAL CONTROLLED–ACCESS PROJECT WTIH ACCESS BEING LIMITED TO POINTS AS SHOWN ON THE PLANS.

CLEARING ON THIS PROJECT SHALL BE PERFORMED TO THE LIMITS ESTABLISHED BY METHOD II.
