ATTN: Mr. David E. Bailey
NCDOT Coordinator

Subject: **Application for Individual Section 404 Permit, Section 401 Water Quality Certification, and Riparian Buffer Certification for** U.S. 29 Interchange Improvements at SR 2790 (Eckerson Road)/SR 2526 (Summit Avenue) in Greensboro, Guilford County, Federal Aid Project No. NHS-2526(3), Division 7, TIP No. R-4707, Debit $570 from WBS 36599.1.5.

Dear Sir:

The North Carolina Department of Transportation (NCDOT) proposes to replace on new location the existing deficient Bridge No. 360 that connects Reedy Fork Parkway (SR 4771) to SR 2526 (Summit Avenue), west of US 29 and construct a new interchange for Reedy Fork Parkway over US 29 on new location to the south of the existing interchange. The improvements would also include upgrades to Summit Avenue from 0.2 mile south of Bryan Park Road to the proposed interchange, and enhancements to Reedy Fork Parkway from SR 2790 (Eckerson Road) to Summit Avenue. Please see the enclosed ENG 4345; North Carolina Division of Mitigation Services (NCDMS) Acceptance Letter, Meeting Minutes – Concurrence Points 4B and 4C; State Stormwater Management Plan (SMP); permit drawings; and Roadway plansheets.

Purpose and Need:

The purpose of the proposed project is to replace the structurally deficient bridge over US 29, improve the interchange to meet interstate standards and accommodate future traffic volumes from the Reedy Fork Ranch Mixed Use Development. The needs that the proposed project would address are summarized:

- Replacement of the structurally deficient bridge (No. 360) over US 29;
- Modification of the existing US 29/ Reedy Fork Parkway Interchange to meet interstate standards to accommodate for the future re-designation of US 29 to I-785;
- Accommodation of the future traffic volumes from the Reedy Fork Ranch development and other anticipated future developments in the study areas.

NEPA DOCUMENT STATUS

State Environmental Analysis (EA)/Finding of No Significant Impact was completed for R-4707 on February 20, 2018.

Copies of this document can be found on the NCDOT Website: https://xfer.services.ncdot.gov/pdea/EnvironmentalDocs/Documents/STIP_R-Projects/R4707%20SEA_FONSI_Final.pdf.

PROJECT SCHEDULE

This project has a letting date of June 16, 2020 and a review date April 28, 2020.

INDEPENDENT UTILITY

The Merger Team agreed on the purpose and need, logical termini, and independent utility of the proposed project at a meeting in 2006. The Study Area for the project extends approximately 5,000 feet north of the existing interchange along US 29 and approximately 3,000 feet south along US 29, Bryan Park Road and SR 2525 (Summit Avenue). The Study Area also extends approximately 3,000 feet south along SR 2790 (Reedy Fork Parkway).

RESOURCE STATUS

Water resources in the Study Area are part of the Cape Fear River basin [US Geological Survey (USGS) Hydrologic Unit 03030002] and are located within the Jordan Water Supply Buffer Protection. There are no Outstanding Resource Waters (ORW), High Quality Waters (HQW), Water Supply Waters (WS-I or WS-II) waters within 1.0 mile of the project area.

A Preliminary Jurisdictional Determination (PJD) was obtained on November 15, 2017 for the R-4707 project. David Bailey with the US Army Corps of Engineers (USACE) and April Norton with the NC Division of Water Resources (NCDWR) attended the field visit on October 17, 2017.

303(d) Impaired Waters:

The Final 2018 303(d) list includes Reedy Fork (Hardys Mill Pond) which is listed for benthos but not listed for turbidity or sedimentation. No other streams are listed within one mile of the project footprint.

IMPACTS TO WATERS OF THE U.S.

Tables 1 and 2 summarize the impacts to jurisdictional wetlands and streams, respectively. Site numbers correspond with the permit (hydraulic) drawings included in this application and with the PJD package, dated June 19, 2017, and with the updated PJD tables, dated November 15, 2017.

Table 1 – R-4707 Wetland Impacts*

Permit Site / Wetland ID[1/]	NC WAM Classification	Wetland Size (ac)	Perm. Fill in Wetlands (ac)	Excavation (ac)	Mechanized Clearing (ac)	Impact Description
2 / WF	Headwater Forest	0.02	<0.01	--	<0.01	A portion of wetland WF will be impacted by fill from the road widening. Mechanized clearing will be performed on a portion of the wetland outside of the fill boundary.
4/ WJ	Headwater Forest	0.55	0.34	0.02	0.15	Wetland WJ will be impacted by fill and excavation from the construction of the interchange along with the installation of a preformed scour hole. Mechanized clearing will be performed on a portion of the wetland outside of the fill boundary.
6/WI	Non-Tidal Freshwater Marsh	0.02	--	0.02	--	Wetland WI is being impacted by the channel relocation of the UT to Camp Herman and will be a total take.
Totals by Impact Type:			**0.35**	**0.04**	**0.16**	
Total Permanent Wetland Impacts:			**0.55**			

* Wetlands impacted are riparian.

Table 1A – R-4707 Utility Wetland Impacts*

Permit Site / Wetland ID[1/]	NC WAM Classification	Wetland Size (ac)	Perm. Fill in Wetlands (ac)	Excavation (ac)	Mechanized Clearing (ac)	Impact Description
4/ WJ	Headwater Forest	0.55	--	--	<0.01	Wetland WJ will be impacted by mechanized clearing from the installation of overhead utilities.
Totals by Impact Type:			--	--	**0.01**	
Total Permanent Wetland Impacts:			**0.01**			

* Wetlands impacted are riparian.

Table 2 – R-4707 Stream Impacts

Permit Site	Stream Name/ PJD ID	Stream Status*/ Class	Permanent Channel Impacts	Bank Stabilization	Temp. Channel Impacts	ACOE Required Mitigation	DWR Required Mitigation	Permanent Impacts Description
1	UT to UT at Camp Herman/SI	I/WS-V ;NSW	79	10	10	79	--	Stream will be impacted by roadway fill with the flow captured in a new 24" RCP III in the location of the original channel, with bank stabilization at the outlet of the pipe.
3A	UT at Camp Herman/SD	P/WS-V ;NSW	314	73	5	314	314	Stream will be impacted by the extension of a triple barrel 7'x 8' RCBC with bank stabilization and a low flow bench at the inlet.
3B	UT at Camp Herman/SD	P/WS-V ;NSW	1040	19	15	1,040	1,040	Stream will be impacted by the extension of a triple barrel 7'x 8' RCBC and by its relocation into a step pool system & a new four barrel 8'x10' RCBC.
3C	UT at Camp Herman/SD	P/WS-V ;NSW	--	--	8	--	--	Existing triple barrel RCBC will have sediment removal from all three barrels on the upstream side.
5	UT to UT at Camp Herman/SO	P/WS-V ;NSW	156	--	12	156	--	Stream will be impacted by roadway fill from a channel relocation and the installation of a step pool system.
Total Streams Impact:			**1,589**	**102**	**50**	**1,589 @ 2:1**	**1,354 @ 1:1**	
Total Permanent Impacts:			**1,691**					
Total Stream Impact Requiring Mitigation (Total Perm. Impacts – Bank Stabilization):						**1,589**		

* - I = Intermittent, P = Perennial.

MORATORIUM

There are no moratoria for this project.

FEDERALLY PROTECTED SPECIES

Plants and animals with Federal classification of Endangered (E) or Threatened (T) are protected under provisions of Section 7 and Section 9 of the Endangered Species Act of 1973, as amended. As of October 4, 2019, the USFWS lists four federally protected species for Guilford County. Schweinitz's sunflower was surveyed for by NCDOT personnel on October 29, 2019. Suitable habitat for Schweinitz's sunflower is present in the project footprint but no specimens were observed. The project was surveyed for Small-whorled pogonia on May 22, 2016 with no species found. IPAC was checked on November 25, 2019 and the project was found to be outside of range of the Cape Fear shiner and Roanoke logperch.

Table 4 – Federally protected species listed for Guilford County

Scientific Name	Common Name	Federal Status*	Habitat	Biological Conclusion
Isotria medeoloide	Small-whorled pogonia	T	Yes	No Effect
Helianthus schweinitzii	Schweinitz's sunflower	E	Yes	No Effect
Notropis mekistocholas	Cape Fear shiner	E	--	No Effect
Percina rex	Roanoke logperch	E	--	No Effect

INDIRECT CUMULATIVE IMPACT ANALYSIS

NCDOT completed an Indirect and Cumulative Effects Screening Update for R-4707 in February 2017. The findings of this report state that the project is not expected to have an effect on future land use patterns in the Future Land Use Study Area (FLUSA). R-4707 is not expected to induce future growth or development which could result in impacts to wetlands or surface waters in or adjacent to the FLUSA. The effect of this project, when considered in the context of other past, present, and future actions, and the resulting impact to notable human and natural features, will not notably contribute to indirect and cumulative impacts to environmental resources in the FLUSA.

CULTURAL RESOURCES

In order to comply with Section 106 of the National Historic Preservation Act (1966, as amended), FHWA and NCDOT must evaluate the project's impact upon any extant architectural and archaeological resources and determine if additional measure will be necessary to mitigate any adverse effects of the project upon any significant properties and sites.

Archaeological Resources:

An archaeological survey was conducted by NCDOT of the APE in April 2017. A review of the APE found that no National Register listed or eligible Archaeological sites are present within the APE for this project, therefore no effect is anticipated on archaeological resources by implementation of this project.

Historic Architectural Resources:

On October 12, 2012 Historic Architecture reviewed the properties over 50 years of age in the Area of Potential Effects. None of these properties warranted evaluation for National Register eligibility. As of August 8, 2019, the conditions have not changed. This project was evaluated to comply with Section 106 of the National Historic Preservation Act and NC GS 121 (12)a.

Community Studies:

A community could be considered a potential EJ area of concern if the percentage of low-income or minority populations of a Block Group within 0.5-mile of the project corridor is at least 20 percent greater than those of the County. Based on the demographic analysis, there are no areas that would be considered an EJ area of concern within the Project Area.

FEMA COMPLIANCE

The project has been coordinated with appropriate state and local officials and the Federal Emergency Management Agency (FEMA) to assure compliance with FEMA, state, and local floodway regulations.

WILD AND SCENIC RIVER SYSTEM

The project will not impact any designated Wild and Scenic Rivers or any rivers included in the list of study rivers (Public Law 90-542, as amended).

MITIGATION OPTIONS

The NCDOT is committed to incorporating all reasonable and practicable design features to avoid and minimize jurisdictional impacts, and to provide full compensatory mitigation of all remaining, unavoidable jurisdictional impacts. Avoidance measures were taken during the planning and NEPA compliance stages, and minimization measures were incorporated as part of the project design.

Avoidance and Minimization

- BMPs were used throughout the project for stormwater treatment and to minimize erosion.
- Sheet flow across grassed median and shoulder sections will also provide treatment of stormwater before entering environmentally sensitive areas.
- Rip Rap pads and Preformed Scour Holes have been placed at pipe outlets to dissipate stormwater energy. This will slow stormwater velocities and minimize erosion at pipe outlets.
- A swale was used when applicable to slow conveyed stormwater to an acceptable velocity as it enters and passes through the buffer zones.
- A step pool is also used for the transition of an existing minor tributary into a relocated channel between the culverts.
- Roadway grade changes were kept to a minimum over existing to help minimize impacts.

- Stream impacts were also minimized during the design of the culverts and relocation channel.
- Additional avoidance and minimization efforts include elimination of impacts to two existing culverts within the project area. Initially, the existing 2@ 8'x8' RCBC located on -Y- just beyond the end of the project was to be extended on the outlet end to accommodate a widened roadway section. During final design, the proposed roadway was able to be tied into the existing roadway prior to the culvert, thus eliminating the extension and any impacts to the stream. There was a potential need to replace the 3@7'x8' RCBC located on -Y2- just beyond the end of construction (Site 3C) due to a possible CLOMR with the overall project improvements. However, a supplemental 60" pipe was placed parallel to the culvert extensions under US 29 to provide additional hydraulic capacity and eliminate the need to permanently impact Site 3C.

Compensation:

The NCDOT has avoided and minimized impacts to jurisdictional resources to the greatest extent practicable as described above. Tables 1 through 4 summarize the wetland, stream, buffer, and utility impacts for this project. NCDOT has obtained compensatory mitigation for **0.56 acre of wetland impacts**; **1,620 linear feet of stream impacts** and **174,163 square feet of buffer impacts** from the NCDMS.

REGULATORY APPROVALS

Section 404 and Section 10: Application is hereby made for a USACE Individual 404 and Section 10 Permit as required for the above-described activities.

Section 401: We are hereby requesting a 401 Water Quality Certification from the N. C. Division of Water Resources. In compliance with Section 143 215.3D(e) of the NCAC, we will provide $570.00 to act as payment for processing the Section 401 permit application previously noted in this application (see Subject line).

Thank you for your assistance with this project. If you have any questions or need additional information, please contact Jeff Hemphill at jhemphill@ncdot.gov or (919) 707-6126. A copy of this application and distribution list will also be posted on the NCDOT website at: https://xfer.services.ncdot.gov/pdea/PermApps/.

Sincerely,

for Philip S. Harris, P.E., C.P.M.
Environmental Analysis Unit Head

U.S. ARMY CORPS OF ENGINEERS

APPLICATION FOR DEPARTMENT OF THE ARMY PERMIT

33 CFR 325. The proponent agency is CECW-CO-R.

Form Approved - OMB No. 0710-0003 Expires: 30-SEPTEMBER-2015

Public reporting for this collection of information is estimated to average 11 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of the collection of information, including suggestions for reducing this burden, to Department of Defense, Washington Headquarters, Executive Services and Communications Directorate, Information Management Division and to the Office of Management and Budget, Paperwork Reduction Project (0710-0003). Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to any penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number. Please DO NOT RETURN your form to either of those addresses. Completed applications must be submitted to the District Engineer having jurisdiction over the location of the proposed activity.

PRIVACY ACT STATEMENT

Authorities: Rivers and Harbors Act, Section 10, 33 USC 403; Clean Water Act, Section 404, 33 USC 1344; Marine Protection, Research, and Sanctuaries Act, Section 103, 33 USC 1413; Regulatory Programs of the Corps of Engineers; Final Rule 33 CFR 320-332. Principal Purpose: Information provided on this form will be used in evaluating the application for a permit. Routine Uses: This information may be shared with the Department of Justice and other federal, state, and local government agencies, and the public and may be made available as part of a public notice as required by Federal law. Submission of requested information is voluntary, however, if information is not provided the permit application cannot be evaluated nor can a permit be issued. One set of original drawings or good reproducible copies which show the location and character of the proposed activity must be attached to this application (see sample drawings and/or instructions) and be submitted to the District Engineer having jurisdiction over the location of the proposed activity. An application that is not completed in full will be returned.

Section - Township - Range -

17. DIRECTIONS TO THE SITE

Please see attached Vicinity Map and Cover Letter.

18. Nature of Activity (Description of project, include all features)

The North Carolina Department of Transportation (NCDOT) proposes to replace on new location the existing deficient Bridge No. 360 that connects Reedy Fork Parkway (SR 4771) to SR 2526 (Summit Avenue), west of US 29 and construct a new interchange for Reedy Fork Parkway over US 29 on new location to the south of the existing interchange. The improvements would also include upgrades to Summit Avenue from 0.2 miles south of Bryan Park Road to the proposed interchange, and enhancements to Reedy Fork Parkway from SR 2790 (Eckerson Road) to Summit Avenue.

19. Project Purpose (Describe the reason or purpose of the project, see instructions)

The purpose of the proposed project is to replace the structurally deficient bridge over US 29, improve the interchange to meet interstate standards and accommodate future traffic volumes from the Reedy Fork Ranch Mixed Use Development.

USE BLOCKS 20-23 IF DREDGED AND/OR FILL MATERIAL IS TO BE DISCHARGED

20. Reason(s) for Discharge

- Replacement of the structurally deficient bridge (No. 360) over US 29;
- Modification of the existing US 29/ Reedy Fork Parkway Interchange to meet interstate standards to accommodate for the future re-designation of US 29 to I-785;
- Accommodation of the future traffic volumes from the Reedy Fork Ranch development and other anticipated future developments in the study areas.

21. Type(s) of Material Being Discharged and the Amount of Each Type in Cubic Yards:

Type Amount in Cubic Yards	Type Amount in Cubic Yards	Type Amount in Cubic Yards

NORTH CAROLINA
Environmental Quality

December 5, 2019

Mr. Philip S. Harris, III, P.E.
Environmental Analysis Unit
North Carolina Department of Transportation
1598 Mail Service Center
Raleigh, North Carolina 27699-1598

Dear Mr. Harris:

Subject: Mitigation Acceptance Letter:

R-4707, US 29 / SR 4771 (Reedy Fork Parkway) Interchange Improvements in Greensboro, Guilford County

The purpose of this letter is to notify you that the Division of Mitigation Services (DMS) will provide the stream, wetland and buffer mitigation for the subject project. Based on the information supplied by you on December 5, 2019, the impacts are located in CU 03020002 of the Cape Fear River basin in the Central Piedmont (CP) Eco-Region, and are as follows:

Stream and Wetlands	River Basin	CU Location	Eco-Region	Stream			Wetlands		
				Cold	Cool	Warm	Riparian	Non-Riparian	Coastal Marsh
Impacts	Cape Fear	03030002	CP	0	0	1,620.0	0.56	0	0

*Some of the impacts may be proposed to be mitigated at a 1:1 mitigation ratio. See permit application for details.

All buffer mitigation requests and approvals are administrated through the Riparian Restoration Buffer Fund. The NCDOT will be responsible to ensure that appropriate compensation for the buffer mitigation will be provided in the agreed upon method of fund transfer. Upon receipt of the NCDWR's Buffer Authorization Certification, DMS will transfer funds from the NCDOT 2984 Fund into the Riparian Restoration Buffer Fund. Upon completion of transfer payment, NCDOT will have completed its riparian buffer mitigation responsibility for TIP Number R-4707. Subsequently, DMS will conduct a review of current NCDOT ILF Program mitigation projects in the river basin to determine if available buffer mitigation credits exist. If there are buffer mitigation credits available, then the Riparian Restoration Buffer Fund will purchase the appropriate amount of buffer mitigation credits from NCDOT ILF Program. If additional buffer credits are needed, then DMS will review all active private buffer mitigation banks that submitted a proposal to IFB 16-031819 (issued March 18, 2019).

Based on the information supplied by you on December 5, 2019, the buffer impacts are located in the Jordan watershed, Haw arm of the Cape Fear River basin, and are as follows:

Buffer	River Basin	CU	Eco-Region	Buffer Impacts		
				Zone 1	Zone 2	TOTAL
Impacts	Cape Fear – Jordan - Haw	03030002	CP	103,314.0	70,849.0	174,163.0

DMS commits to implementing sufficient compensatory stream, wetland and buffer mitigation credits to offset the impacts associated with this project as determined by the regulatory agencies in accordance with the In-Lieu Fee Instrument dated July 28, 2010. If the above referenced impact amounts are revised, then this mitigation acceptance letter will no longer be valid and a new mitigation acceptance letter will be required from DMS.

If you have any questions or need additional information, please contact Beth Harmon at 919-707-8420.

Sincerely,

James B. Stanfill
DMS Asset Management Supervisor

Rick DeCola	Mead & Hunt - Project Manager	rick.decola@meadhunt.com
Carlas Sharpless	Mead & Hunt - Hydraulics	calras.sharpless@meadhunt.com

The meeting began at 10 AM. After a round of introductions, the meeting was turned over to Roger Weadon of Mead & Hunt to discuss jurisdictional site impacts sheet by sheet.

Sheet 4
No Comments

Sheet 5

Site 1:

- DWR asked if rip rap was in streambed at pipe outlet. It was stated that rip rap was placed on streambanks only at pipe outlet. Agencies are ok with rip rap in bed if velocities are high and it is needed for stability.
- The possibility of using a drop box and/or upsizing the last segment of pipe do reduce velocities was also discussed.

Site 2:

- USACE asked about the source of hydrology at this site getting impacted by the project. It was stated that future hydrology of this site would be addressed during the permitting process.

Sheet 6

Site 3A:

- USACE is agreeable to replacing the culvert beneath US 29 to correct any perching issues. It was noted that the existing culvert has a sufficiency rating of 80%.
- USACE requests to fix existing perching for the extension portions. Roger Weadon stated that the preliminary design shows the inlet end of the extension buried to prevent perching. However, NCDOT stated that proposed culvert extensions should not be buried 1' since existing culvert barrels are not buried and mostly free of sediment.

- DWR asked about baffles. No baffles or sills are proposed. It was stated that the culvert is already experiencing hydraulic capacity issues due to the flat slope and length of the culvert and adding a hard sill would further decrease hydraulic capacity. DWR and USACE would prefer a sill in the high flow barrel to maintain low flow channel but they can be omitted if justification by engineering necessity can be explained. It was noted that with the proposed extensions the US-29 culvert would be over 620' long so the requirement for aquatic passage may not be practical due to the enclosed length. USACE defers to WRC (Travis) to determine the needs for aquatic passage. It was also discussed if the new culvert under –Y- would need to be buried due to the culverts up and downstream not being buried. The culvert is approximately 400' long. USACE deferred to WRC (Travis) to get a determination. Post Meeting: In a follow-up email, Travis Wilson with WRC has confirmed that no burial of culvert barrels will be required. At the end of the meeting Charles Smith suggested that a rock vane on the bench may be an alternative to placing a hard sill in the barrel.
- Question was bought up about existing sewer line in culvert. NCDOT initially assumed that sewer line was abandoned therefore it could be removed from the culvert barrel. Division 7 expressed concerned about removing the abandoned sewer line out of the culvert barrel and was going to check with the city. Post Meeting: In and email received from Patty Eason she notes that the City of Greensboro has confirmed that the sewer line is still active but may be able to be relocated.
- It was stated that the new culvert beneath -Y- will be buried with 1' and have a sill to create a high flow barrel.

Site 3B:

- It was noted to take in account total meander length of stream when calculating impacts at the end of the new culvert.

Site 4:

- Narrow strip of wetlands could be a total take depending on depth of relocated channel.

Site 5:

- Discussion about tie-in with relocated channel. It was noted that there is a 3' drop to the new channel.
- USACE asked to consider using step-pools at a max of 12" drops to dissipate the 3' drop for the tie-in to the relocated channel.
- Roger Weadon stated that the use of step-pools could cause more impacts or drain the wetland. Roger Weadon also noted that the channel could be realigned to drop over a longer distance and minimize the linear impact of installing the step pools.

Site 6:

- Site would be candidate for total take since they could possibly lose their hydrology and drain out.

Sheet 7

- No Comments

Sheet 8

- It was noted that JS at approximately -Y- STA 30+00 Rt. begins downstream and off page before pipe outlet. Include the label "JS begins off sheet" for 4C permit drawings.

Sheet 9

Site 3C:

- USACE OK with culvert clean out beneath Reedy Fork Pkwy. Suggest cleanout from upstream side only to avoid conservation easement and private mitigation site on downstream side. Division 7 stated that culvert cleanout sounds reasonable and should not be a problem.
- If additional barrel or supplemental pipe is proposed, notify USACE early to begin coordination about the disturbing of the conservation easement downstream.

Stream Impacts: It was requested that these 4B notes include the difference in measured impacts vs. impacts listed in the EA/FONSI and an explanation explaining the difference.
The CP3 impacts were noted as 1558'. The permanent linear impacts for the current design are 1630'+/-. Note the final design is not complete so the 1630' value is an estimate and not the final number. Also, the 1630' value does not include any temporary stream impacts, indirect impacts, or non-mitigable impacts such as additional rip rap on channel banks.

Noted below is an Email sent out by Rick DeCola explaining the design changes that resulted in the increase in impacts:

The impacts in the EA/FONSI are based on the preliminary design, which had the proposed Reedy Fork Parkway interchange bridge placed directly over a sag in the US 29 profile. The bridge has vertical abutments at both end bents, which essentially creates a bucket when placed within the sag in the profile. If there would be a significant storm event and inlets became clogged, there would be no relief to the runoff in this scenario and water would begin to pool. This situation became apparent after we submitted 15% Plans for review.

Therefore, it was decided to shift the Reedy Fork Parkway alignment to the north in order to eliminate having the US 29 sag in the confines of the vertical abutments. Doing so also shifted the end of the proposed culvert under Reedy Fork Parkway to the north, where the channel meanders quite a bit. This resulted in approximately 170 LF of additional stream impacts.
It should be noted that we eliminated the culvert extension at the end of construction along Reedy Fork Parkway, which reduced linear stream and wetland impacts. Our design ends construction prior to that culvert, eliminating approximately 70 LF of impacts that would have been caused by the short culvert extension and channel realignment.

The explanation above aligns with the increase of linear stream impacts from CP3: 1558 LF at CP3 vs. approximately 1630 LF currently.

Respectfully submitted,
MEAD & HUNT, Inc.

The meeting began at 1 PM. After a round of introductions, the meeting was turned over to Roger Weadon of Mead & Hunt to discuss jurisdictional site impacts sheet by sheet.

Sheet 4 (wetland impacts)
No Comments

Sheet 5 (wetland impacts)

Site 1:
- No Comments

Site 2:
- Comment was made addressing if site 2 should be a total take based on loss of hydrology. It was noted to check with Jeff for the status of this. It was also noted that Division will provide photo of the site for verification.

Sheet 6 (wetland impacts)

Site 3A:
- Comment was made that Travis with wildlife is ok with culvert inlet as shown with no sills.

Site 3B:
- It was noted that that permanent surface water impact hatching across entire stream should be extended to bottom of rip-rap with stream relocation tie-in point. Bank Stabilization should continue from that point to end of rip-rap on other side along streambank. Comment was also made that label for utilities can be removed.

Site 4:

- It was noted that site will not be total take since it will maintain hydrology from upstream pond.

Site 5:

- Comment was made to revise hatching angle/spacing to ensure that hatching is visible for the entire length of the stream impact. The usage of a step-pool avoids an environmental impact to entire stream.

Site 6:

- No Comments

Sheet 7 (wetland impacts)

No Comments

Sheet 8 (wetland impacts)

No Comments

Sheet 9 (wetland impacts)

No Comments

General Comments

- The comment was made to add avoidance and minimization statements into the stormwater management about not impacting the two existing culverts within the project area.

- **Site 3A**: There was discussion about the status and removal of the existing sewer line in the existing culvert beneath US 29. It was noted that the sewer line is abandoned, but it will remain in place. It was noted that removal would cause too much disturbance.

- It was noted that it is unknown if the proposed 30" Sanitary Sewer line at end of culvert will be trenchless or trenched through the stream.

Additional Comment from David Bailey regarding proposed 30" Sanitary Sewer line

Related to the proposed 30" Sanitary Sewer line: Is this sewer a relocation of an existing? If so, and if this line will be trenched in, and/or if there are any other impacts to streams and wetlands related to utilities, these impacts are typically included in the NCDOT permit package. This is because there is no purpose and need of utility relocations without the NCDOT project. If this is a new sewer project that would be done irrespective of the NCDOT project, then the utility company could apply for the impacts separately.

- **Site 3C:** There was discussion about sediment removal in the existing culvert barrels and ways to prevent it. Roger mentioned that it is no way of knowing why the sediment formed in the existing culvert barrels or if it will come back after removal. It was also mentioned that removal should take place from the inlet end of the culvert to avoid the mitigation site.

- It was noted that this could be an individual permit.

Additional Comment from David Bailey regarding Permit Requirements

Related to the type of permit required: at this time there is no way to permit the impacts proposed for R-4707 other than an Individual Permit. There has been speculation about whether or not General Permit 31 would cover such projects when it is re-authorized, but that wouldn't occur until well after NCDOT will apply for this permit.

Sheet 6 (buffer impacts)

Site 5:

- Revise buffer impacts to include small triangle between wetland and PUE borders. This will also match the wetland impact shown.

Sheet 6C (inset) (buffer impacts)

- Site 3B: label and arrows can be removed.

Respectfully submitted,

Project Description

Project Length (lin. miles or feet):	1.36	**Surrounding Land Use:**	Residential, Industrial

	Proposed Project	**Existing Site**
Project Built-Upon Area (ac.)	36.3 ac.	26.7 ac.
Typical Cross Section Description:	US-29 will remain the same typical section with minor widening and realignment to accommodate interchange improvements. SR 4771 (Reedy Fork Pkwy) is to be realigned with a proposed DDI interchange over US-29 south of its current location. A section of SR 2526 (Summit Ave) will be upgraded from a 2-lane undived facility to a 4-lane facility with a concrete median.	US-29 is a 4-lane divided highway with a grassed median and shoulder section. SR 4771 (Reedy Fork Pkwy) is an existing 2-lane facility with shoulder section with various widths to accommodate turn lanes. SR 2526 (Summit Ave) is also a 2-lane undivided facility with a shoulder section and variable widths to accomodate turn lanes in spots.
Annual Avg Daily Traffic (veh/hr/day):	Design/Future: 49,000 Year: 2040	Existing: 40,200 Year: 2020
General Project Narrative: (Description of Minimization of Water Quality Impacts)	This project involves improving the interchange of US 29 and SR 4771 (Reedy Fork Pkwy) including the removal of the existing interchange bridge and realigning SR 4771 (Reedy Fork Pkwy) to cross US 29 over new location. The proposed DDI interchange will be located south of the current interchange. The project also involves improving a section of SR 2526 (Summit Ave.) and reconfiguring the intersection with SR 4771 (Reedy Fork Pkwy.) along with improving driveway connections to busineses in the industiral area for increased truck traffic. BMPs were used thoughout the project for stormwater treatment and to minimize erosion. Sheet flow across grassed median and shoulder sections will also provide treatment of stormwater before entering enviromentally sensitive areas. Rip Rap pads and Preformed Scour Holes have been placed at pipe outlets to dissapate stormwater energy. This will slow stormwater velocities and minimize erosion at pipe outlets. A swale was used when applicable to slow conveyed stormwater to an acceptable velocity as it enters and passes through the buffer zones. A step pool is also used for the transition of an existing minor tributary into a relocated channel between the culverts. Roadway grade changes were kept to a minimum over existing to help minimize impacts. Stream impacts were also minimized during the construction of the culverts and relocation channel. Additional avoidance and minimization efforts include elimination of impacts to two existing culverts within the project area. Initially, the existing 2@ 8'x8' RCBC located on -Y- just beyond the end of the project was to be extended on the outlet end to acommodate a widened roadway section. During final design, the proposed roadway was able to be tied into the existing roadway prior to the culvert, thus eliminiating the extension and any impacts to the stream. There was a potential need to replace the 3@7'x8' RCBC located on -Y2- just beyond the end of construction (Site 3C) due to a possible CLOMR with the overall project improvements. However, a supplemental 60" pipe was placed parallel to the culvert extensions under US 29 to provide additional hydraulic capacity and eliminate the need to permanently impact Site 3C.

Swales

Sheet No.	Station & Coordinates (Road and Non Road Projects)	Surface Water Body	Base Width (ft)	Front Slope (H:1)	Back Slope (H:1)	Drainage Area (ac)	Recommended Treatm't Length (ft)	Actual Length (ft)	Longitudinal Slope (%)	Q2 (cfs)	V2 (fps)	Q10 (cfs)	V10 (fps)	Rock Checks Used	BMP Associated w/ Buffer Rules?
6	-RPB- 37+13 LT	(1)Unnamed Tributary at	5.0	3.0	3.0	27.6	2760	72	0.30%	56.8	2.7	72.6	2.9	No	Yes

Additional Comments

The velocity at this swale is 2.7 fps due to the amount of flowrate that it is conveying. It would takeover a 35' wide base swale to reach velocities below 2 fps which is not feasible to obtain.

North Carolina Department of Transportation

Highway Stormwater Program

STORMWATER MANAGEMENT PLAN

WBS Element: **TIP No.:** R-4707 **County(ies):** Guilford

Preformed Scour Holes and Energy Dissipators

Sheet No.	Station & Coordinates (Road and Non Road Projects)	Surface Water Body	Energy Dissipator Type	Riprap Type	Drainage Area (ac)	Conveyance Structure	Pipe/Structure Dimensions (in)	Q10 (cfs)	V10 (fps)	BMP Associated w/ Buffer Rules?
5	-L- 36+90 LT	(1)Unnamed Tributary at	PSH	Class 'B'	0.5	Pipe	15	2.6	1.3	Yes
8	-Y- 28+50 RT	(1)Unnamed Tributary at	PSH	Class 'B'	0.1	Pipe	15	2.7	1.3	No
6	-Y- 36+00 RT	(1)Unnamed Tributary at	PSH	Class 'B'	0.4	Pipe	15	1.3	1.3	No
6	-RPC- 21+00 RT	(1)Unnamed Tributary at	PSH	Class 'B'	0.7	Pipe	15	3.3	1.0	Yes

Additional Comments

The Preformed Scour Holes placed at -L- 36+90 LT and -RPC- 21+00 are located at outlets in the vicinity of buffer zones near site 2 and site 4 respectively. Sites 2 and 4 are minor tributaries that eventually flow into the "Unnamed Tributary at Camp Herman." They will dissapate the stormwater flow at these pipe outlets before entering the buffer zone. Preformed Scour Holes located at -Y- 28+50 RT and -Y- 36+00 RT outlet to overland areas on the project that will eventually drain into the "Unnamed Tributary at Camp Herman" after overland flow and flowing through minor tributaries. The velocities listed in the table are velocities exiting the preformed scour holes.

* Refer to the NCDOT Best Management Practices Toolbox (2014), NCDOT Standards, the Federal Highway Administration (FHWA) Hydraulic Engineering Circular No. 14 (HEC-14), Third Edition, Hydraulic Design of Energy Dissipators for Culverts and Channels (July 2006), as applicable, for design guidance and criteria.

NOTE:

PER DWQ REGULATIONS, PLACEMENT OF CHANNEL STABILIZATION STONE SHALL BE LIMITED TO THE BOTTOM AND BANKS OF CHANNEL WHICH ARE DIRECTLY IMPACTED BY THE SEWER LINE INSTALLATION. RIP-RAP SHALL NOT BE PLACED IN AREAS THAT WERE NOT DISTURBED, AND SHALL ONLY BE INSTALLED BELOW THE NORMAL HIGH WATER LEVEL. RIP-RAP SHALL ONLY BE INSTALLED BELOW THE EXISTING GRADE OF THE CHANNEL, SUNK INTO THE GROUND 6" BELOW THE ORIGINAL BOTTOM OF CHANNEL, SUCH THAT ORIGINAL GRADES AND CONTOURS ARE NOT MODIFIED. RIP-RAP SHALL NOT BE PLACED ON TOP OF THE SURFACE OF THE GROUND UNDER ANY CIRCUMSTANCES.
