ATTN: Mr. David Bailey
NCDOT Division 7 Project Coordinator

SUBJECT: **Application for Modification to Phased Permit Application for Section 404 Individual Permit and Section 401 Water Quality Certification** for the proposed relocation of NC 119 from Interstate 40/85 to north of SR 1918 (Mrs. While Lane) in Mebane (Mebane Bypass), Alamance County, North Carolina, Division 7. Federal Aid Project No. STP-119 (1), TIP No. U-3109 A&B.

Debit $570.00 from WBS 34900.1.2

N.C. Division of Water Resources, Section 401 Water Quality Certification, NCDWR Project No. 20170239, dated March 24, 2017.

Dear Sir:

The purpose of this letter is to request a modification to the United Stated Army Corps of Engineers (USACE) Section 404 Individual Permit and North Carolina Division of Water Resources Section 401 Certification for the above-referenced project.

The original 2017 permit application (submitted February 27, 2017) presented final impacts for U-3109A (3.3 miles, from near the Interstate 85/40 [I-85/I-40] interchange to north of SR 1921/SR 1996 [Mebane Rogers Road/East Stagecoach Road]). This modification presents the final design impacts for U-3109B (1.5 miles, from north of Mebane Rogers Road/ East Stagecoach Road to north of SR 1918 [Mrs. White Lane]). In addition to the final design impacts for Section B, this letter also requests modification to Section A, where changes to the design have increased wetland impacts at Site 19.

Please see the enclosed ENG form; DMS mitigation acceptance letter for Section B; South Buffalo Creek Mitigation Site debit ledger insert for wetland impacts to Section A; Concurrence Points 4B and 4C meeting minutes for Section B; Cates Farm on-site mitigation meeting minutes for Section B; Revised permit drawings for Sites 18, 19, and 20 within Section A; stormwater management plan and permit drawings for Section B; and roadway plans for Section B.

PROJECT SCHEDULE

This project is being permitted in two phases, Sections A and B. Section A let on May 16, 2017 and is currently under construction. Section B currently has a let date of July 17, 2018 and a let review date of May 29, 2018.

NEPA DOCUMENT STATUS

A Draft Environmental Impact Statement (DEIS) and Draft Section 4(F) Evaluation were completed for this project in August 2007. Subsequently, a FEIS and Final Section 4(F) Evaluation were completed in June 2009. The Record of Decision (ROD) was completed in December 2009. A FEIS re-evaluation was completed in July 2013. A Right-of-Way (ROW) Consultation for the entire project was completed in October 2014. A Construction Consultation for U-3109A/ROW Consultation for U-3109B was completed in July 2017. A Construction Consultation for U-3109B is currently in progress. Additional copies are available upon request.

In compliance with the NEPA/404 Merger Process, Concurrence Points (CP) 3 and 4A were reached on June 19, 2008. Alternative 9 (the Preferred Alternative) was selected as the Least Environmentally Damaging Practicable Alternative (LEDPA) at CP 3. CP 4B was reached for Section A on July 25, 2013 and CP 4C was reached on May 14, 2015. CP 4B was reached for Section B on October 19, 2017 and CP 4C was reached on February 15, 2018.

IMPACTS TO WATERS OF THE U.S.

Summary of Impacts

Summary of U-3109 Surface Water and Wetland Impacts

The original final impacts for Section A included 4,759 linear feet of permanent stream impacts; 167 linear feet of bank stabilization; 461 linear feet of temporary stream impacts; 0.32 acres of open water impacts; 0.27 acres of permanent wetland impacts; 0.02 acres of wetland excavation; and 0.09 acres of mechanized clearing. Current changes to Site 19 have resulted in the addition of 0.01 acre of permanent wetland impacts. The revised total wetland impacts for Section A are now 0.39 acre.

Preliminary design impacts for Section B of the project from the 2017 Permit Application were 1,306 linear feet of permanent stream impacts and 0.51 acres of permanent wetland impacts. Final design impacts are now 562 linear feet of permanent stream impacts (27 linear feet of which do not constitute a loss of waters); 85 linear feet of bank stabilization; 90 linear feet of temporary stream impacts; 0.23 acres of permanent wetland

impacts; 0.01 acres of excavation; and 0.03 acres of mechanized clearing. The reduction of impacts from preliminary to final design was primarily due to a refinement of the roadway and stormwater design. This resulted in the elimination of preliminary design Sites 7 – 9 from the permit drawings. The proposed roadway for Section B was also reduced from a four-lane roadway to a two lane-roadway. Additionally, the design was modified on Y21REV (North First Street) so that the intersection with the L-line was moved and impacts to preliminary design Sites 10 and 11 were eliminated from the project.

Please see Tables 1 and 2 for a breakdown of surface water and wetland impacts, by type, for the entire project. Please also see *Jurisdictional Impacts by Section* below for an explanation of the revisions to Section A and a site-by-site breakdown of the impacts for Section B.

Table 1. Summary of Surface Water Impacts for U-3109

Section	Design Stage	Stream Impact Type	Impact Length (lin. ft.)
U-3109A	Final	Permanent Fill	4,759
		Bank Stabilization	167
		Temporary Fill	461
U-3109B	Final	Permanent Fill	562
		Bank Stabilization	85
		Temporary Fill	90
TOTAL[1]			5,573 Permanent 551 Temporary

[1] In addition to the impacts listed in the table, 0.32 acre of permanent open water impacts also occur in Section A.

Table 2. Summary of Wetland Impacts for U-3109

Section	Design Stage	Wetland Impact Type	Acreage (ac.)
U-3109A	Final	Permanent Fill	0.28
		Excavation	0.02
		Mechanized Clearing	0.09
U-3109B	Final	Permanent Fill	0.23
		Excavation	0.01
		Mechanized Clearing	0.03
TOTAL			0.66

Utility Impacts

No utility impacts to jurisdictional features will occur in either Section A or Section B of the project.

Buffer Impacts

U-3109 (Sections A and B) reached CPs 3 (LEDPA) and 4A (Avoidance and Minimization) on June 19, 2008, which is prior to the effective date of the Jordan Lake Riparian Buffer Rules, which were initially enacted on August 11, 2009. Therefore, the project footprint presented at the time of CP 4A is considered exempt from the Jordan Lake Riparian Buffer Rules.

Jurisdictional Impacts by Section

U-3109A

Design modifications to Site 19 within the A Section will result in the addition of 0.01 acre of permanent fill to the wetland WA. There will also be slight culvert alignment changes to changes to sites 18 and 20. These changes will not involve any additional impacts at those sites. Table 4 details how these additional impacts have altered the final impacts for Section A.

Table 3. U-3109A Revised Final Stream Impacts (Remain the same as original)

	Impacts (lin. ft.)	Impacts Requiring USACE mitigation (lin. ft.)	Impacts Requiring 1:1 DWR mitigation (lin. ft.)
Total Temporary Fill Impacts	461	0	0
Total Permanent Fill Impacts	4,759	4,506	3,523
Total Bank Stabilization Impacts	167	0	167

Table 4. U-3109A Revised Final Wetland Impacts (Bold indicates the revision)

	Permanent Impacts (ac.)	Impacts Requiring USACE mitigation (ac.)
Total Permanent Fill	**0.28**	**0.28**
Total Excavation	0.02	0.02
Total Mechanized Clearing	0.09	0.09
TOTAL IMPACTS	**0.39**	**0.39**[1]

[1] Wetland WA (0.04 acres of permanent fill and 0.01 acres of mechanized clearing) has a 1:1 mitigation ratio. All other wetlands have a 2:1 mitigation ratio.

U-3109B

Tables 5 and 6 provide site-by-site impacts to streams and wetlands within Section B of the project. These impacts are based on final design. The proposed impacts for this section are 562 linear feet of permanent stream impacts (27 linear feet of which do not constitute a loss of waters); 85 linear feet of bank stabilization; and 90 linear feet of temporary stream impacts.

Table 5. U-3109B Final Stream Impacts

Permit Site No.	Stream Name	Stream ID (FEIS ID)[1]	Int./Per.	Impact Type	Impacts (lin. ft.)	Impacts Requiring USACE mitigation (lin. ft.)	USACE Mitigation Ratio	Impacts Requiring 1:1 DWR mitigation (lin. ft.)
1	UT of Mill Creek (Forest Lake)	SA (UT14)[2]	Per.	Perm. Fill	120	120	2:1	0
				Perm. Fill – No Loss of Waters	27	0[3]		0

TOTAL TEMPORARY FILL IMPACTS					**90**	**0**		**0**

[1] Stream IDs are from the October 2016 JD re-verification. Corresponding Stream IDs that were used in the FEIS are in parentheses, where applicable.

[2] Stream SA is also Stream SU in Section A.

[3] Per USACE, these impacts do not constitute a loss of waters and, therefore, will not require mitigation.

[4] Per USACE, Stream SC does not require mitigation.

Table 6. U-3109B Final Wetland Impacts

Permit Site No.	Wetland ID[1]	Wetland Type[2]	Impact Type	Permanent Impacts (ac.)[3]	Impacts Requiring USACE mitigation (ac.)
5	WA	FP	Perm. Fill	<0.01	<0.01
			Excavation	<0.01	<0.01
			Mechanized Clearing	<0.01	<0.01
6	WB	NTFM	Perm. Fill	0.06	0.06
			Excavation	<0.01	<0.01
			Mechanized Clearing	0.01	0.01
7	WC	NTFM	Perm. Fill	0.17	0.17
			Excavation	<0.01	<0.01
			Mechanized Clearing	0.02	0.02
TOTAL IMPACTS				**0.27**	**0.27**

[1] Wetland IDs are from the October 2016 JD re-verification. No wetlands were identified in the FEIS in the B Section of the project.

[2] FP – Floodplain Pool; NTFM – Non-Tidal Freshwater Marsh. All wetlands are Riparian.

[3] Rounded totals are sum of actual impacts.

Permit Site 1: The installation of a 12-foot by 6-foot single barrel Reinforced Concrete Box Culvert (RCBC) under the L-line will result in 120 linear feet of permanent impacts; 51 linear feet of bank stabilization impacts; and 50 linear feet of temporary stream impacts to Stream SA. Additionally, there will be 27 linear feet of permanent impacts separate from the above-listed 120 linear feet due to the placement of riprap along the streambed downstream of the RCBC. This 27 linear feet is considered a permanent impact, but the riprap is keyed into the streambed and does not constitute a loss of waters; therefore, no mitigation will be required for this length of impact.

Permit Site 2: The installation of two Hazardous Spill Basins (HSB) and their associated drainage systems along the L-line will result in 12 linear feet of bank stabilization impacts and 10 linear feet of temporary stream impacts to Mill Creek.

Permit Site 3: The installation of a 42-inch Reinforced Concrete Pipe (RCP) under the L-line will result in 288 linear feet of permanent impacts; 22 linear feet of bank stabilization impacts; and 20 linear feet of temporary stream impacts to Stream SB.

Permit Site 4: The installation of a 30-inch RCP under the L-line will result in 127 linear feet of permanent stream impact and 10 linear feet of temporary stream impact to Stream SC.

Permit Site 5: The installation of the same 30-inch RCP as Site 4 will result in <0.01 acres of permanent wetland impacts; <0.01 acres of excavation; and <0.01 acres of mechanized clearing to Wetland WA.

Permit Site 6: The installation of a 30-inch RCP under the L-line will result in 0.06 acres of permanent wetland impacts; <0.01 acres of excavation; and 0.01 acres of mechanized clearing to Wetland WB.

Permit Site 7: The installation of a 36-inch RCP under the L-line and adjacent Y-line intersection with Y-21 (North First Street) will result in 0.17 acres of permanent wetland impacts; <0.01 acres of excavation; and 0.02 acres of mechanized clearing to Wetland WC.

The alignment of this Y-line intersection has shifted north since the original permit application was submitted, resulting in additional impacts to Wetland WC. The shift in alignment was due to a request received from the Town of Mebane to move the alignment to eliminate impacts to a water line. Due to this agreement, NCDOT had to maximize the movement of the new alignment away from the previous proposed location to ensure that it would not cause a sight distance issue. Although impacts to Wetland WC increased due to the alignment revision, preliminary design Sites 10 and 11 were eliminated from the project. This removed <0.01 acres of permanent wetland impacts and 480 linear feet of permanent stream impacts that were proposed in the preliminary design from the project.

MITIGATION OPTIONS

The USACE has adopted, through the Council on Environmental Quality (CEQ), a wetland mitigation policy that embraces the concept of "no net loss of wetlands" and sequencing. The purpose of this policy is to restore and maintain the chemical, biological, and physical integrity of the waters of the United States. CEQ has defined mitigation of wetland and surface water impacts to include: avoiding impacts, minimizing impacts, rectifying impacts, reducing impacts over time, and compensating for impacts (40 CFR 1508.20).

The NCDOT is committed to incorporating all reasonable and practicable design features to avoid and minimize jurisdictional impacts, and to provide full compensatory mitigation of all remaining, unavoidable jurisdictional impacts. Avoidance measures were taken during the planning phase and minimization measures were incorporated as part of the project design. Minimization includes the examination of appropriate and practicable steps to reduce the adverse impacts.

Avoidance and Minimization, Section B

Avoidance and minimization has been employed in the project area to the maximum extent practicable. Listed below are some of the measures implemented on the project as a whole:

- NCDOT's Best Management Practices (BMPs) for the Protection of Surface Waters will be enforced.
- NCDOT's Best Management Practices for Construction and Maintenance Activities will also be employed.
- Due to a portion of the project being within the Graham-Mebane Reservoir watershed crticial area, Design Standards in Sensitive Watersheds will be employed.

Avoidance and Minimization included in FEIS/CP 4A (Section B only)

Below is an overview of the avoidance and minimization that NCDOT has agreed to for this project, listed based on the document or meeting that it is attributed to. Any additional information for an item is listed below the item in italics.

FEIS

- During the development of the preliminary engineering designs for each Detailed Study Alternative, including the Preferred Alternative (Alternative 9), efforts were made to avoid and minimize impacts to wetlands and streams wherever practicable. Where stream crossings were unavoidable, they were located, within design constraints, as perpendicular as practicable, in order to minimize the length of stream impacted.
- Jurisdictional impacts would be further minimized by a reduction in side slopes to 2:1 in the areas of wetland impacts. Sensitive placement of drainage structures, during final design of Preferred Alternative 9, would minimize degradation of water quality and reduce adverse impacts on aquatic habitat viability in streams and tributaries. Based on preliminary designs, there are no substantial fill slopes associated with this project. A determination would be made during final design if retaining walls should be included in the design. Once surveys of the project area are available, the preliminary design can be revised to further minimize impacts to the human and natural environments.
- The tie-in from proposed NC 119 to existing NC 119 south of the Mill Creek community was designed to end before the Mill Creek crossing for the Detailed Study Alternatives, including Preferred Alternative 9, in this area.
- A bridge over Mill Creek is an additional minimization component. Bridging floodplain wetlands along the larger stream systems, such as Mill Creek, would decrease the degree of potential habitat fragmentation and reduce potential wildlife mortality due to traffic operations by providing riparian corridors for wildlife use.
    - *The bridge will span Mill Creek.*

CP 4A (items that were not listed in the FEIS)

- The Cates Farm on-site stream restoration project will be discussed and evaluated at CP 4B.
    - *A more detailed restoration discussion for the Cates Farm site will occur below in the Compensatory Mitigation Section.*

Avoidance and Minimization, Section B Stormwater Management Plan

After CP 4A, the project was split into its 2 Sections. The information that follows in this section is for the B Section of the project only.

- Approximately 5,800 linear feet of grass swales have been incorporated in roadside ditches, where possible, to reduce the velocity and promote the infiltration of runoff.
- Riprap at pipe outlets, ditches, and streambanks has been incorporated to minimize erosion on slopes where vegetation will not be adequate.
- Storm drainage discharging directly to wetlands has been designed to meet non-erosive velocity requirements.
- NCDOT standards for ground cover, vegetation, and slope stabilization will be adhered to during the life of this project, and will be specified in the NCDOT Erosion and Sediment Control Plan for the project.
- Five hazardous spill basins are proposed to protect against the accidental release of hazardous material into receiving jurisdictional waters. Hazardous Spill Basins will be installed at the following locations:
    - –L– 199+50 LT to –L– 206+00 LT
    - –L– 198+50 RT to –L– 205+00 RT
    - –L– 206+00 LT to –L– 210+00 LT
    - –L– 220+50 RT to –L– 228+50 RT
    - –L– 232+00 RT to –L– 228+50 RT
    - –L– 267+00 LT to –L– 256+50 LT

Compensatory Mitigation

U-3109A

Compensatory mitigation requirements for permanent stream and wetland impacts associated with U-3109A are summarized below in Table 7. These impacts occur in HUC 03030002.

Due to a revision to a revision at Site 19, the wetland impacts for Section A have increased by 0.01 acre. All other stream impacts remain the same as the original permit.

Compensatory mitigation at a 2:1 ratio for 0.33 acre of permanent riparian wetland impacts resulting from roadway fill (0.23 acre), mechanized clearing (0.08 acre), and excavation (0.02 acre); and 0.05 acre at a 1:1 ratio resulting from roadway fill (**0.05** acre)

and mechanized clearing (0.01 acre) will be offset by NCDOT by debiting the South Buffalo Creek Mitigation Site. See the attached debit ledger transaction.

Table 7. U-3109A Revised Compensatory Mitigation Summary (Bold indicates the revision)

	Stream Impacts (lin. ft.)	Riparian Wetland Impacts (ac.)
Impacts Requiring Mitigation	4,506	0.38
Mitigation Ratio	3,888 at 2:1	0.33 at 2:1
	618 at 1:1	**0.06** at 1:1
Total DMS Mitigation	8,394	---
Total Debit Ledger Mitigation	---	**0.72**

U-3109B

Compensatory mitigation requirements for permanent stream and wetland impacts associated with U-3109B are summarized below in Table 8. These impacts occur in HUC 03030002.

Six hundred forty-seven linear feet of permanent stream impacts are proposed in the B Section; of that total, 85 linear feet are bank stabilization impacts, which do not require mitigation per USACE. Of the remaining 562 linear feet of permanent stream impacts, 408 linear feet require compensatory mitigation at a 2:1 ratio per USACE and 154 linear feet do not require any mitigation (Sites 1 and 4). Since NCDWR-mandated compensatory mitigation is not required for any permanent impacts along intermittent streams or any bank stabilization impacts, and no permanent impacts along perennial streams equal or exceed 300 linear feet, mitigation for NCDWR is not required for any stream impacts within the B Section.

The total USACE stream mitigation requirement exceeds the NCDWR stream mitigation requirement; therefore, NCDOT has requested compensatory mitigation from DMS for the 408 linear feet of permanent stream impacts at a 2:1 ratio. NCDOT will also request mitigation from DMS to offset 0.27 acres (2:1 ratio) of permanent riparian wetland impacts.

Table 8. U-3109B Revised Compensatory Mitigation Summary

	Stream Impacts (lin. ft.)	Riparian Wetland Impacts (ac.)
Impacts Requiring Mitigation	408	0.27
Mitigation Ratio	2:1	2:1
Total DMS Mitigation	816	0.54

NCDOT has requested that DMS provide compensatory mitigation for impacts associated with the B Section at this time. The numbers presented in the attached DMS letter (1,306 linear feet or warm water streams and 0.51 acres of riparian wetlands) are based on the preliminary design presented in the original permit application. These numbers are larger than the impacts requiring mitigation in the Section B final design. However, NCDOT has not asked that DMS revise these numbers to match the final design impacts since other mitigation options, such as debit ledger and/or on-site mitigation, are currently being pursued. The Cates Farm property is currently being considered as an on-site mitigation site that would offset impacts in this section. Based on the site visit on December 5, 2017 (please see attached meeting minutes), there is currently between 1,456–1,746 linear feet of potential stream credit and 0.168 acres of wetland credit available at this site. However, the mitigation plans were not complete at the time of this submittal, which is why NCDOT has chosen to submit this application with DMS covering the mitigable impacts.

Once on-site mitigation plans are finalized for Cates Farm, the potential stream credits at this site would more than offset stream mitigation required for the B Section and cover a portion of the wetland mitigation required. At that time, NCDOT would request that the compensatory mitigation burden be transferred from DMS to the Cates Farm site to cover the stream mitigation and the portion of the wetland mitigation. Any remaining wetland mitigation required would either remain with DMS or be covered by debit ledger, if available.

MORATORIUM

No moratoria are proposed for section of this project.

FEDERALLY PROTECTED SPECIES

Plants and animals with Federal classification of Endangered (E) or Threatened (T) are protected under provisions of Section 7 and Section 9 of the Endangered Species Act of 1973, as amended. As of March 26, 2018, the U.S. Fish and Wildlife Service (USFWS) lists one federally protected species for Alamance County, Cape Fear shiner (*Notropis mekistocholas*). Due to its recent listing, it is not included in any previous NEPA documentation or the original permit application. Previously, no Threatened or Endangered species were listed in the county.

This species is listed as Endangered, but as a "range by basin" species, meaning that the project would have to occur within the range defined by USFWS on their website (https://ecos.fws.gov/ecp0/profile/speciesProfile?sId=6063 for this species) in order to require detailed assessment. U-3109 in its entirety is well outside of the defined range of Cape Fear shiner; therefore, there is no habitat for this species within the project footprint and a Biological Conclusion of **No Effect** has been rendered for this species.

Northern long-eared bat

The USFWS has developed a programmatic biological opinion (PBO) in conjunction with FHWA, USACE, and NCDOT for the northern long-eared bat (NLEB) (*Myotis septentrionalis*) in eastern North Carolina. The PBO covers the entire NCDOT program in Divisions 1-8, including all NCDOT projects and activities. The programmatic determination for NLEB for the NCDOT program is **May Affect, Likely to Adversely Affect**. The PBO provides incidental take coverage for NLEB and will ensure compliance with Section 7 of the Endangered Species Act for five years for all NCDOT projects with a federal nexus in Divisions 1-8, which includes Alamance County, where U-3109 is located. This level of incidental take is authorized from the effective date of a final listing determination through April 30, 2020.

Bald eagle

Habitat for the bald eagle primarily consists of mature forest in proximity to large bodies of open water for foraging. Large dominant trees are utilized for nesting sites, typically within 1.0 mile of open water.

A desktop-GIS assessment of the entire project (Sections A and B), as well as the area within a 1.13-mile radius (1.0 mile plus 660 feet) of the project limits, was performed on January 3, 2017 using the newest-available color aerials of the review area. Water bodies large enough and/or sufficiently open to be considered potential feeding sources were identified, including the Graham-Mebane Reservoir and Forest Lake. Since there was foraging habitat within the review area, a survey of the project study area and the area within 660 feet of the project limits was conducted on January 24, 2017. No individuals or nests were identified within the nesting survey area. Additionally, a review of the N.C. Natural Heritage Program (NCNHP) database on January 3, 2018 revealed no known occurrences of this species within 1.0 mile of the project study area. Due to the lack of

habitat, known occurrences, and minimal impact anticipated for this project, it has been determined that this project will not affect this species.

CULTURAL RESOURCES

Section 4(f) Resources and Historical Architecture, Section B

There is one resource within the boundaries of the Section B, the Cates Farm, which is protected under Section 4(f) of the Department of Transportation Act. For the preferred alternative (Alternative 9), the proposed roadway is anticipated to be visible and audible from the farmhouse. However, it will not require the removal of any structures associated with the Cates Farm. The Historic Preservation Office (HPO) initially determined that Alternative 9 will have an "adverse effect" on the property in their concurrence form dated June 6, 2002, which is included in the FEIS. A subsequent concurrence form, dated August 21, 2007, confirms the HPO's previous finding and is also included in the FEIS.

A Memorandum of Agreement (MOA) for mitigative measures concerning impacts to the Cates Farm was signed in October 2009 and was included with the original permit application. The MOA stipulates that the NCDOT will complete a photo-documentation record of the Cates Farm and its surroundings and prepare a landscape plan that incorporates native plants along the top of the roadway slope in a natural appearance and composition to help to screen the farm from the roadway. The photo-documentation of the Cates Farm is underway and will be completed prior to construction. The landscape plan will be prepared in coordination with the property owners and implemented once construction is completed.

REGULATORY APPROVALS

A request is hereby made to the Department of the Army to modify the existing Section 404 Individual Permit as required for the above-described activities for T.I.P. Project No. U-3109.

We are also hereby requesting a modification to the Section 401 Water Quality Certification. In compliance with Section 143-215.3D(e) of the North Carolina Administrative Code (NCAC), we will provide $570.00 to act as payment for processing the Section 401 permit. We are providing two copies of this application to the North Carolina Department of Environmental Quality (NCDEQ), NCDWR, for their review and approval.

A copy of this permit modification application and its distribution list will be posted on the NCDOT website under *Quick Links > Permit Applications* at https://connect.ncdot.gov/resources/Environmental/Pages/default.aspx. Copies of the NEPA documents are also available at the above website address under *Quick Links > Environmental Documents*. Thank you for your time and assistance with this project. Please contact Carla Dagnino at either cdagnino@ncdot.gov or (919) 707-6110 if you have any questions or need additional information.

Please contact Carla Dagnino at either cdagnino@ncdot.gov or (919) 707-6110 if you have any questions or need additional information.

Sincerely,

for Philip S. Harris III, P.E., C.P.M.
Environmental Analysis Unit Head

STATEMENT OF AUTHORIZATION

11. I hereby authorize, _____ to act in my behalf as my agent in the processing of this application and to furnish, upon request, supplemental information in support of this permit application.

_____ _____
SIGNATURE OF APPLICANT DATE

NAME, LOCATION, AND DESCRIPTION OF PROJECT OR ACTIVITY

12. PROJECT NAME OR TITLE (see instructions)
U-3109 (Mebane Bypass)

13. NAME OF WATERBODY, IF KNOWN (if applicable)	14. PROJECT STREET ADDRESS (if applicable)
MoAdams Creek, Back Creek, Mill Creek	Address
15. LOCATION OF PROJECT Latitude: °N 36.108733 Longitude: °W -79.286213	City - State- Zip-

16. OTHER LOCATION DESCRIPTIONS, IF KNOWN (see instructions)
State Tax Parcel ID Municipality Mebane
Section - Alamance County Township - Range -

17. DIRECTIONS TO THE SITE
Please see attached vicinity map and cover letter.

18. Nature of Activity (Description of project, include all features)
NCDOT proposes to improve NC 119 from near the Interstate 40/85 (I-40/I-85) interchange southwest of downtown Mebane to the existing SR 1962 (3rd Street) Extension. The project then proceeds onto new location, relocating NC 119 to the west and north of downtown Mebane before tying into existing NC 119 just south of SR 1918 (Mrs. White Lane). The project terminates just north of Mrs. White Lane. The new location portion of NC 119 will be constructed as a four-lane, median-divided facility. Existing NC 119 in the vicinity of I-40/I-85 is proposed to be widened to six-lanes. Y-line improvements are also proposed. The project, also known as the Mebane Bypass, is comprised of two sections. Section A, which is approximately 3.3 miles in length, will begin near the I-85/I-40 interchange and end north of SR 1921/SR 1996 (Mebane Rogers Road/East Stagecoach Road). Section B, which is approximately 1.5 miles in length, will begin north of Mebane Rogers Road/ East Stagecoach Road and end north of Mrs. White Lane.

19. Project Purpose (Describe the reason or purpose of the project, see instructions)
Please see attached cover letter

USE BLOCKS 20-23 IF DREDGED AND/OR FILL MATERIAL IS TO BE DISCHARGED

20. Reason(s) for Discharge
Impacts will result from improving the existing roadway and shoulders, construction of new roadway on new location, and work associated with secondary roads along the project.

21. Type(s) of Material Being Discharged and the Amount of Each Type in Cubic Yards:

Type Amount in Cubic Yards	Type Amount in Cubic Yards	Type Amount in Cubic Yards

The Application must be signed by the person who desires to undertake the proposed activity (applicant) or it may be signed by a duly authorized agent if the statement in block 11 has been filled out and signed.

18 U.S.C. Section 1001 provides that: Whoever, in any manner within the jurisdiction of any department or agency of the United States knowingly and willfully falsifies, conceals, or covers up any trick, scheme, or disguises a material fact or makes any false, fictitious or fraudulent statements or representations or makes or uses any false writing or document knowing same to contain any false, fictitious or fraudulent statements or entry, shall be fined not more than $10,000 or imprisoned not more than five years or both.

Environmental Quality

ROY COOPER
Governor

February 16, 2017

Mr. Philip S. Harris, III, P.E., CPM
Project Development and Environmental Analysis Unit
North Carolina Department of Transportation
1598 Mail Service Center
Raleigh, North Carolina 27699-1598

Dear Mr. Harris:

Subject: Mitigation Acceptance Letter:

U-3109B, Mebane Bypass – NC 119 Relocation from North of SR 1921 / SR 1996 (Mebane Rogers Road / East Stagecoach Road) to North of SR 1918 (Mrs. White Lane), Alamance County

The purpose of this letter is to notify you that the Division of Mitigation Services (DMS) will provide the compensatory stream and wetland mitigation for the subject project. Based on the information supplied by you on February 13, 2017, the impacts are located in CU 03030002 of the Cape Fear River basin in the Central Piedmont (CP) Eco-Region, and are as follows:

Cape Fear 03030002 CP	Stream			Wetlands			Buffer (Sq. Ft.)	
	Cold	Cool	Warm	Riparian	Non-Riparian	Coastal Marsh	Zone 1	Zone 2
Impacts (feet/acres)	0	0	1,306.0	0.51	0	0	0	0

*Some of the stream and/or wetland impacts may be proposed to be mitigated at a 1:1 mitigation ratio. See permit application for details.

The impacts and associated mitigation needs were under projected by the NCDOT in the 2017 impact data. DMS will commit to implement sufficient compensatory stream mitigation credits to offset the impacts associated with this project as determined by the regulatory agencies using the delivery timeline listed in Section F.3.c.iii of the In-Lieu Fee Instrument dated July 28, 2010. If the above referenced impact amounts are revised, then this mitigation acceptance letter will no longer be valid and a new mitigation acceptance letter will be required from DMS.

If you have any questions or need additional information, please contact Beth Harmon at 919-707-8420.

Sincerely,

James B. Stanfill
Credit Management Supervisor

South Buffalo Creek Mitigation Site
ONEID 041-009

The South Buffalo Creek mitigation site is located in Guilford County within the USGS hydrologic unit 03030002 of the Cape Fear River. NCDOT acquired a 31.73 acres parcel to mitigate for unavoidable, jurisdictional impacts associated with TIP I-2402, U-2525 and I-2201F/E. This parcel produced 16.2 acres of Riparian Wetland Preservation and 15.53 acres of Riparian Wetland Restoration. Monitoring requirements were performed from 1999 to 2003 and the site was closed out in 2004. Table 1 shows the final mitigation quantities approved for the site. The site has been placed on the NCDOT On-site Debit Ledger for use within HUC 03030002. Table 2 indicates all mitigation debits that have occurred per regulatory agency approval.

In order to offset an additional 0.01 acres of unavoidable impacts on U-3109A at Site 19, NCDOT will be debiting the South Buffalo Creek Mitigation Site at for 0.01 acres of impact at a 1:1 ratio, totaling 0.01 acres of mitigation.

Table 1. Mitigation Quantities Approved

HUC	Mitigation Type	Starting Amount (AC)	Additional Notes
3030002	Riparian Wetland Preservation	16.2	
3030002	Riparian Wetland Restoration	15.53

An overview of the project and watershed was provided. The proposed roadway will cross Mill Creek and one (1) unnamed tributary to Mill Creek. The project is within a Water Supply-II (WS-II) watershed and located along the ½ mile Critical Area (CA) buffer of the water supply reservoir. April Norton asked if the project was actually within the CA. Bill Elam stated that NCDOT policy is to provide protection measures for project within a ½ mile of the ½ mile CA buffer. This project will include protection measures such as Hazardous Spill Basin (HSB) and grass swales to the maximum extent practical (MEP). This project has been grandfathered and the Jordan Lake Buffer Rules do not apply.

The meeting included a discussion of all jurisdictional areas on each plan sheet. The following is a description of the topics discussed on each sheet:

- **Plan Sheet 4:** No jurisdictional areas.
- **Plan Sheet 5:** A 6'x 6' reinforced concreate box culvert (RCBC) will be constructed to provide conveyance of the unnamed tributary to Mill Creek, Jurisdictional Stream SA. The culvert will include sills and baffles and will be buried one-foot below existing surface. DRMP's hydraulic design will include HSBs to the MEP for outfalls to this stream.

www.DRMP.com

- **Plan Sheet 6:** The proposed roadway will include a three span, 150' concrete girder bridge over Mill Creek. Bents will be placed outside the stream. Spill throughs will be at 1.5:1. DRMP's hydraulic design will attempt to provide HSBs to the MEP for outfalls to this stream.

  A construction specification note will be added that the bridge is to be construction from each side. No causeway is to be used for construction.

- **Plan Sheet 7:** The crossing at Jurisdictional Stream SB will include a 24" cross pipe approximately 220 feet in length at 4.9% slope. The pipe will not be buried. Riprap end treatment may be used in channel based on outfall analysis. Headwalls will not be used on pipes less than 36". DRMP will look at converting the 18" connecting pipe into a special cut ditch. Mitigation will need to include dissipater pad if used.

  David Bailey of USACE stated that this was a high quality stream.

- **Plan Sheet 8:** The crossing at Jurisdictional Wetland WA and Jurisdictional Stream SC will include a 24" cross pipe approximately 140 feet in length at 2.8% slope. Pipe will not be buried. A specification note for construction will be included for all cross-pipe inverts to be placed at existing ground elevation for all wetlands to avoid affecting wetland hydroperiod. If construction disturbances impact the majority of the wetland, the wetland may be considered a total take. The stream is a low-quality feature and may not require mitigation.

  The crossing at Jurisdictional Wetland WB will include an 18" cross pipe approximately 140 feet in length at 1.4% slope. The pipe will not be buried. No headwall and standard riprap pad at outfall. Cross pipe inverts to be placed at existing ground elevation for all wetlands.

  The crossing at Jurisdictional Wetland WC will include an 18" to 24" cross pipe approximately 115 feet in length at 1.1% slope. The pipe will not be buried. No headwall and standard riprap pad at outfall. Cross pipe inverts to be placed at existing ground elevation for all wetlands.

- **Plan Sheet 9:** All jurisdictional features are outside of the Right of Way.

- **Plan Sheet 10:** The crossing at Jurisdictional Wetland WA and Jurisdictional Stream SI will include a 24" to 30"cross pipe approximately 170 feet in length at 0.3% slope. The stream is braided at this location and two lines are shown on survey. Only main channel length is to be used for mitigation calculation. Note this feature on permit drawings. Wetland will be total take.

  The crossing at Jurisdictional Stream SJ will include a 42" to 48" cross pipe approximately 130 feet at 1.8% slope. Outfall stabilization to include dissipater pad and riprap in channel. The gap in stream channel is where the stream goes underground. No mitigation for the length of stream gap.

- **Plan Sheet 11:** All jurisdictional features outside of Right of Way.

DRMP will begin working on permit drawings upon completion and submittal of hydraulics plans (65%) on December 5, 2017.

4C Meeting will be scheduled for January 2018.

Permit drawings to be completed by January 31, 2018.

Permit package to be submitted by March 1, 2018.

Let date: July 17, 2018. 4-week advertisement for construction.

DRMP Job #: 16-0264.001 Date: February 18, 2018

To: Craig Lee, P.E.

From: Ryan Mitchell, P.E.

Subject: U-3109B – 4C Merger Meeting, Division 7, Alamance County

A 4C Merger Meeting was held on February 15, 2018 at 3:00 pm in the NCDOT Century Center Complex, Structures Conference Room 'C' in Raleigh, NC. Those in attendance were:

Bill Elam	NCDOT – Hydraulics Unit	919-707-6718	belam@ncdot.gov
Mark Staley (phone)	NCDOT – REU	919-707-2948	mstaley@ncdot.gov
April Norton	DWR	919-707-9111	April.norton@ncdenr.gov
Jim Mason	NCDOT – ECAP	919-707-6136	Jsmason@ncdot.gov
David Teague	NCDOT – Geotech	919-707-6877	dteague@ncdot.gov
Piotr Stojda	NCDOT – Roadway	919-707-6322	pstojda@ncdot.gov
Nick Lineberger	NCDOT – Cong. Mgmt.	919-814-5079	nclineberger@ncdot.gov
David E. Bailey	USACE	919-554-4884 x30	David.bailey2@asce.army.mil
Patty Eason (phone)	NCDOT – Division 7	336-4887-0000	peason@ncdot.gov
Chris Haire	DRMP	919-230-7857	chaire@drmp.com
Ryan Mitchell	DRMP	919-650-7859	rmitchell@drmp.com

An overview and update of the project was provided. The proposed roadway will cross Mill Creek and one (1) unnamed tributary to Mill Creek. The project is within a Water Supply-II (WS-II) watershed and located along the ½ mile Critical Area (CA) buffer of the water supply reservoir. This project will include protection measures such as Hazardous Spill Basin (HSB) and grass swales to the maximum extent practical (MEP). This project has been grandfathered and the Jordan Lake Buffer Rules do not apply.

The meeting included a discussion of all jurisdictional areas impacted by the project. The following is a description of the topics discussed at each site:

- **Site 1:** A 12'x 6' reinforced concreate box culvert (RCBC) will be constructed to provide conveyance of the unnamed tributary to Mill Creek, Jurisdictional Stream SA. The culvert will include sills and baffles and will be buried one-foot below existing surface. The hydraulic design includes HSBs for outfalls to this stream.

  David Baily asked that the sill and baffle detail be added to the culvert profile sheet.

  David Bailey and Jim Mason discussed if mitigation was needed for surface water impacts at the downstream end of the culvert where riprap is to be installed in the stream bed. Follow-up determination is to be provided by Jim Mason.

- **Site 2:** The proposed roadway will include a single span, 160' steel girder bridge over Mill Creek. Spill throughs will be at 1.5:1. Hydraulic design will include HSBs for outfalls to this stream.

  Bridge bents from revised bridge design to be removed from final permit plans.

1.833.811.3767
www.DRMP.com

- **Site 3:** The crossing at Jurisdictional Stream SB will include a 42" cross pipe with headwall on upstream end. The pipe will not be buried. Riprap end treatment to be used for pipe outfall.
- **Site 4 and 5:** The crossing at Jurisdictional Wetland WA and Jurisdictional Stream SC will include a 30" cross pipe. Pipe will not be buried. No headwall and standard riprap pad at outfall. The location of the Jurisdiction Stream on the plans will be revised by Location and Survey to match the pipe outfall location.

  David Bailey stated that compensatory mitigation will not be required for Stream SC impacts due to low aquatic function. 2:1 mitigation will be required for impacts to Wetland WA.
- **Site 6:** The crossing at Jurisdictional Wetland WB will include a 30" cross pipe. The pipe will not be buried. No headwall and standard riprap pad at outfall. Cross pipe inverts to be placed at existing ground elevation for all wetlands. Excavation for ditches in wetland areas will be minimal (approx. 4"-6"). The location of the Wetland WB on the plans will be revised to match the pipe outfall location.

  David Bailey noted that ditch detail "F" is not found on the ditch detail sheet. The call out for these ditches will be revised to refer to ditch detail "N".
- **Site 7:** The crossing at Jurisdictional Wetland WC will include a 36" cross pipe with headwall on upstream end. The pipe will not be buried. Riprap end treatment to be used for pipe outfall.

  Wetland fill hatching to be added for rip rap outfall and accounted for in impact summary table.

  Wetland boundary to be extended on south end of wetland to reflect actual boundary.

  Explanation for why alignment was changed to this location needs to be added to permit narrative.

ACTION ITEMS

DRMP: Revise permit plans in accordance with comments stated in these meeting minutes.

NCDOT:

- Revise WB and WC wetland boundaries in WEX CADD file.
- Revise location of Jurisdictional Stream SC in FS CADD file.
- Determine mitigation needs for rip rap in stream bed for 12'x6' culvert outlet.

End of Memorandum

Cates Farm On-Site Mitigation Meeting Minutes

On Tuesday, December 5, 2017, representatives of the USACE, NCDWR, and NCDOT met on the Cates Farm property to review the proposed mitigation areas. Present were David Bailey, Monte Matthews, Andrea Hughes, Kim Browning, April Norton, Ginny Baker, LeiLani Paugh, Jim Mason, and Chris Underwood. What follows is a summary of what was discussed at each stream reach, relating to credit ratios and what NCDOT proposes to do for mitigation credit.

We started at Reach 1 (see map) and walked downstream in order to see the condition of the channel, in particular the optic fiber/cattle crossing. The stream was fairly stable with little sign of active erosion. There were a couple of beaver dams on the upstream part of the reach. Credit ratios discussed ranged from 3.5-3:1 with a lower ratio applicable to a buffer 75 feet or greater. Todd's extra buffer calculator would come into play here. There is no credit for the fiber optic easement. We discussed that monitoring for seven years would be required for plantings with years 4 and 6 being visual monitoring only.

Some of the reaches on the property exhibits evidence of prior damage due to cattle previously having access to the streams. These areas have started recovery on their own since the cattle are being pastured in non-easement areas. LeiLani described to the group what the farm was like when NCDOT initially started talking with the landowner. This was a large part of the discussion during this field review and has a large bearing on the ratios that were given for the reaches discussed.

At Reach 2 a Regenerative Stormwater Conveyance was discussed for the upper end of the reach but was decided that it wasn't necessary. We walked in to the intermittent/ephemeral break to view the channel condition. The channel is located close to the eastern property line and the protected buffer is less than 50 feet in a couple of places. Credit is to be given only in the downstream portion where there is at least 50 feet of buffer on both sides. The natural grade control near the perennial point, downstream, was the start of the 5:1 credit section. From the natural grade control to the limits of standard buffer, upstream, the credit ratio will be 7.5:1. The perennial section measures 150 feet and the intermittent section measures 230 feet.

We then crossed Mill Creek to go look at the northern reaches of the conservation easement. That property is now owned by the Town of Mebane, but NCDOT retains a conservation easement. We looked at Reach 3 and determined that a 3:1 ratio would be applicable due to the proposed replanting and fencing. No credit for the ephemeral section.

There was a discussion of the Town of Mebane wanting to construct a greenway within our easement on the north side of Mill Creek in conjunction with a disc golf course. Andrea mentioned that the USACE didn't like trails through easements and any area within the easement that had a trail would be removed from the credit area. LeiLani stated that we have had trails within our easements before. The overall consensus of the regulatory agencies was there would be no credit allowed if trails were constructed. LeiLani left at this point for another meeting.

We discussed Reach 5 but didn't visit it. It is ephemeral grading to intermittent with a potential wetland in the upper part of the ephemeral portion of the channel. NCDOT will perform a wetland delineation to confirm the presence of a wetland. The ratio discussed for Reach 5 was 5:1. On a later visit by NCDOT, It was determined that there was no wetland present. No credit for the ephemeral section.

We walked up to Reach 4 to determine the stability and substrate of the channel. Just within the Duke Power ROW, the substrate was cobble and bedrock and that is representative of the entire reach. It is also intermittent. The ratios determined for this reach and Reach 6 were 5:1. No credit for the ephemeral section.

We then walked the buffer down to Mill Creek so the team could see the buffer of the north side of Mill Creek. We didn't walk to Reach 7 but relied upon the recollections of Dave, Jim, and Chris who had visited it on an earlier date. They described the reach as the highest quality stream on the property and one of the better in the county. A ratio of 3.5:1 was determined for that reach. It was discussed that some sort of BMP be installed for the upper end of Reach 7 since the road abuts the easement there. Dave stated that the hydro plans showed a riprap pad there, which should be sufficient.

For Mill Creek, the initial thoughts of the team were for a 5:1 ratio for the entire reach. However, due to the lower quality of the channel, 7.5:1 was considered. It was determined that NCDOT should propose a ratio and justify it. Ways to achieve a lower ratio included bridge abutment removal, log jam removal, planting a higher percentage of the buffer, or protecting a wider than standard buffer. No credit unless buffer is on both sides.

We broke for lunch at 1:40 PM.

Reach	Amount and Ratio	Potential Amount of Credit
1	1,016 lf and 0.59 acre wetland (3.5:1)	290 lf; 0.197 acres wetland
2	150 lf and 230 lf (5:1 and 7.5:1)	61 lf
3	308 lf (3.1)	103 lf
4	489 lf (5:1)	98 lf
5	158 lf (5:1)	32 lf
6	359 lf (5:1)	72 lf
7	770 lf (3.5:1)	220 lf
Mill Creek	4,352 lf (7.5:1 to 5:1)	580-870 lf
Total	7,832 lf and 0.59 acre of wetland	1456-1746 lf; 0.197 ac. wetland

We are waiting on "Todd's Extra Buffer Calculator" to finalize the credit for Mill Creek.

River Basin(s):	Cape Fear			**CAMA County?**	No		
Wetlands within Project Limits?	Yes						

Project Description

Project Length (lin. miles or feet):	1.424 miles	**Surrounding Land Use:**	Undeveloped/Open Land

	Proposed Project	**Existing Site**
Project Built-Upon Area (ac.)	6.5 ac.	N/A ac.
Typical Cross Section Description:	One (1) 12' travel lanes each direction. 4' paved shoulders with grass roadway ditches, both sides. 10' paved shoulders with guardrail.	
Annual Avg Daily Traffic (veh/hr/day):	Design/Future: 10,983 vpd Year: 2038	Existing: 8,809 Year: 2018
General Project Narrative: (Description of Minimization of Water Quality Impacts)	The U-3109B project is a new alignment between SR 1921 (Mebane Rogers/ Stage Coach Rd) and SR 1918 (Mrs. White Ln). Approximately 5,800 linear feet of grass swales have been incorporated in roadside ditches, where possible, to reduce the velocity and promote the infiltration of runoff. Five hazardous spill basins are proposed to protect against the accidental realease of hazardous material into receiving jurisdictional waters. Riprap at pipe outlets, ditches, and streambanks has been incorporated to minimize erosion on slopes where vegetation will not be adequate. Storm drainage discharging directly to wetlands has been designed to meet non-erosive velocity requirements. NCDOT standards for ground cover, vegetation, and slope stabilization will be adhered to during the life of this project, and will be specified in the NCDOT Erosion and Sediment Control Plan for the project.	

Waterbody Information

Surface Water Body (1):	Mill Creek		**NCDWR Stream Index No.:**	16-18-3-(1.5)		
NCDWR Surface Water Classification for Water Body		**Primary Classification:**	Water Supply II (WS-II)			
		Supplemental Classification:	High Quality Waters (HQW)	(NSW)	CA	
Other Stream Classification:						
Impairments:	None					
Aquatic T&E Species?	No	Comments:				
NRTR Stream ID:	Mill Creek			**Buffer Rules in Effect:**	N/A	
Project Includes Bridge Spanning Water Body?	Yes	**Deck Drains Discharge Over Buffer?**	No	**Dissipator Pads Provided in Buffer?**	N/A	
Deck Drains Discharge Over Water Body?	No	(If yes, provide justification in the General Project Narrative)		(If yes, describe in the General Project Narrative; if no, justify in the General Project Narrative)		
(If yes, provide justification in the General Project Narrative)

*Hazardous spill basins are pollution prevention measures designed for spill containment rather than stormwater treatment. Under Required / Minimum Treatment and Treatment Achieved, provide the minimum required volume and the actual HSB volume, respectively. Refer to the NCDOT Stormwater Best Management Practices Toolbox (2014) for design guidance.

SINGLE BARREL CULVERT LOW FLOW CHANNEL AND SILLS

1 @ 12' x 6' W/SILLS AND BAFFLES
(NOT TO SCALE)

*NOTES:

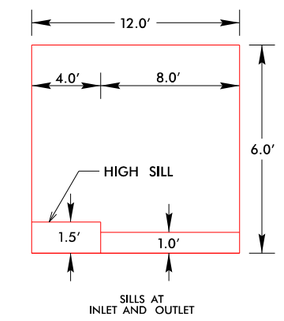
1) NATIVE MATERIAL BETWEEN SILLS/BAFFLES IN THE CULVERT SHALL PROVIDE A CONTINUOUS LOW FLOW CHANNEL. NATIVE MATERIAL CONSISTS OF MATERIAL THAT IS EXCAVATED FROM THE STREAM BED AT THE PROJECT SITE DURING CONSTRUCTION. NATIVE MATERIAL IS SUBJECT TO APPROVAL BY THE ENGINEER AND MAY BE SUBJECT TO PERMIT CONDITIONS.

2) SILLS/BAFFLES ARE TO BE 1.0 FT. WIDE, CAST SEPARATELY AND ATTACHED BY DOWELS.

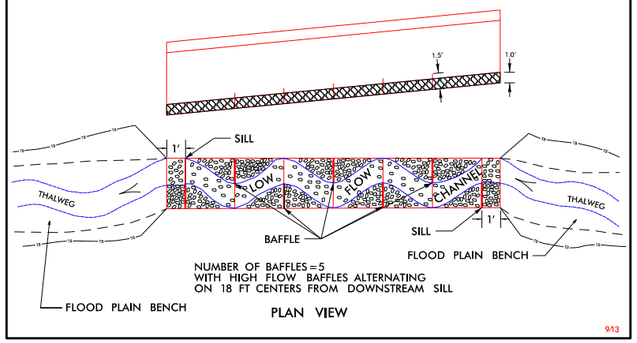
3) TOP OF LOW FLOW SILLS/BAFFLES SHOULD MATCH STREAM BED ELEVATION IN LOW FLOW CHANNEL OF STREAM. (THALWEG)

4) DO NOT SET ELEVATION OF HIGH SILL/BAFFLES ABOVE BANK FULL.

5) NUMBER OF SILL/BAFFLES DETERMINED BY THE ENGINEER.



SILLS AT
INLET AND OUTLET



NUMBER OF BAFFLES = 5
WITH HIGH FLOW BAFFLES ALTERNATING
ON 18 FT CENTERS FROM DOWNSTREAM SILL

- City Line
- Reservation Line
- Property Line
- Existing Iron Pin — EIP
- Property Corner
- Property Monument — ECM
- Parcel/Sequence Number — 123
- Existing Fence Line
- Proposed Woven Wire Fence
- Proposed Chain Link Fence
- Proposed Barbed Wire Fence
- Existing Wetland Boundary — WLB
- Proposed Wetland Boundary — WLB
- Existing Endangered Animal Boundary — EAB
- Existing Endangered Plant Boundary — EPB
- Existing Historic Property Boundary — HPB
- Known Contamination Area: Soil
- Potential Contamination Area: Soil
- Known Contamination Area: Water
- Potential Contamination Area: Water
- Contaminated Site: Known or Potential

BUILDINGS AND OTHER CULTURE:

- Gas Pump Vent or U/G Tank Cap
- Sign — S
- Well — W
- Small Mine
- Foundation
- Area Outline
- Cemetery
- Building
- School
- Church
- Dam

HYDROLOGY:

- Stream or Body of Water
- Hydro, Pool or Reservoir
- Jurisdictional Stream — JS
- Buffer Zone 1 — BZ 1
- Buffer Zone 2 — BZ 2
- Flow Arrow
- Disappearing Stream
- Spring
- Wetland
- Proposed Lateral, Tail, Head Ditch — FLOW
- False Sump

RAILROADS:

- Standard Gauge — CSX TRANSPORTATION
- RR Signal Milepost — MILEPOST 35
- Switch — SWITCH
- RR Abandoned
- RR Dismantled

RIGHT OF WAY:

- Baseline Control Point
- Existing Right of Way Marker
- Existing Right of Way Line
- Proposed Right of Way Line — RW
- Proposed Right of Way Line with Iron Pin and Cap Marker — RW
- Proposed Right of Way Line with Concrete or Granite R/W Marker — RW
- Proposed Control of Access Line with Concrete C/A Marker — CA
- Existing Control of Access — CA
- Proposed Control of Access — CA
- Existing Easement Line — E
- Proposed Temporary Construction Easement — E
- Proposed Temporary Drainage Easement — TDE
- Proposed Permanent Drainage Easement — PDE
- Proposed Permanent Drainage / Utility Easement — DUE
- Proposed Permanent Utility Easement — PUE
- Proposed Temporary Utility Easement — TUE
- Proposed Aerial Utility Easement — AUE
- Proposed Permanent Easement with Iron Pin and Cap Marker

ROADS AND RELATED FEATURES:

- Existing Edge of Pavement
- Existing Curb
- Proposed Slope Stakes Cut — C
- Proposed Slope Stakes Fill — F
- Proposed Curb Ramp — CR
- Existing Metal Guardrail
- Proposed Guardrail
- Existing Cable Guiderail
- Proposed Cable Guiderail
- Equality Symbol
- Pavement Removal

VEGETATION:

- Single Tree
- Single Shrub
- Hedge
- Woods Line
- Orchard
- Vineyard — Vineyard

EXISTING STRUCTURES:

MAJOR:

- Bridge, Tunnel or Box Culvert — CONC
- Bridge Wing Wall, Head Wall and End Wall — CONC WW

MINOR:

- Head and End Wall — CONC HW
- Pipe Culvert
- Footbridge
- Drainage Box: Catch Basin, DI or JB — CB
- Paved Ditch Gutter
- Storm Sewer Manhole — S
- Storm Sewer — S

UTILITIES:

POWER:

- Existing Power Pole
- Proposed Power Pole
- Existing Joint Use Pole
- Proposed Joint Use Pole
- Power Manhole — P
- Power Line Tower
- Power Transformer
- U/G Power Cable Hand Hole
- H-Frame Pole
- U/G Power Line LOS B (S.U.E.*) — P
- U/G Power Line LOS C (S.U.E.*) — P
- U/G Power Line LOS D (S.U.E.*) — P

TELEPHONE:

- Existing Telephone Pole
- Proposed Telephone Pole
- Telephone Manhole — T
- Telephone Pedestal — T
- Telephone Cell Tower
- U/G Telephone Cable Hand Hole — HH
- U/G Telephone Cable LOS B (S.U.E.*) — T
- U/G Telephone Cable LOS C (S.U.E.*) — T
- U/G Telephone Cable LOS D (S.U.E.*) — T
- U/G Telephone Conduit LOS B (S.U.E.*) — TC
- U/G Telephone Conduit LOS C (S.U.E.*) — TC
- U/G Telephone Conduit LOS D (S.U.E.*) — TC
- U/G Fiber Optics Cable LOS B (S.U.E.*) — T FO
- U/G Fiber Optics Cable LOS C (S.U.E.*) — T FO
- U/G Fiber Optics Cable LOS D (S.U.E.*) — T FO

WATER:

- Water Manhole — W
- Water Meter
- Water Valve
- Water Hydrant
- U/G Water Line LOS B (S.U.E.*) — W
- U/G Water Line LOS C (S.U.E.*) — W
- U/G Water Line LOS D (S.U.E.*) — W
- Above Ground Water Line — A/G Water

TV:

- TV Pedestal — C
- TV Tower
- U/G TV Cable Hand Hole — HH
- U/G TV Cable LOS B (S.U.E.*) — TV
- U/G TV Cable LOS C (S.U.E.*) — TV
- U/G TV Cable LOS D (S.U.E.*) — TV
- U/G Fiber Optic Cable LOS B (S.U.E.*) — TV FO
- U/G Fiber Optic Cable LOS C (S.U.E.*) — TV FO
- U/G Fiber Optic Cable LOS D (S.U.E.*) — TV FO

GAS:

- Gas Valve
- Gas Meter
- U/G Gas Line LOS B (S.U.E.*) — G
- U/G Gas Line LOS C (S.U.E.*) — G
- U/G Gas Line LOS D (S.U.E.*) — G
- Above Ground Gas Line — A/G Gas

SANITARY SEWER:

- Sanitary Sewer Manhole
- Sanitary Sewer Cleanout
- U/G Sanitary Sewer Line — SS
- Above Ground Sanitary Sewer — A/G Sanitary Sewer
- SS Forced Main Line LOS B (S.U.E.*) — FSS
- SS Forced Main Line LOS C (S.U.E.*) — FSS
- SS Forced Main Line LOS D (S.U.E.*) — FSS

MISCELLANEOUS:

- Utility Pole
- Utility Pole with Base
- Utility Located Object
- Utility Traffic Signal Box — S
- Utility Unknown U/G Line LOS B (S.U.E.*) — ?UTL
- U/G Tank; Water, Gas, Oil
- Underground Storage Tank, Approx. Loc. — UST
- A/G Tank; Water, Gas, Oil
- Geoenvironmental Boring
- U/G Test Hole LOS A (S.U.E.*)
- Abandoned According to Utility Records — AATUR
- End of Information — E.O.I.
