Subject: RE: Request for Additional Information: DWR 20250109 V3 - Hurricane Helene I-40 Pigeon River Gorge Emergency Relief Project

Hi Amy,
Please see NCDOT's responses to DWR's questions in the table below. Due to the size of the attachments, they are located in one response package at the following link:
https://xfer.services.ncdot.gov/pdea/Temp/I-40/DWR%20Additional%20Information.pdf

DWR Question: 1. Please provide a more detailed justification as to why a haul road adjacent to S1-SAA would result in more impacts to water resources and stream S1-SAA and S1-SAB than the proposed option of the haul road on top of stream S1-SAA and S1-SAB. If the preferred alternative of placing the haul road on the stream is the selected alternative, DWR will require mitigation for stream loss as provided in the application. [15A NCAC 02H .0506(b)(1)]
NCDOT Response: Although this method of temporary impact to a stream is atypical, NCDOT believes in this situation, it provides the least overall impact and provides for the best opportunity for a successful restoration. Justification for this method includes the following: -Minimization to National Forest resources using this corridor: By using this valley to access the borrow site, this path would provide the most direct path to the borrow site and the project. The alternative to using this valley, would be to improve miles of existing US Forest Service roads. This alternative would have significantly higher impacts to water resources as well as significant and undesirable impacts to the National Forest. -The valley carrying this stream is quite steep. If NCDOT used traditional methods of cutting a road adjacent to the stream, this impact would result in significant vertical cuts (measured in 100's of feet) and would have a disturbance width of near 1,000 linear feet in the valley. Additionally, steep rock cuts will continue to be an erosion and sedimentation control issue throughout the life of the project for this method. By avoiding the need to introduce these unstable cuts, the haul road corridor will be easier to maintain from a sedimentation and erosion control standpoint. By temporarily piping and covering the stream, then placing the road on top of this facility, this reduces the horizontal disturbance width to this valley to approximately 110 linear feet.

DWR Question: 2. Will the mining operation generate wastewater or stormwater that will be discharged to surface waters?
NCDOT Response: The borrow site will have stormwater that will eventually be discharged into surface waters after treatment.
DWR Question (sub-divided): Please provide a plan sheet that indicates the location of proposed stormwater measures for the borrow pit area. [15A NCAC 02H .0506(b)(1) and 15A NCAC 02H .0502(a)(9)].

NCDOT Response:
Please find attached "**Erosion Control at Borrow Site**".

DWR Question:
3. Please show the footprint of the proposed retaining wall through the project area

NCDOT Response:
The proposed wall is located on the submitted set of drawings, and attached is a marked up set of drawings highlighting the wall for clarity, titled "**Drawings with Wall Highlighted."**
The wall is highlighted in yellow. Wall impacts are highlighted in red.

Additionally, the impact summary table has been excerpted on each page to clarify the quantify the wall impact.

As previously noted, impacts are shown using the "scour zone limits" of the Pigeon River, as locating the ordinary high water mark post-Helene is not possible. Therefore, these drawings display a "worst case scenario" and are likely much lower than indicated.

The total proposed wall impacts to the Pigeon River are 12,116 linear feet.

DWR Question (sub-divided):
and provide a detail of the proposed retaining wall where the wall will be constructed below the ordinary high water mark, resulting in stream or wetland impacts, on your plan sheet.

NCDOT Response:
Please find attached "**Wall- River Impact Detail**"

DWR Question (sub-divided):
Please also include information as to how tributaries to the Pigeon River will flow to and through the proposed retaining wall. [15A NCAC 02H .0506(b)(1) and 15A NCAC 02H .0502(a)(9)]

NCDOT Response:
Tributaries that flow from I-40 through various structures will discharge into the Pigeon River in a similar manner as the Pre-Helene Condition.

Pipes will be extended or modified so they flow through the proposed wall.

NCDOT will ensure discharge does not cause erosion or destabilization of the streambank, if appropriate.

DWR Question:
4. Mitigation is required for losses of equal to or greater than 300 linear feet of perennial stream and (equal to or greater than 1/10 acre of wetlands). Stream S1-SAD is a perennial stream, which NCDOT has proposed a total of 414 linear feet of permanent fill in two locations – Site 34 (244 LF) and Site 37 (170 LF). Please provide a mitigation plan that conforms to the requirements of 15A NCAC 02H.

NCDOT Response:
The final impact table from the permit application cover letter has been updated and included as an attachment titled, "**Revised Cover Letter Impact Summary for DWR Mitigation**."
Updated values are depicted in red for clarity.

Note, this does not change the requested mitigation for the project.

Subject: Request for Additional Information: DWR 20250109 V3 - Hurricane Helene I-40 Pigeon River Gorge Emergency Relief Project

Dear Mr. Turchy,

On June 5, 2025, the Division of Water Resources (Division) received your application requesting an Individual Water Quality Certification from the Division for the subject project. The Division has determined that your application is incomplete and cannot be processed. The application is on-hold until all of the following information is received:

1. Please provide a more detailed justification as to why a haul road adjacent to S1-SAA would result in more impacts to water resources and stream S1-SAA and S1-SAB than the proposed option of the haul road on top of stream S1-SAA and S1-SAB. If the preferred alternative of placing the haul road on the stream is the selected alternative, DWR will require mitigation for stream loss as provided in the application. [15A NCAC 02H .0506(b)(1)]

2. Will the mining operation generate wastewater or stormwater that will be discharged to surface waters? Please provide a plan sheet that indicates the location of proposed stormwater measures for the borrow pit area. [15A NCAC 02H .0506(b)(1) and 15A NCAC 02H .0502(a)(9)]

3. Please show the footprint of the proposed retaining wall through the project area and provide a detail of the proposed retaining wall where the wall will be constructed below the ordinary high water mark, resulting in stream or wetland impacts, on your plan sheet. Please also include information as to how tributaries to the Pigeon River will flow to and through the proposed retaining wall. [15A NCAC 02H .0506(b)(1) and 15A NCAC 02H .0502(a)(9)]

4. Mitigation is required for losses of equal to or greater than 300 linear feet of perennial stream and (equal to or greater than 1/10 acre of wetlands). Stream S1-SAD is a perennial stream, which NCDOT has proposed a total of 414 linear feet of permanent fill in two locations – Site 34 (244 LF) and Site 37 (170 LF). Please provide a mitigation plan that conforms to the requirements of 15A NCAC 02H.

Pursuant to Title 15A NCAC 02H .0502(e), the applicant shall furnish all of the above requested information for the proper consideration of the application. Please respond in writing within 30 calendar days of receipt of this letter by sending one (1) copy of all of the above requested information to the 401 & Buffer Permitting Branch, 1617 Mail Service Center, Raleigh, NC 27699-1617 OR by submitting all of the above requested information through this link: https://edocs.deq.nc.gov/Forms/Supplemental-Information-Form (note the DWR# requested on the link is referenced above).

If all of the requested information is not received within 30 calendar days of receipt of this letter, the Division will be unable to approve the application and it will be denied as incomplete. The denial of this project will necessitate reapplication to the Division for approval, including a complete application package and the appropriate fee.

Please be aware that you have no authorization under the Section 401 of the Clean Water Act/ Isolated Wetlands and Isolated Waters Rules/Buffer Rules for this activity and any work done within waters of the state may be a violation of North Carolina General Statutes and Administrative Code.

Please contact me if you have any questions or concerns.

Sincerely,

Amy Annino

Erosion and Sedimentation Control Plans

NOTES:
- MINIMUM 10' SETBACK FROM ALL PROPERTY LINES.
- SKAGGS METHOD HAS BEEN USED FOR THIS BORROW PIT AND IT WAS DETERMINED THAT EXCAVATION OF THE BORROW PIT IS OUTSIDE THE LATERAL OFFSET OF THE WETLAND.
- NO ACTIVITIES WITHIN HIGH QUALITY WATER ZONES.
- THE CONSTRUCTION OF THE HAUL ROAD WILL ALWAYS BE IN A MANNER THAT DOES NOT TRAP DRAINAGE BEHIND IT. THIS CAN BE ACHIEVED BY:
  1) NOT USING CUT DITCHES ALONG THE ROAD;
  2) USING THE NORMAL CROWN TYPICAL CROSS SECTION PROVIDED.

CALCULATIONS:
- RISER BASIN
Q = Q10peak = CIA = 0.2*3.97in/hr* 39.1 ac = 31.1 cfs
Adisturb = 25.8 ac
AREA REQUIRED = A = 435*Q = 435*31.1 = 13,529 ft^2
AREA PROVIDED = 13,530 ft^2
VOLUME REQUIRED = V = 1,800*Adisturb.
= 1,800*25.8ac = 46,440 FT^3
VOLUME PROVIDED = 68,490 FT^3
DEPTH (D) = 8'
H = 1', T = 6', E = 6.0', F = 1.0', B = 8'
X = 5.5', Y = 1.0', X1 = 5.0', Y1 = 1.0'
ORIFFICE DIAMETER = 3.875"
SKIMMER SIZE = 4"
OUTLET PIPE = 24"

DITCH SHEAR STRESS = 62.4*SLOPE*DEPTH

CWD1: 62.4*0.36*0.22 = 4.93 lb/ft^2
V = 5.56 ft/s, USE EC MATTING LINER

CWD2: 62.4*0.06*0.37 = 1.40 lb/ft^2
V = 5.56 ft/s, USE EC MATTING LINER

TSD1: 62.4*0.015*0.70 = 0.64 lb/ft^2
V = 4.0 ft/s, EC MATTING LINER

TSD2: 62.4*0.262*0.34 = 5.6 lb/ft^2
V = 11.4 ft/s, EC MATTING LINER

DURING CONSTRUCTION:
- ASSURE THAT APPROVED SEDIMENT CONTROLS ARE ADEQUATELY INSTALLED.
- OCCASIONALLY CHECK THE SITE FOR PLAN CONFORMANCE AND EITHER REVISE THE PLAN OR CORRECT THE SITE.
- CHECK SLOPE RATES DURING CONSTRUCTION. SLOPES SHOULD BE BUILT TO PLAN RATES DURING THE INITIAL DISTURBANCE TO PROVIDE THE BEST OPPORTUNITY FOR PERMANENT STABILITY AND LIMIT THE NEED FOR TEMPORARY SEEDING. ALL STOCK PILES THAT LAY IDLE FOR MORE THAN 14 DAYS SHOULD BE MATTED OR TEMPORARY SEEDED UNLESS BARE ROCK IS EXPOSED. STOCK PILES SHOULD RETAIN 2:1 SIDE SLOPES.
- BUILD CONSTRUCTION ENTRANCES ON SITE TO REFLECT EXISTING ROADS. THE CONSTRUCTION ENTRANCES SHOULD BE INSTALLED PER GUIDELINES.

FINAL INSPECTION:
- COMPARE THE FINAL CONDITION OF THE SITE TO THE PLAN AND AMEND THE PLAN OR THE SITE IF DIFFERENCES EXIST.
- ASSURE THAT A MINIMUM OF 6" OF SOIL, CAPABLE OF SUPPORTING VEGETATION, IS COVERING WASTE. IF NCDOT/PROPERTY OWNER IS AMICABLE TO ROCK AS A SURFACE COURSE, VEGETATION CAN BE OMITTED.
- ENSURE NO STANDING POOLS OF WATER REMAIN.
- ENSURE THAT ALL TEMPORARY SEDIMENT CONTROLS HAVE BEEN REMOVED.
- ENSURE THAT THE FINAL CONTOURS ARE COMPATIBLE WITH THE SURROUNDING TOPOGRAPHY.
- IN WRITING, NOTIFY THE PROPERTY OWNER THAT THE PROJECT IS COMPLETE AND ALL WORK ON THE SITE IS COMPLETE. THIS NOTIFICATION SHALL REFER TO THE PROPERTY OWNER'S SIGNED STATEMENT ALLOWING SITE INSPECTIONS AND ANY REPAIR WORK DURING THE COMING YEAR.

Revised Cover Letter Impact Summary

Permit Site / Plan sheet Page	Stream Name/Status	Status/Class	Perm Fill	Bank Stabilization	Temporary Impact	ACOE Mitigation Required	DWR Mitigation Required	Impact Description/ Avoidance and Minimization
32	S1-SAA	Perennial	--	--	960 (0.326)	960 (1:1)	960 (1:1)	This impact is for the temporary haul road from the Cotton Patch construction yard to the borrow site. NCDOT Proposes 1:1 mitigation for this activity for the temporal loss of stream function during the construction period, potentially lasting 4 years. NCDOT commits to pre-impact stream data collection, including photographs and cross-sections, for reference for stream restoration, and for use to assist in the determination of a successful restoration.
33	SAB	Perennial	--	--	121 (0.021)	121 (1:1)	0	
34	S1-SAD	Perennial	244 (0.006)	--	--	244 (2:1)	~~0~~ **244 (1:1)**	This stream is located inside the borrow pit. It is considered a total loss of waters.
35	S-SAE/S1-SAE-INT	Perennial/ Intermittent	517 (0.012)	--	--	517 (2:1)	517 (1:1)	This stream is located inside the borrow pit. It is considered a total loss of waters.
36	S1-SAE2 INT	Intermittent	48 (0.001)	--	--	48 (2:1)	0	This stream is located inside the borrow pit. It is considered a total loss of waters.
37	S1-SAD	Perennial	170 (0.004)	--	--	170 (2:1)	~~0~~ **170 (1:1)**	This stream is located inside the borrow pit. It is considered a total loss of waters.
