## 1.0 INTRODUCTION

Parcel #10 (Hardin Oil Company Property) in Guilford County is currently occupied by Colfax Service Center located at 9422 West Market Street and adjacent Colfax Gun & Ammo located at 9420 West Market Street, Colfax, Guilford County, North Carolina. The location of the property is shown on **Figures 1 and 2**. The North Carolina Department of Transportation (NCDOT) plans to acquire a portion of this property due to the planned expansion of West Market Street. This report summarizes the results of field and laboratory activities conducted during the Preliminary Site Assessment (PSA) of the subject property. The scope of work executed at the site was performed in general accordance with Solutions-IES proposal NC11017 dated February 11, 2011, and was initiated based on a Notice to Proceed issued by the NCDOT Preconstruction Professional Services Management Unit on February 17, 2011, under contract 7000010453, dated June 25, 2009.

## 2.0 BACKGROUND AND SITE DESCRIPTION

Parcel #10 is currently developed with two commercial buildings occupied by Colfax Service Station at 9422 West Market Street and adjacent Colfax Gun & Ammo at 9420 West Market Street. Two former underground storage tank (UST) facilities, the Colfax Service Station and the Colfax Oil Company, were reported for Parcel #10. The Colfax Service Station was assigned Facility I.D. Number 0-009519 and Groundwater Incident Number 19240. Colfax Oil Company was assigned Facility I.D. Number 0-009524 and Groundwater Incident Number 20028. File reviews were conducted at the North Carolina Department of Environment and Natural Resources (NCDENR) Winston-Salem, North Carolina regional office and the Guilford County Health Department for the referenced incidents.

According to a UST Closure Letter from the file review, five USTs were removed from Facility I.D. Number 0-009519 on March 17, 1999. At that time, the facility was referred to as the Colfax Phillips 66. During the UST closure, petroleum impacted soils were encountered and an additional five feet of soil was excavated to a depth of 16 feet below ground surface (ft bgs). Confirmation soil samples collected during closure indicated the presence of petroleum constituents at one sampling location which exceeded regulatory limits. A Limited Site Assessment (LSA) was initiated in response to the UST closure which identified petroleum contamination in groundwater at the site above regulatory limits. Monitoring wells were installed in 2000 and 2001 to evaluate the extent of the contaminant plume along with soil sampling and free product recovery events in 2001 as part of a Comprehensive Site Assessment (CSA). A single CSA was submitted in April 2004 for both the Colfax Phillips 66 and Colfax Oil Company. The Colfax

Oil Company reportedly had three USTs and two aboveground storage tanks (ASTs) that were also removed in 1999. Two additional orphan USTs were identified in May 2004. During removal, it was observed that the orphan USTs were leaking, contributing to a second groundwater contaminant plume at the Colfax Oil Company/Colfax Service Station site. In June 2006, contamination was detected in an offsite private groundwater supply well and linked to the Colfax Oil Company/Colfax Service Station contaminant plumes. The last correspondence from NCDENR to the current property owner indicated that a Corrective Action Plan is required to be submitted for both incidents. Solutions-IES did not find Corrective Action Plan on file.

The PSA associated with current work at the site was performed within the proposed right-of-way (ROW) and/or easement stretching west from Colfax Gun & Ammo towards Ira Drive along the south side of the Colfax Gun & Ammo store front and south and west sides of the Colfax Service Station building. Work was not performed in areas of the property outside of the proposed ROW and/or easement. Photographs of the site are included in **Appendix A**.

### **3.0 FIELD ACTIVITIES**

Prior to mobilizing to the site to conduct work, Solutions-IES contacted North Carolina One Call and contracted KCI Associates of North Carolina, P.A. (KCI) to locate underground utilities at the site. Pyramid Environmental & Engineering, P.C. (Pyramid) was contracted to perform a geophysical survey, and mobilized to the study area March 3 and March 8, 2011. The geophysical investigation consisted of electromagnetic (EM) induction-metal detection surveys using a Geonics EM61-MK1 metal detection instrument and ground penetrating radar (GPR) surveys using a GSSI SIR-2000 unit equipped with a 400 MHz antenna. Results of the survey suggested that the proposed ROW and/or easement at Parcel #10 does not contain buried metallic USTs. Images of the EM and GPR findings are included in the geophysical report included as **Appendix B**. After a review of the geophysical report, Solutions-IES mobilized to the site on March 28, 2011, to collect soil samples. Nine soil borings were advanced to a depth of 8 feet below ground surface (ft bgs). Soil borings were advanced using a Geoprobe®. The approximate location of the soil borings are displayed in **Figure 3**. The GPS coordinates of the boring locations are included in **Appendix C**.

A Macro-Core® sampler fitted with a dedicated polyvinyl chloride (PVC) liner was used to collect samples at 2-foot intervals. Each soil sample was split into two aliquots. Each aliquot was placed in a

separate resealable plastic bag. One bag was placed on ice for possible laboratory analysis, while the other bag was sealed and placed at ambient temperature for field screening with a flame ionization detector (FID). After approximately 20 minutes to allow accumulation of volatile organic compounds (VOCs) in the headspace of the bag, each sealed bag was scanned with the FID. The FID measurements were entered into the field logbook along with the soil description and any indications of petroleum staining or odor. That information was subsequently transferred onto boring logs. The boring logs are provided in **Appendix D** and the field screening results are summarized in **Table 1**. The field screening results are also summarized on the boring logs.

The subsurface at the site generally consisted of red-brown sandy to silty clays (Unified Soil Classification CL). Soils were dry to moist and groundwater was not encountered in the borings to a depth of 8 ft bgs.

**Table 1** shows the FID field screening results of the soils ranged from not detected to 1.50 parts per million (ppm). A soil sample was collected from each boring at the interval identified in **Table 1** and was placed in laboratory-supplied jars and stored on ice pending courier service to SGS Laboratories in Wilmington, NC. Sample information was recorded on the chain-of-custody form, and the samples were submitted for analysis of Massachusetts Department of Environmental Protection (MADEP) volatile petroleum hydrocarbons (VPH), MADEP extractable petroleum hydrocarbons (EPH), VOCs by EPA Method 8260B and semi-volatile organic compounds (SVOC) by EPA Method 8270D.

## 4.0 LABORATORY RESULTS

The laboratory analytical results from samples collected indicate the presence of VOCs in soil at concentrations above the laboratory reporting limits at Parcel #10. The analytical results are summarized in **Table 2**, and the laboratory report is included in **Appendix E**.

Specifically, diisopropyl ether was detected in borings 10-3 and 10-4 at concentrations of 14.4 and 14.8 micrograms per kilogram ( $\mu\text{g}/\text{kg}$ ), respectively, and methyl *tert*-butyl ether (MTBE) was detected in boring 10-4 at a concentration of 9.70  $\mu\text{g}/\text{kg}$ .

## 5.0 DISCUSSION/CONCLUSIONS

The geophysical survey conducted at the site suggested that no buried metallic objects such as a UST are present within the surveyed portion of the proposed ROW and/or easement. Solutions-IES advanced nine soil borings to a depth of 8 ft bgs. The highest FID reading measured 1.50 ppm in boring 10-4 at a depth of 6 to 8 ft bgs. Soil samples from two of the nine borings (10-3 and 10-4) indicate the presence of VOCs above laboratory limits but below the soil to groundwater maximum soil contaminant concentrations (MSCCs) specified in the *Guidelines for Site Checks, Tank Closure, and Initial Response and Abatement* (UST Section, North Carolina Department of Environment and Natural Resources [NCDENR], Division of Waste Management [DWM], March 1, 2007; Version; Change 3, Effective December 1, 2008).

PSA sampling results indicate that soil is not impacted within the proposed ROW and/or easement area of Parcel #10 in excess of the MSCCs. However, based on historic site data, groundwater is impacted at the Colfax Oil Company/Colfax Service Station site, and may be impacted beneath the proposed ROW and/or easement. The West Market Street expansion project planned by NCDOT at Parcel #10 does not appear to include excavation or groundwater removal during construction activities. However, Solutions-IES recommends that NCDOT be prepared to monitor, transport and dispose of impacted saturated soil/groundwater during construction activities and consider exposure of workers to impacted media should excavation or dewatering become necessary.

## **1.0 INTRODUCTION**

Pyramid Environmental conducted geophysical investigations for Solutions-IES across the proposed Right-of-Way (ROW) portion of the Hardin Oil Company, Inc. property (Parcel 10) located at 9422 West Market Street in Colfax, North Carolina. The Colfax Auto Service Center and the Colfax Gun & Ammo businesses presently operate on the property. The proposed ROW area of Parcel 10 consists primarily of gravel and asphalt-covered surfaces that lie adjacent to the two business buildings.

Conducted on March 3 and 8, 2011, the geophysical investigation was performed as part of the North Carolina Department of Transportation (NCDOT) preliminary site assessment project to determine if unknown, metallic underground storage tanks (UST's) were present beneath the area of interest at Parcel 10. Solutions-IES representative, Ms. Jody Overmyer, P.E. provided site maps that identified the geophysical survey area perimeter to Pyramid Environmental personnel. The survey area has a maximum length and width of 260 feet and 100 feet, respectively. Photographs of the geophysical equipment used in this investigation and the geophysical survey area at the Hardin Oil Company, Inc. property are shown in **Figure 1**.

## **2.0 FIELD METHODOLOGY**

Prior to conducting the geophysical investigation, a 10-foot by 20-foot survey grid was established across the geophysical survey area using measuring tapes and water-based marking paint. These grid marks were used as X-Y coordinates for location control when collecting the geophysical data and establishing base maps for the geophysical results.

The geophysical investigation consisted of electromagnetic (EM) induction-metal detection surveys and ground penetrating radar (GPR) surveys. The EM survey was performed on March 3, 2011 using a Geonics EM61-MK1 metal detection instrument. According to the instrument specifications, the EM61 can detect a metal drum down to a maximum depth of approximately 8 feet. Smaller objects (1-foot or less in size) can be detected to a maximum depth of 4 to 5 feet. All of the EM61 data were

digitally collected at approximately 0.8 foot intervals along northerly-southerly or easterly-westerly parallel survey lines spaced five feet apart. All of the data were downloaded to a computer and reviewed in the field and office using the Geonics DAT61W and Surfer for Windows Version 7.0 software programs.

GPR surveys were conducted on March 8, 2011 across selected areas recording EM61 differential anomalies using a GSSI SIR-2000 unit equipped with a 400 MHz antenna. Data were digitally collected in a continuous mode along X-axis and/or Y-axis survey lines, spaced 2.5 to 5.0 feet apart using a vertical scan of 512 samples, at a rate of 48 scans per second. A 70 MHz high pass filter and an 800 MHz low pass filter were used during data acquisition with the 400 MHz antenna. GPR data were collected down to a maximum depth of approximately 5 feet, based on an estimated two-way travel time of 8 nanoseconds per foot. All of the GPR data were downloaded to a field computer and reviewed in the field and office using Radprint software.

Locations of the EM61 metal detection survey lines and the GPR survey lines acquired across the geophysical survey area are shown as red dots and purple lines, respectively in **Figure 2**. Each red dot represents an EM61 data point.

Contour plots of the EM61 bottom coil and differential results are presented in **Figures 3 and 4**, respectively. The bottom coil results represent the most sensitive component of the EM61 instrument and detect metal objects regardless of size. The bottom coil response can be used to delineate metal conduits or utility lines, small, isolated metal objects, and areas containing insignificant metal debris. The differential results are obtained from the difference between the top and bottom coils of the EM61 instrument. The differential results focus on the larger metal objects such as drum and UST-size objects and ignore the smaller insignificant metal objects.

Preliminary contour plots of the EM61 bottom coil and EM61 differential results obtained from the survey area were emailed to Ms. Overmyer on March 13, 2011.

### **3.0 DISCUSSION OF RESULTS**

The linear EM61 bottom coil anomaly running along the edge of West Market Street and intersecting grid coordinates X=160 Y=25 is probably in response to several buried utility lines. The short linear bottom coil anomalies intersecting grid coordinates X=144 Y=67 and X=278 Y=36 are probably in response to buried conduits or lines.

GPR data suggest the high amplitude EM anomalies (contours shaded in red) centered near grid coordinates X=140 Y=58 and X=225 Y=35 are in response to the hydraulic vehicle lift and a business sign, respectively. GPR data also suggest that the EM61 differential anomalies centered near grid coordinates X=135 Y=67 and 210 Y=67 are in response to the buildings, bollards and/or miscellaneous equipment.

The remaining EM61 anomalies are probably in response to known surface objects or to buried miscellaneous debris. The geophysical investigation suggests that the surveyed portion of Parcel 10 does not contain metallic USTs.

### **4.0 SUMMARY & CONCLUSIONS**

Our evaluation of the EM61 and GPR data collected across the proposed ROW area at the Hardin Oil Company, Inc. property (Parcel 10) located at 9422 West Market Street in Colfax, North Carolina, provides the following summary and conclusions:

- The EM61 and GPR surveys provided reliable results for the detection of metallic USTs within the surveyed portion of the site.
- The linear EM61 bottom coil anomaly running along the edge of West Market Street and intersecting grid coordinates X=160 Y=25 is probably in response to several buried utility lines.

- GPR data suggest the high amplitude EM anomalies (contours shaded in red) centered near grid coordinates X=140 Y=58 and X=225 Y=35 are in response to the hydraulic vehicle lift and a business sign, respectively.
- The geophysical investigation suggests that the surveyed portion of the site does not contain buried metallic USTs.

## **5.0 LIMITATIONS**

EM61 and GPR surveys have been performed and this report prepared for Solutions-IES in accordance with generally accepted guidelines for EM61 and GPR surveys. It is generally recognized that the results of the EM61 and GPR are non-unique and may not represent actual subsurface conditions. The EM61 and GPR results do not conclusively determine that the proposed ROW area of the site does not contain metallic USTs but that none were detected.

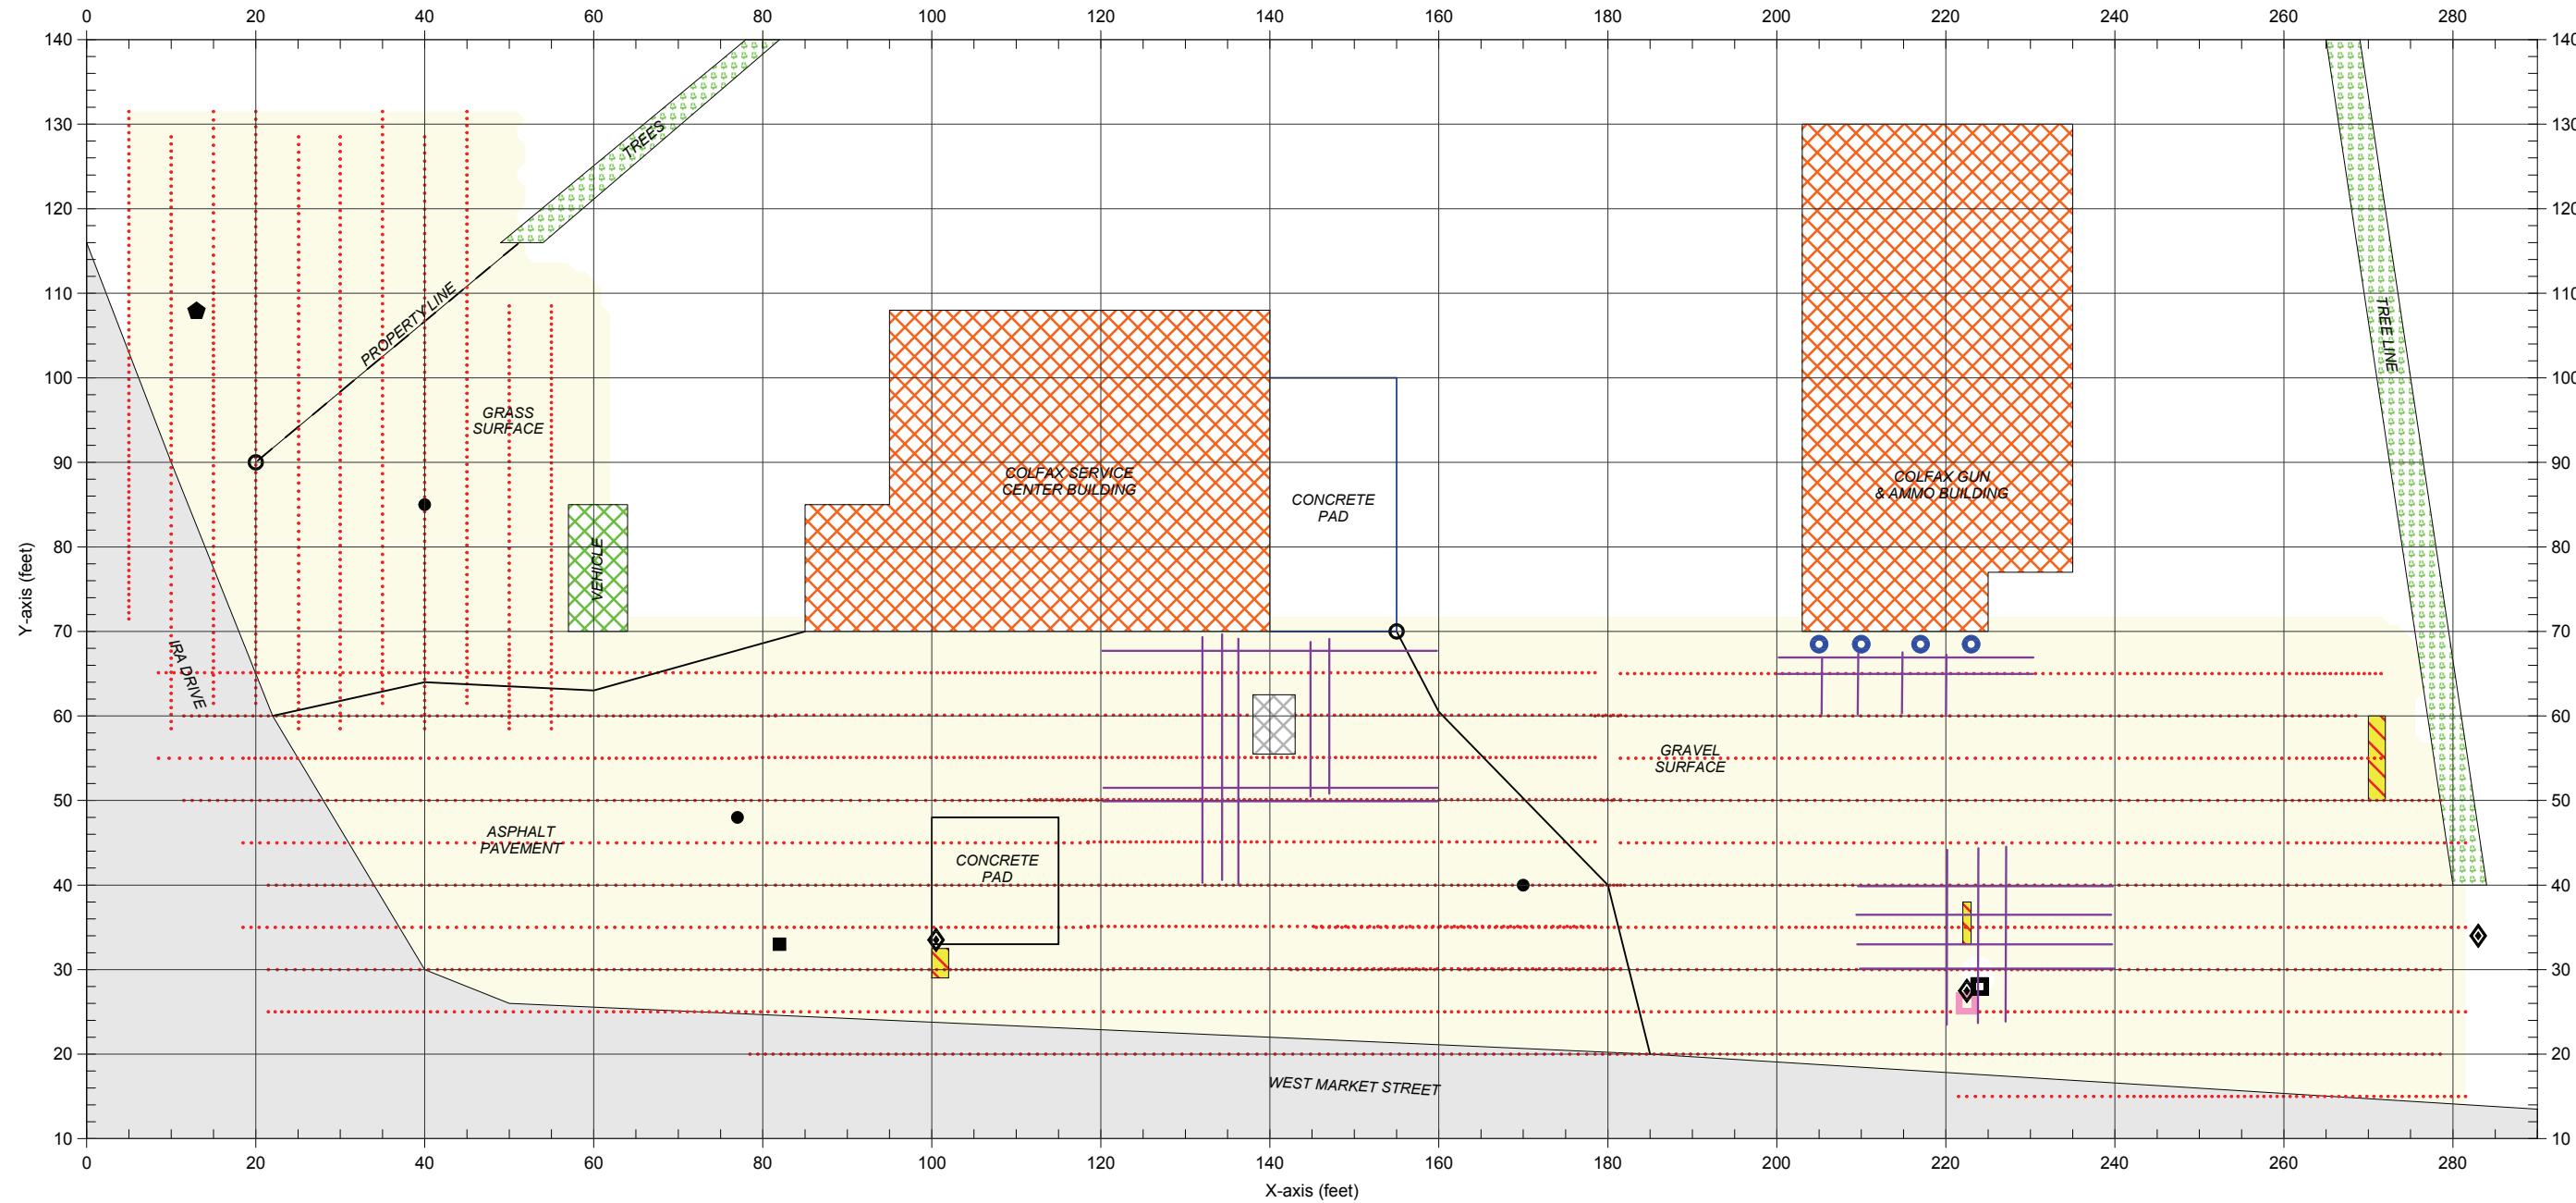

The photograph shows the Geonics EM61 metal detector that was used to conduct the metal detection survey across the proposed Right-of-Way area at Parcel 10 on March 3, 2011.

The photographs show the SIR-2000 GPR system equipped with a 400 MHz antenna that were used to conduct the ground penetrating radar investigation at Parcel 10 on March 8, 2011.

The photograph shows the proposed Right-of-Way area at the Hardin Oil Company, Inc. property located at 9422 West Market Street in Colfax, North Carolina. The photograph is viewed in a northeasterly direction.

**APPENDIX E**  
**LABORATORY ANALYTICAL REPORT**

## Laboratory Report of Analysis

To: Jody Overmyer  
SOLUTIONS-IES  
1101 Nowell Rd.  
Raleigh, NC 27607

Report Number: **31100609**

Client Project: **3948-Guilford Co. Parcel 10**

Dear Jody Overmyer,

Enclosed are the results of the analytical services performed under the referenced project for the received samples and associated QC as applicable. The samples are certified to meet the requirements of the National Environmental Laboratory Accreditation Conference Standards. Copies of this report and supporting data will be retained in our files for a period of five years in the event they are required for future reference. All results are intended to be used in their entirety and SGS is not responsible for use of less than the complete report. Any samples submitted to our laboratory will be retained for a maximum of thirty (30) days from the date of this report unless other arrangements are requested.

If there are any questions about the report or services performed during this project, please call Michael D. Page at (910) 350-1903. We will be happy to answer any questions or concerns which you may have.

Thank you for using SGS North America Inc. for your analytical services. We look forward to working with you again on any additional analytical needs.

Sincerely,  
SGS North America Inc.

---

## Laboratory Qualifiers

### Report Definitions

DL	Method, Instrument, or Estimated Detection Limit per Analytical Method
CL	Control Limits for the recovery result of a parameter
LOQ	Reporting Limit
DF	Dilution Factor
RPD	Relative Percent Difference
LCS(D)	Laboratory Control Spike (Duplicate)
MS(D)	Matrix Spike (Duplicate)
MB	Method Blank

### Qualifier Definitions

*	Recovery or RPD outside of control limits
B	Analyte was detected in the Lab Method Blank at a level above the LOQ
U	Undetected (Reported as ND or < LOD)
V	Recovery is below quality control limit. The data has been validated based on a favorable signal-to-noise and detection limit
A	Amount detected is less than the Lower Method Calibration Limit
J	Amount detected is between the Method Detection Limit and the Lower Calibration Limit
O	The recovery of this analyte in the OPR is above the Method QC Limits and the reported concentration in the sample may be biased high
E	Amount detected is greater than the Upper Calibration Limit
S	The amount of analyte present has saturated the detector. This situation results in an underestimation of the affected analyte(s)
Q	Indicates the presence of a quantitative interference. This situation may result in an underestimation of the affected analyte(s)
I	Indicates the presence of a qualitative interference that could cause a false positive or an overestimation of the affected analyte(s)
DPE	Indicates the presence of a peak in the polychlorinated diphenylether channel that could cause a false positive or an overestimation of the affected analyte(s)
TIC	Tentatively Identified Compound
EMC	Estimated Maximum possible Concentration due to ion ratio failure
ND	Not Detected
K	Result is estimated due to ion ratio failure in High Resolution PCB Analysis
P	RPD > 40% between results of dual columns
D	Spike or surrogate was diluted out in order to achieve a parameter result within instrument calibration range
M1	Mis-identified peak
M2	Software did not integrate peak
M3	Incorrect baseline construction (i.e. not all of peak included; two peaks integrated as one)
M4	Pattern integration required (i.e. DRO, GRO, PCB, Toxaphene and Technical Chlordane)
M5	Other - Explained in case narrative

Note      Results pages that include a value for "Solids (%)" have been adjusted for moisture content.

## Case Narrative

### 10-2-6-8

MADEP EPH - The sample was initially extracted within holding times, but with surrogate recoveries below the QC limits. The sample was reextracted out of hold, but has acceptable surrogate recoveries. Both sets of data are reported in this SDG.

Lab Sample ID: 31100609009-F  
Lab Project ID: 31100609

Collection Date: 03/28/2011 15:30  
Received Date: 03/30/2011 10:00  
Matrix: Soil  
Solids (%): 69

## Results by SW-846 8270D

Parameter	Result	Qual	LOQ/CL	Units	DF
Diethyl phthalate	ND		449	ug/Kg	1
Dimethyl phthalate	ND		449	ug/Kg	1
2,4-Dimethylphenol	ND		449	ug/Kg	1
Diphenylamine	ND		449	ug/Kg	1
Fluoranthene	ND		449	ug/Kg	1
Fluorene	ND		449	ug/Kg	1
Hexachlorobenzene	ND		449	ug/Kg	1
Hexachlorobutadiene	ND		449	ug/Kg	1
Hexachlorocyclopentadiene	ND		449	ug/Kg	1
Hexachloroethane	ND		449	ug/Kg	1
Indeno(1,2,3-cd)pyrene	ND		449	ug/Kg	1
Isophorone	ND		449	ug/Kg	1
Naphthalene	ND		449	ug/Kg	1
4-Nitroaniline	ND		449	ug/Kg	1
Nitrobenzene	ND		449	ug/Kg	1
4-Nitrophenol	ND		449	ug/Kg	1
Pentachlorophenol	ND		449	ug/Kg	1
Phenanthrene	ND		449	ug/Kg	1
Phenol	ND		449	ug/Kg	1
Pyrene	ND		449	ug/Kg	1
n-Nitrosodi-n-propylamine	ND		449	ug/Kg	1

## Surrogates

2,4,6-Tribromophenol	57.0	41.0-129	%	1
2-Fluorobiphenyl	76.0	48.0-123	%	1
2-Fluorophenol	89.0	42.0-123	%	1
Nitrobenzene-d5	86.0	46.0-117	%	1
Phenol-d6	86.0	48.0-125	%	1
Terphenyl-d14	75.0	44.0-140	%	1

## Batch Information

Analytical Batch: XMS1060  
Analytical Method: SW-846 8270D  
Instrument: MSD6  
Analyst: CMP  
Analytical Date/Time: 04/04/2011 21:40

Prep Batch: XXX1179  
Prep Method: SW-846 3541  
Prep Date/Time: 04/04/2011 11:50  
Prep Initial Wt./Vol.: 32.3 g  
Prep Extract Vol: 10 mL
