CAUTION NOTICE

THE SUBSURFACE INFORMATION AND THE SUBSURFACE INVESTIGATION ON WHICH IT IS BASED WERE MADE FOR THE PURPOSE OF STUDY, PLANNING, AND DESIGN, AND NOT FOR CONSTRUCTION OR PAY PURPOSES. THE VARIOUS FIELD BORING LOGS, ROCK CORES, AND SOIL TEST DATA AVAILABLE MAY BE REVIEWED OR INSPECTED IN RALEIGH BY CONTACTING THE N. C. DEPARTMENT OF TRANSPORTATION, GEOTECHNICAL ENGINEERING UNIT AT (919) 250-4088. NEITHER THE SUBSURFACE PLANS AND REPORTS, NOR THE FIELD BORING LOGS, ROCK CORES, OR SOIL TEST DATA ARE PART OF THE CONTRACT.

GENERAL SOIL AND ROCK STRATA DESCRIPTIONS AND INDICATED BOUNDARIES ARE BASED ON A GEOTECHNICAL INTERPRETATION OF ALL AVAILABLE SUBSURFACE DATA AND MAY NOT NECESSARILY REFLECT THE ACTUAL SUBSURFACE CONDITIONS BETWEEN BORINGS OR BETWEEN SAMPLED STRATA WITHIN THE BOREHOLE. THE LABORATORY SAMPLE DATA AND THE IN SITU (IN-PLACE) TEST DATA CAN BE RELIED ON ONLY TO THE DEGREE OF RELIABILITY INHERENT IN THE STANDARD TEST METHOD. THE OBSERVED WATER LEVELS OR SOIL MOISTURE CONDITIONS INDICATED IN THE SUBSURFACE INVESTIGATIONS ARE AS RECORDED AT THE TIME OF THE INVESTIGATION. THESE WATER LEVELS OR SOIL MOISTURE CONDITIONS MAY VARY CONSIDERABLY WITH TIME ACCORDING TO CLIMATIC CONDITIONS INCLUDING TEMPERATURES, PRECIPITATION, AND WIND, AS WELL AS OTHER NON-CLIMATIC FACTORS.

THE BIDDER OR CONTRACTOR IS CAUTIONED THAT DETAILS SHOWN ON THE SUBSURFACE PLANS ARE PRELIMINARY ONLY AND IN MANY CASES THE FINAL DESIGN DETAILS ARE DIFFERENT. FOR BIDDING AND CONSTRUCTION PURPOSES, REFER TO THE CONSTRUCTION PLANS AND DOCUMENTS FOR FINAL DESIGN INFORMATION ON THIS PROJECT. THE DEPARTMENT DOES NOT WARRANT OR GUARANTEE THE SUFFICIENCY OR ACCURACY OF THE INVESTIGATION MADE, NOR THE INTERPRETATIONS MADE, OR OPINION OF THE DEPARTMENT AS TO THE TYPE OF MATERIALS AND CONDITIONS TO BE ENCOUNTERED. THE BIDDER OR CONTRACTOR IS CAUTIONED TO MAKE SUCH INDEPENDENT SUBSURFACE INVESTIGATIONS AS HE DEEMS NECESSARY TO SATISFY HIMSELF AS TO CONDITIONS TO BE ENCOUNTERED ON THIS PROJECT. THE CONTRACTOR SHALL HAVE NO CLAIM FOR ADDITIONAL COMPENSATION OR FOR AN EXTENSION OF TIME FOR ANY REASON RESULTING FROM THE ACTUAL CONDITIONS ENCOUNTERED AT THE SITE DIFFERING FROM THOSE INDICATED IN THE SUBSURFACE INFORMATION.

SOIL AND ROCK LEGEND, TERMS, SYMBOLS, AND ABBREVIATIONS

SOIL DESCRIPTION

SOIL IS CONSIDERED TO BE THE UNCONSOLIDATED, SEMI-CONSOLIDATED, OR WEATHERED EARTH MATERIALS THAT CAN BE PENETRATED WITH A CONTINUOUS FLIGHT POWER AUGER, AND YIELD LESS THAN 100 BLOWS PER FOOT ACCORDING TO STANDARD PENETRATION TEST (AASHTO T206, ASTM D-1586). SOIL CLASSIFICATION IS BASED ON THE AASHTO SYSTEM. BASIC DESCRIPTIONS GENERALLY SHALL INCLUDE: CONSISTENCY, COLOR, TEXTURE, MOISTURE, AASHTO CLASSIFICATION, AND OTHER PERTINENT FACTORS SUCH AS MINERALOGICAL COMPOSITION, ANGULARITY, STRUCTURE, PLASTICITY, ETC. EXAMPLE:

VERY STIFF, GRAY, SILTY CLAY, MOIST WITH INTERBEDDED FINE SAND LAYERS, HIGHLY PLASTIC, A-7-6

SOIL LEGEND AND AASHTO CLASSIFICATION

GENERAL CLASS.	GRANULAR MATERIALS (≤ 35% PASSING #200)							SILT-CLAY MATERIALS (> 35% PASSING #200)				ORGANIC MATERIALS

	IN.	12	3				

SOIL MOISTURE - CORRELATION OF TERMS

SOIL MOISTURE SCALE (ATTERBERG LIMITS)	FIELD MOISTURE DESCRIPTION	GUIDE FOR FIELD MOISTURE DESCRIPTION
	- SATURATED - (SAT.)	USUALLY LIQUID; VERY WET, USUALLY FROM BELOW THE GROUND WATER TABLE
LL — LIQUID LIMIT		
PLASTIC RANGE (PI)	- WET - (W)	SEMISOLID; REQUIRES DRYING TO ATTAIN OPTIMUM MOISTURE
PL — PLASTIC LIMIT		
OM — OPTIMUM MOISTURE	- MOIST - (M)	SOLID; AT OR NEAR OPTIMUM MOISTURE
SL — SHRINKAGE LIMIT		
	- DRY - (D)	REQUIRES ADDITIONAL WATER TO ATTAIN OPTIMUM MOISTURE

PLASTICITY

	PLASTICITY INDEX (PI)	DRY STRENGTH
NONPLASTIC	0-5	VERY LOW
LOW PLASTICITY	6-15	SLIGHT
MED. PLASTICITY	16-25	MEDIUM
HIGH PLASTICITY	26 OR MORE	HIGH

COLOR

DESCRIPTIONS MAY INCLUDE COLOR OR COLOR COMBINATIONS (TAN, RED, YELLOW-BROWN, BLUE-GRAY). MODIFIERS SUCH AS LIGHT, DARK, STREAKED, ETC. ARE USED TO DESCRIBE APPEARANCE.

GRADATION

WELL GRADED - INDICATES A GOOD REPRESENTATION OF PARTICLE SIZES FROM FINE TO COARSE.
UNIFORM - INDICATES THAT SOIL PARTICLES ARE ALL APPROXIMATELY THE SAME SIZE. (ALSO POORLY GRADED)
GAP-GRADED - INDICATES A MIXTURE OF UNIFORM PARTICLES OF TWO OR MORE SIZES.

ANGULARITY OF GRAINS

THE ANGULARITY OR ROUNDNESS OF SOIL GRAINS IS DESIGNATED BY THE TERMS: ANGULAR, SUBANGULAR, SUBROUNDED, OR ROUNDED.

MINERALOGICAL COMPOSITION

MINERAL NAMES SUCH AS QUARTZ, FELDSPAR, MICA, TALC, KAOLIN, ETC. ARE USED IN DESCRIPTIONS WHENEVER THEY ARE CONSIDERED OF SIGNIFICANCE.

COMPRESSIBILITY

SLIGHTLY COMPRESSIBLE	LIQUID LIMIT LESS THAN 31
MODERATELY COMPRESSIBLE	LIQUID LIMIT EQUAL TO 31-50
HIGHLY COMPRESSIBLE	LIQUID LIMIT GREATER THAN 50

PERCENTAGE OF MATERIAL

ORGANIC MATERIAL	GRANULAR SOILS	SILT - CLAY SOILS	OTHER MATERIAL	
TRACE OF ORGANIC MATTER	2 - 3%	3 - 5%	TRACE	1 - 10%
LITTLE ORGANIC MATTER	3 - 5%	5 - 12%	LITTLE	10 - 20%
MODERATELY ORGANIC	5 - 10%	12 - 20%	SOME	20 - 35%
HIGHLY ORGANIC	>10%	>20%	HIGHLY	35% AND ABOVE

GROUND WATER

- WATER LEVEL IN BORE HOLE IMMEDIATELY AFTER DRILLING
- STATIC WATER LEVEL AFTER 24 HOURS
- PW — PERCHED WATER, SATURATED ZONE, OR WATER BEARING STRATA
- SPRING OR SEEP

ROCK DESCRIPTION

HARD ROCK IS NON-COASTAL PLAIN MATERIAL THAT IF TESTED, WOULD YIELD SPT REFUSAL. AN INFERRED ROCK LINE INDICATES THE LEVEL AT WHICH NON-COASTAL PLAIN MATERIAL WOULD YIELD SPT REFUSAL. SPT REFUSAL IS PENETRATION BY A SPLIT SPOON SAMPLER EQUAL TO OR LESS THAN 0.1 FOOT PER 60 BLOWS. IN NON-COASTAL PLAIN MATERIAL, THE TRANSITION BETWEEN SOIL AND ROCK IS OFTEN REPRESENTED BY A ZONE OF WEATHERED ROCK.
ROCK MATERIALS ARE TYPICALLY DIVIDED AS FOLLOWS:

WEATHERED ROCK (WR)	NON-COASTAL PLAIN MATERIAL THAT WOULD YIELD SPT N VALUES > 100 BLOWS PER FOOT IF TESTED.
CRYSTALLINE ROCK (CR)	FINE TO COARSE GRAIN IGNEOUS AND METAMORPHIC ROCK THAT WOULD YIELD SPT REFUSAL IF TESTED. ROCK TYPE INCLUDES GRANITE, GNEISS, GABBRO, SCHIST, ETC.
NON-CRYSTALLINE ROCK (NCR)	FINE TO COARSE GRAIN METAMORPHIC AND NON-COASTAL PLAIN SEDIMENTARY ROCK THAT WOULD YEILD SPT REFUSAL IF TESTED. ROCK TYPE INCLUDES PHYLLITE, SLATE, SANDSTONE, ETC.
COASTAL PLAIN SEDIMENTARY ROCK (CP)	COASTAL PLAIN SEDIMENTS CEMENTED INTO ROCK, BUT MAY NOT YIELD SPT REFUSAL. ROCK TYPE INCLUDES LIMESTONE, SANDSTONE, CEMENTED SHELL BEDS, ETC.

WEATHERING

FRESH	ROCK FRESH, CRYSTALS BRIGHT, FEW JOINTS MAY SHOW SLIGHT STAINING. ROCK RINGS UNDER HAMMER IF CRYSTALLINE.
VERY SLIGHT (V SLI.)	ROCK GENERALLY FRESH, JOINTS STAINED, SOME JOINTS MAY SHOW THIN CLAY COATINGS IF OPEN, CRYSTALS ON A BROKEN SPECIMEN FACE SHINE BRIGHTLY. ROCK RINGS UNDER HAMMER BLOWS IF OF A CRYSTALLINE NATURE.
SLIGHT (SLI.)	ROCK GENERALLY FRESH, JOINTS STAINED AND DISCOLORATION EXTENDS INTO ROCK UP TO 1 INCH. OPEN JOINTS MAY CONTAIN CLAY. IN GRANITOID ROCKS SOME OCCASIONAL FELDSPAR CRYSTALS ARE DULL AND DISCOLORED. CRYSTALLINE ROCKS RING UNDER HAMMER BLOWS.
MODERATE (MOD.)	SIGNIFICANT PORTIONS OF ROCK SHOW DISCOLORATION AND WEATHERING EFFECTS. IN GRANITOID ROCKS, MOST FELDSPARS ARE DULL AND DISCOLORED, SOME SHOW CLAY. ROCK HAS DULL SOUND UNDER HAMMER BLOWS AND SHOWS SIGNIFICANT LOSS OF STRENGTH AS COMPARED WITH FRESH ROCK.
MODERATELY SEVERE (MOD. SEV.)	ALL ROCK EXCEPT QUARTZ DISCOLORED OR STAINED. IN GRANITOID ROCKS, ALL FELDSPARS DULL AND DISCOLORED AND A MAJORITY SHOW KAOLINIZATION. ROCK SHOWS SEVERE LOSS OF STRENGTH AND CAN BE EXCAVATED WITH A GEOLOGIST'S PICK. ROCK GIVES "CLUNK" SOUND WHEN STRUCK. *IF TESTED, WOULD YIELD SPT REFUSAL*
SEVERE (SEV.)	ALL ROCK EXCEPT QUARTZ DISCOLORED OR STAINED. ROCK FABRIC CLEAR AND EVIDENT BUT REDUCED IN STRENGTH TO STRONG SOIL. IN GRANITOID ROCKS ALL FELDSPARS ARE KAOLINIZED TO SOME EXTENT. SOME FRAGMENTS OF STRONG ROCK USUALLY REMAIN. *IF TESTED, YIELDS SPT N VALUES > 100 BPF*
VERY SEVERE (V SEV.)	ALL ROCK EXCEPT QUARTZ DISCOLORED OR STAINED. ROCK FABRIC ELEMENTS ARE DISCERNIBLE BUT THE MASS IS EFFECTIVELY REDUCED TO SOIL STATUS, WITH ONLY FRAGMENTS OF STRONG ROCK REMAINING. SAPROLITE IS AN EXAMPLE OF ROCK WEATHERED TO A DEGREE SUCH THAT ONLY MINOR VESTIGES OF THE ORIGINAL ROCK FABRIC REMAIN. *IF TESTED, YIELDS SPT N VALUES < 100 BPF*
COMPLETE	ROCK REDUCED TO SOIL. ROCK FABRIC NOT DISCERNIBLE, OR DISCERNIBLE ONLY IN SMALL AND SCATTERED CONCENTRATIONS. QUARTZ MAY BE PRESENT AS DIKES OR STRINGERS. SAPROLITE IS ALSO AN EXAMPLE.

ROCK HARDNESS

VERY HARD	CANNOT BE SCRATCHED BY KNIFE OR SHARP PICK. BREAKING OF HAND SPECIMENS REQUIRES SEVERAL HARD BLOWS OF THE GEOLOGIST'S PICK.
HARD	CAN BE SCRATCHED BY KNIFE OR PICK ONLY WITH DIFFICULTY. HARD HAMMER BLOWS REQUIRED TO DETACH HAND SPECIMEN.
MODERATELY HARD	CAN BE SCRATCHED BY KNIFE OR PICK. GOUGES OR GROOVES TO 0.25 INCHES DEEP CAN BE EXCAVATED BY HARD BLOW OF A GEOLOGIST'S PICK. HAND SPECIMENS CAN BE DETACHED BY MODERATE BLOWS.
MEDIUM HARD	CAN BE GROOVED OR GOUGED 0.05 INCHES DEEP BY FIRM PRESSURE OF KNIFE OR PICK POINT. CAN BE EXCAVATED IN SMALL CHIPS TO PEICES 1 INCH MAXIMUM SIZE BY HARD BLOWS OF THE POINT OF A GEOLOGIST'S PICK.
SOFT	CAN BE GROVED OR GOUGED READILY BY KNIFE OR PICK. CAN BE EXCAVATED IN FRAGMENTS FROM CHIPS TO SEVERAL INCHES IN SIZE BY MODERATE BLOWS OF A PICK POINT. SMALL, THIN PIECES CAN BE BROKEN BY FINGER PRESSURE.
VERY SOFT	CAN BE CARVED WITH KNIFE. CAN BE EXCAVATED READILY WITH POINT OF PICK. PIECES 1 INCH OR MORE IN THICKNESS CAN BE BROKEN BY FINGER PRESSURE. CAN BE SCRATCHED READILY BY FINGERNAIL.

FRACTURE SPACING

TERM	SPACING
VERY WIDE	MORE THAN 10 FEET
WIDE	3 TO 10 FEET
MODERATELY CLOSE	1 TO 3 FEET
CLOSE	0.16 TO 1 FEET
VERY CLOSE	LESS THAN 0.16 FEET

BEDDING

TERM	THICKNESS
VERY THICKLY BEDDED	> 4 FEET
THICKLY BEDDED	1.5 - 4 FEET
THINLY BEDDED	0.16 - 1.5 FEET
VERY THINLY BEDDED	0.03 - 0.16 FEET
THICKLY LAMINATED	0.008 - 0.03 FEET
THINLY LAMINATED	< 0.008 FEET

INDURATION

FOR SEDIMENTARY ROCKS, INDURATION IS THE HARDENING OF THE MATERIAL BY CEMENTING, HEAT, PRESSURE, ETC.

FRIABLE	RUBBING WITH FINGER FREES NUMEROUS GRAINS; GENTLE BLOW BY HAMMER DISINTEGRATES SAMPLE.
MODERATELY INDURATED	GRAINS CAN BE SEPARATED FROM SAMPLE WITH STEEL PROBE; BREAKS EASILY WHEN HIT WITH HAMMER.
INDURATED	GRAINS ARE DIFFICULT TO SEPARATE WITH STEEL PROBE; DIFFICULT TO BREAK WITH HAMMER.
EXTREMELY INDURATED	SHARP HAMMER BLOWS REQUIRED TO BREAK SAMPLE; SAMPLE BREAKS ACROSS GRAINS.

TERMS AND DEFINITIONS

ALLUVIUM (ALLUV.) - SOILS THAT HAVE BEEN TRANSPORTED BY WATER.

AQUIFER - A WATER BEARING FORMATION OR STRATA.

ARENACEOUS - APPLIED TO ROCKS THAT HAVE BEEN DERIVED FROM SAND OR THAT CONTAIN SAND.

ARGILLACEOUS - APPLIED TO ALL ROCKS OR SUBSTANCES COMPOSED OF CLAY MINERALS, OR HAVING A NOTABLE PROPORTION OF CLAY IN THEIR COMPOSITION, AS SHALE, SLATE, ETC.

ARTESIAN - GROUND WATER THAT IS UNDER SUFFICIENT PRESSURE TO RISE ABOVE THE LEVEL AT WHICH IT IS ENCOUNTERED, BUT WHICH DOES NOT NECESSARILY RISE TO OR ABOVE THE GROUND SURFACE.

CALCAREOUS (CALC.) - SOILS THAT CONTAIN APPRECIABLE AMOUNTS OF CALCIUM CARBONATE.

COLLUVIUM - ROCK FRAGMENTS MIXED WITH SOIL DEPOSITED BY GRAVITY ON SLOPE OR AT BOTTOM OF SLOPE.

CORE RECOVERY (REC.) - TOTAL LENGTH OF ALL MATERIAL RECOVERED IN THE CORE BARREL DIVIDED BY TOTAL LENGTH OF CORE RUN AND EXPRESSED AS A PERCENTAGE.

DIKE - A TABULAR BODY OF IGNEOUS ROCK THAT CUTS ACROSS THE STRUCTURE OF ADJACENT ROCKS OR CUTS MASSIVE ROCK.

DIP - THE ANGLE AT WHICH A STRATUM OR ANY PLANAR FEATURE IS INCLINED FROM THE HORIZONTAL.

DIP DIRECTION (DIP AZIMUTH) - THE DIRECTION OR BEARING OF THE HORIZONTAL TRACE OF THE LINE OF DIP, MEASURED CLOCKWISE FROM NORTH.

FAULT - A FRACTURE OR FRACTURE ZONE ALONG WHICH THERE HAS BEEN DISPLACEMENT OF THE SIDES RELATIVE TO ONE ANOTHER PARALLEL TO THE FRACTURE.

FISSILE - A PROPERTY OF SPLITTING ALONG CLOSELY SPACED PARALLEL PLANES.

FLOAT - ROCK FRAGMENTS ON SURFACE NEAR THEIR ORIGINAL POSITION AND DISLODGED FROM PARENT MATERIAL.

FLOOD PLAIN (FP) - LAND BORDERING A STREAM, BUILT OF SEDIMENTS DEPOSITED BY THE STREAM.

FORMATION (FM.) - A MAPPABLE GEOLOGIC UNIT THAT CAN BE RECOGNIZED AND TRACED IN THE FIELD.

JOINT - FRACTURE IN ROCK ALONG WHICH NO APPRECIABLE MOVEMENT HAS OCCURRED.

LEDGE - A SHELF-LIKE RIDGE OR PROJECTION OF ROCK WHOSE THICKNESS IS SMALL COMPARED TO ITS LATERAL EXTENT.

LENS - A BODY OF SOIL OR ROCK THAT THINS OUT IN ONE OR MORE DIRECTIONS.

MOTTLED (MOT.) - IRREGULARLY MARKED WITH SPOTS OF DIFFERENT COLORS. MOTTLING IN SOILS USUALLY INDICATES POOR AERATION AND LACK OF GOOD DRAINAGE.

PERCHED WATER - WATER MAINTAINED ABOVE THE NORMAL GROUND WATER LEVEL BY THE PRESENCE OF AN INTERVENING IMPERVIOUS STRATUM.

RESIDUAL (RES.) SOIL - SOIL FORMED IN PLACE BY THE WEATHERING OF ROCK.

ROCK QUALITY DESIGNATION (RQD) - A MEASURE OF ROCK QUALITY DESCRIBED BY TOTAL LENGTH OF ROCK SEGMENTS EQUAL TO OR GREATER THAN 4 INCHES DIVIDED BY THE TOTAL LENGTH OF CORE RUN AND EXPRESSED AS A PERCENTAGE.

SAPROLITE (SAP.) - RESIDUAL SOIL THAT RETAINS THE RELIC STRUCTURE OR FABRIC OF THE PARENT ROCK.

SILL - AN INTRUSIVE BODY OF IGNEOUS ROCK OF APPROXIMATELY UNIFORM THICKNESS AND RELATIVELY THIN COMPARED WITH ITS LATERAL EXTENT, THAT HAS BEEN EMPLACED PARALLEL TO THE BEDDING OR SCHISTOSITY OF THE INTRUDED ROCKS.

SLICKENSIDE - POLISHED AND STRIATED SURFACE THAT RESULTS FROM FRICTION ALONG A FAULT OR SLIP PLANE.

STANDARD PENETRATION TEST (PENETRATION RESISTANCE) (SPT) - NUMBER OF BLOWS (N OR BPF) OF A 140 LB. HAMMER FALLING 30 INCHES REQUIRED TO PRODUCE A PENETRATION OF 1 FOOT INTO SOIL WITH A 2 INCH OUTSIDE DIAMETER SPLIT SPOON SAMPLER. SPT REFUSAL IS PENETRATION EQUAL TO OR LESS THAN 0.1 FOOT PER 60 BLOWS.

STRATA CORE RECOVERY (SREC.) - TOTAL LENGTH OF STRATA MATERIAL RECOVERED DIVIDED BY TOTAL LENGTH OF STRATUM AND EXPRESSED AS A PERCENTAGE.

STRATA ROCK QUALITY DESIGNATION (SRQD) - A MEASURE OF ROCK QUALITY DESCRIBED BY TOTAL LENGTH OF ROCK SEGMENTS WITHIN A STRATUM EQUAL TO OR GREATER THAN 4 INCHES DIVIDED BY THE TOTAL LENGTH OF STRATA AND EXPRESSED AS A PERCENTAGE.

TOPSOIL (TS.) - SURFACE SOILS USUALLY CONTAINING ORGANIC MATTER.

STATE PROJECT: 34749.1.1 (U-0209B)
FEDERAL PROJECT: MAFR-FR-18-2(17)
COUNTY: Mecklenburg
DESCRIPTION: US 74 (INDEPENDENCE BLVD.) FROM NC 24 / 27 TO IDLEWILD ROAD

SUBJECT: Geotechnical Report – Inventory

PROJECT DESCRIPTION

The U-209B U.S. 74 project roadway improvements will bring three travel lanes each way with a fourth turn lane at the curb, for access to bordering properties. Two lanes in the median area will connect with the established bus lanes. An area about 75' x 1000' will be established in the median below the Sharon Amity overpass. The project covers about 4.7 miles of roadway including all alignments. The high traffic Sharon Amity, Idlewild Road, and Conference Drive at-grade crossings will each be replaced with bridges over U.S. 74.

This report describes a project that will include 1.89 miles of road widening, two bridges, with ramp and loop access, to U.S. 74, and one bridge without direct access. The existing U.S. 74 was built nearly at grade, and except at the three overpasses, the widening will require roadway embankments or cuts of less than 5'.

The field investigation was conducted from June 21 2008 to July 10 2008, using a CME-550 drill machine with an automatic hammer. Standard Penetration Tests, (SPT), were performed through hollow stem augers at selected locations. Representative soil samples were collected and forwarded to the Materials and Tests Unit laboratory for soil quality analysis, moisture content and ASTM classification. The investigations for the bridges were contracted out and are not included in this report. All available drill-holes are plotted on the plan view and also appear projected into the profiles.

The following alignments, totaling 4.71 miles, were investigated.

	Line	Station			Length

					Total feet 24,911
					(4.71 miles)

ITEMS OF SPECIAL GEOTECHNICAL INTEREST

Highly plastic clayey residual soil: Only 4 of 131 samples returned a PI value greater than 35. Fifty three of 131 samples, returned PI values from 25 to 35 and would not be suitable for the upper 2 feet of an embankment. In general, PI decreases with depth from the original surface.

Groundwater: No consistent water table was found, but at the 24 hour reading, standing water was found at 10 boring locations in the median, between –L- 47+00CL, and –L- 121+00,Cl, within 8' of the surface.

All-weather spring fed seeps or streams: At the time of the investigation, the locations listed in the table below, had water at the surface. There is a 30" culvert near the seep, and the possibility that the seep is the consequence of a failed drainage pipe. This area is near the apex of a drainage divide, so it is unlikely that the flow into the drop is ordinary ground water.

Line	Station			Offset	comment
-Y20-	10+00	to	10+00	35 left	Open drop, from 30" culvert: 100 gpm
-Y20-	10+00	to	11+50	25 rt	Persistent seep

Planned embankment over artificial fill.
Most of the outside one or two lanes of –Llt- will fall on artificial embankment fill of unknown quality and origin.

Artificial fill settlement
The commercial property on the left side of the alignment at the beginning of the project, was built up at the back with 15' to 20' of artificial fill. A small block building at –L- 34+00, 300' left, (outside of the construction limits), is perched at the top of the fill slope. The north wall of this structure exhibits a crack typical of uneven settlement. This is a pre existing condition, and is not a consequence of future construction.

Wet soil.
Drainage of Independence Boulevard is from the right side parking lots to RCP to drops in the right gutter, then underground to drops in the center island, then underground to the left side, then RCP to off of the project on the left. Either from failures in this drainage system or from natural groundwater, water was noted within 5' of the surface in 24 hour water readings throughout the project. Areas of wet soil below the existing pavement should be expected.

PHYSIOGRAPHY AND GEOLOGY

Physiography
The project is in the Piedmont Physiographic Province, between the Coastal Plain and the Blue Ridge Provinces. The Piedmont has the form of a smooth plane, inclined from the Blue Ridge Front to the Fall Line, that has been dissected by stream valleys that may have 100' of elevation difference in a half mile. Relief within this U-0209B project is from a high of 760' elevation near the beginning of the project to 735' at the end. Where Independence Boulevard crosses McAlpine Creek, about 7,000' beyond the project, the elevation drops to 660'. The low point in southern Mecklenburg County is about elevation 520'.

Geology
Throughout North Carolina the geologic provinces run northeast – southwest and are divided on the basis of metamorphic grade or dominant rock type. This project is entirely within the Charlotte Belt, an agglomeration of igneous rock which extends from the South Carolina border to near Statesville. Specifically, it is in a unit mapped as Czv: Volcanic rock, Cambrian age, (500 to 570 mya)

This highway project runs generally northwest so it traverses the geology at almost right angles to the regional trend. This may be reflected in the northeast southwest trend of the major Mecklenburg county streams, and the intervening divides.

Soil Properties
The soil types found in the investigation of this project are residual, embankment fill, or alluvial soil.

Residual soil is a product of in-place chemical weathering of the original rock. Chemical weathering usually reduces rock strength making it more susceptible to erosion, transport and removal by natural physical processes. The borings for the Albemarle Road Bridge at the beginning of the project, elevation 760' found over 50' of soil. The borings at the end of the project, elevation 737', found rock within 5 feet of the surface.

Alluvial Soil: Occurrences of alluvial soil were recorded and are plotted on the profiles. I have no explanation for this unless they are remnant terrace deposits. Samples from the alluvial sections do not differ much from the residual or embankment soil in composition or hardness.

Fill, Roadway Embankment, Artificial Fill Soil: Construction may require fill or excavation of soil to bring the natural ground surface to the desired elevation. When soil is transported to a new site and compacted it is fill soil. If it is handled under the standards of the NCDOT, it becomes Roadway Embankment. If some other entity is responsible for the fill placement, it is Artificial Fill. On this project, the fill soil properties are similar to those of the residual soil, except according to the tests, the fill properties are more uniform and "better" than that of the residual soil.

Rock Properties
In the last 1000' of –L-, rock was identified less than 10' below grade, though not in outcrop. This rock will not be involved in the cut sections and no water was measured in the borings that ended on rock.

Groundwater Properties
As mentioned above, water was found within 5' of the surface in many of the borings at the 24 hour reading. Because the entire project is on a drainage divide, normally it would be presumed to be an area of hydrologic recharge, rather than discharge. The project area has at least 50% impermeable surface and runoff from most of it is directed into storm drains.

GEOTECHNICAL DESCRIPTIVE ANALYSIS

The project is broken into segments that are discussed in the following sections, so that it may be more easily discussed.

Segment 1: The –L- alignment from –L- 28+26.23, including sections split into –Llft_ and –Lrt-, to the end of the project at –L- 128+57.

Segment 2: Sharon Amity interchange including ramps, loops and access roads.

Segment 3: Idlewild Road and Conference Drive interchanges including ramps, loops access roads.

Segment 1: The –L- alignment from –L- 28+26.23, including sections split into –Llft_ and –Lrt -, to the end of the project at –L- 128+57.

Physical Description

This segment includes the area covered by existing Independence Boulevard, and the extended project limits left and right.

-L-

This segment is mapped in plan on sheets 4 through 16 and 16A, and profile sheets 26 through 30. No cross sections were printed for this report. The –L- alignment begins at station 28+26.33, elevation 771, climbs to elevation 774 at station 35+51, and then descends to elevation 754 at station –L-56+39. From there, the road climbs back to elevation 764 at station 75+25, then drops to 734.8' elevation at station 109+55. The final climb is to elevation 742 at station 124 + 50, and the project ends at station 127+ 15 and elevation 740.56.

Center Bus Lanes

The barriers isolating the center lanes begin at –L- 28+80, separated by 27', two travel lanes. The median area expands to 34' at –L-35+00, then 48' at -L-38+00, finally at –L-41+00 the median area is 62' wide, and the active bus lanes are shifted against the center concrete barrier. There is a reference on the plans to "Cats Station Area" at –L- 43+50, and a center barrier appears, and then at 45+00 the outer barriers disappear, allowing access between the center lanes and the regular Independence Boulevard travel lanes. At – L-49+00 a merge lane enters the median from –Llt, and a lane departs the median from –lrt-. At 51+00 concrete barriers isolating one bus lane each way begin. The center barrier is dropped at –L- 50+00. The two isolated median bus lanes continue to –L-86+00.

From –L-86+00, the median tapers out as above, until it is 65' wide at –L-98+00, only the travel lanes are against the outside barriers. From –L-102+00, the median area narrows until at –L-108+00 it is 47' wide, an interior barrier appears, and the two outside barriers end. There is a painted merge taper up to –L- 115+00. No mention of a "Cats Station Area" is made on the plans, though an area for future development is established.

Regular Travel Lanes

As mentioned above, there will be 3 regular travel lanes each direction and a curb lane that will provide access to the existing properties along Independence Boulevard. The outside lane pinches out at 120+00 on the right and tapers in at 125+00 on the right. The only discontinuities in the curb lane occur in the interval between the exit loops and the on ramps at the two major interchanges: -Lrt-36+00 to 39+00, -Llt- 46+00 to 49+00, -Llft 87+00 to 90+00, -Lrt-90+00 to 93+00.

Geology

With the exception on a narrow planting strip adjacent to the bordering sidewalks, this segment is nearly all covered by pavement. From the borings, we have determined the area is underlain by residual soil, showing evidence of thinning toward the end of the project.

Cuts and Fills

The existing ground line at –L-CL follows the median, which is up to 2' lower than the paved lanes. The planned road has no median; so apparently, the new paved surface will be at an elevation similar to the existing pavement. The segment will push out at least one lane width on each side. The majority of the right side will involve some cut, and the majority of the left side will involve some fill. The existing roadway will probably be undercut throughout.

Soil

From the geotechnical borings completed in the grassed median, this segment is mostly underlain by soil classified as AASHTO A-7, lesser amounts of A-6, and 15 of 131 samples A-4 and A-5. The field classification of the soil included residual, roadway embankment, and alluvium. The soil identified as roadway embankment was less likely to have the highest PI values which are typical of red cap clays. The residual soil had the greatest variation in PI values, reflecting the greatest range depth of origin, (surface to 20' below surface). The alluvium most resembled the residual soil.

Rock

Rock is estimated to be at 50' depth at the beginning of the project, and as indicated by auger refusal, is at less than 10' at the end of the project. It will not be a factor in this segment.

Groundwater

At the 24 hour reading, standing water was found at 10 boring locations in the median, between –L-47+00CL, and –L- 121+00,Cl, within 8' of the surface. Most of the residual soil is rich in clay and should have very poor permeability. The only place an aquifer might exist is in the rock borings between 122+00 and the end of the project at –L- 128+00. None of the borings in this area were wet.

Geologic Hazards

Wet Soil: The AASHTO soil types found in this area, (A-6 and A-7 clayey soil), have the characteristic that once wet, they do not dry easily. Clay soil can have a high maximum density, but the optimum water content usually falls in a narrow range.

Artificial Fill: By inspection, some areas of the left side of the road widening will land on artificial fill at the fringes of the commercial property there. The quality and compaction of this fill will have to be verified before acceptance into the sub grade of the finished road.

Segment 2. Sharon Amity interchange including ramps, loops and access roads.

Physical Description
This segment of the job is new construction, mostly on new location. Plan sheets 6, 7, 8, 17, 18, 19, 20, and profile sheets 31 through 35 cover the segment. Alignments include Y1LPA-, -Y1RMPA –, Y1RMPAA-, -Y1LPC-, -Y1RMPC-, -Y1RMPCC-, -Y1-, -Y5-, -Y6-, -Y7-, -Y8-, -Y10A-, and -Y10-.

Sharon Amity, (-Y1-) will cross over Independence Blvd, (-L-) on a bridge, approximately 150' up line from the present location, (-L- 40+00 to 41+50). Y1RPC- and –Y1LPC- will provide access to the right side of –L- from the right side of -Y1-. Y1RMPC becomes 2 lanes and changes into Y1RMPCC before intersecting –Y1-. Alignment –Y10A- is opposite Y1RMPCC, across -Y1-and provides access to the area currently served by Charleston Drive.

Y1LPC- and –Y1RMPC- will provide access to the left side of –L- from the left side of -Y1-. Alignment -Y1LPA- merges with –L- at about –L-45+00. This loop encloses an area that is approximately 380' x 420'. At –L- 49+00, Ramp -Y1RMPA-departs –L- then bifurcates, and becomes Y1RMPAA- before intersecting –Y- left side. The leg opposite -Y1RMPAA- , (across -Y1-), is Y5-, (Holbrook Ave). Part of the present Sharon Amity Holbrook Ave intersection is preserved as a two lane –Y2- on both sides of Holbrook. Alignment –Y2- runs parallel to –Y1- towards –L-, then crosses under the bridge and stops at the area enclosed by –Y1LPA-.

Geology
This segment is on residual soil 50' thick or thicker, that is currently completely covered with urban development.

Cuts and Fills
The significant fills on this segment are the bridge approach ramps with up to 25' of fill. No cut of any consequence is planned.

Soil
The soil is red, A-7 or A-6 residual, alluvial, or fill soil, most likely all derived from the residual soil. The existing Holbrook Avenue – Sharon Amity intersection is at the head of a topographic low 600' across with 40' relief draining to the northwest. This area was probably filled during the Sharon Amity construction, but it will not be disturbed by this project.

Groundwater
Standing water was not measured in any of the borings on this segment.

Wet weather and persistent streams
The topographic feature mentioned in "Soil", just above, drains the area northeast of Independence Boulevard, and northwest of Sharon Amity.

Segment 3: Idlewild Road and Conference Drive interchanges including ramps, loops access roads.

Physical Description
This segment of the job includes new construction, mostly on existing alignment, (Y-15 bridge approaches), and construction on new location. Plan sheets 12, 13, 14, 21, 22, 23, 24, 25, and profile sheets 35 through 39 cover the segment. Alignments include -Y15-, -Y15LPB-, -Y15RMPB-, -Y15LPD-, -Y15RMPD-, -Y18-, -Y19-, and –Y20-.

Idlewild road, (-Y15-), will cross over Independence Blvd, (-L-) on a bridge at the present location, (-L- 90+00). Alignments –Y15LPD- and Y15RPD provide access to the right side of –L- from the right side of –Y15-, (at –Y15- 27+00), 400' back from the bridge.

Y15RPB- and –Y15LPB- will provide access to the left side of –L- from the left side of -Y15- intersecting –Y15- at 42+47, 800' back from the bridge. Alignment –Y18-, (new alignment Conference Drive) is opposite Y15RMPB / Y15LPB, across -Y15-.

Conference Drive, (Y-18) which now dead ends into Independence Blvd at -L-102+00, will cross on a bridge at –L-103+00 then continue 1000' to intersect with Idlewild Road, (-Y-15-), ultimately giving Conference Drive protected access to –Llft-, and -Lrt-. In the opposite direction Conference Drive rejoins the original alignment at -Y18- 27+50.

Soil
The soil is red, A-7 or A-6 residual, alluvial, or fill soil, most likely all derived from the residual soil. Excessive settlement is not anticipated.

Groundwater
Standing water was not measured in any of the borings on this segment.

Respectfully Submitted
