Re: Preliminary Site Assessment Report
Deborah Brown Property (Parcel 32)
Waynesville, Haywood County, NC
State Project U-4412
WBS Element # 35022.1.1
H&H Job No. ROW-305

Dear Ethan:

1.0 Introduction

Hart & Hickman, PC (H&H) has prepared this letter report documenting Preliminary Site Assessment (PSA) activities recently conducted at the Deborah Brown property (Parcel 32) located at 838 Howell Mill Road in Waynesville, Haywood County, North Carolina. A site location map is included as Figure 1 and a site map is included as Figure 2. PSA activities were conducted on behalf of the North Carolina Department of Transportation (NC DOT) in accordance with discussions between NC DOT and H&H. A brief background for this project is discussed below.

The purpose of this assessment was to determine the presence or absence of impacted soil on the subject property in the proposed drainage easement construction area related to road improvement activities along Howell Mill Road (State Project U-4412). Parcel 32 is currently a residential property and is located adjacent to Schulhofer, Inc., Parcel 31. The Parcel 31 site currently operates as a junk yard and recycling center and historically operated as an auto salvage yard and for waste incineration. PSA activities were recently conducted on Parcel 31 to determine the potential for wastes and impacted soils due to historical site operations. Impacted soil and soil mixed with surface waste were previously identified during PSA activities within the proposed right-of-way and construction easement areas south of Howell Mill Road on Parcel 31. Soil/surface waste in portions

of the right-of-way and construction easement areas on Parcel 31 are impacted with lead, polychlorinated biphenyls (PCBs), and other constituents. Due to the close proximity of the junk yard to Parcel 32, PSA activities were recently conducted to determine the potential for soil impacts in proposed NC DOT work areas on Parcel 32. The NC DOT preliminary plan of the Howell Mill Road improvement activities near the Parcel 32 property is attached as Appendix A. Parcel 32 PSA activities are discussed below.

2.0 Site Assessment

H&H mobilized to the subject property on February 23 and 25, 2011 to collect soil samples in the proposed drainage easement area located on the western portion of Parcel 32. Prior to conducting soil borings, underground utilities were marked by NC One Call and a private utility locator. Soil borings (32-1 through 32-9) were advanced using a stainless steel hand auger and/or direct push technology (DPT). Because the proposed cut in the drainage easement area is approximately 5 ft below ground surface (bgs), borings were advanced to a total depth of 8 ft bgs on approximate 50 ft spacing. No samples were collected by H&H outside of proposed NC DOT work areas. Soil boring locations are shown on Figure 2.

Two samples were collected from each boring location: one surface sample (0 - 1 ft) and one sample beneath the surface with the highest potential for impacts based on field screening. To facilitate the selection of soil samples for laboratory analysis, soil from each boring was screened continuously for the presence of volatile organic compounds (VOCs) with an organic vapor analyzer (OVA). Additionally, H&H observed the soil for visual and olfactory indications of impacts. Based on OVA readings, there were moderate indications of impacts in soil boring 32-8. There were no significant indications of impacts in the remaining soil borings. Soil boring logs are included in Appendix B.

Soil samples were collected using a nitrile glove-covered hand and placed into laboratory-supplied sample containers and then labeled as to content, analyses requested, sample date and time, and sampler's name. The samples were placed in an iced cooler upon collection and were

submitted to Prism Laboratories, Inc. in Asheville, North Carolina (NC) under standard chain-of-custody protocol.

Because surface waste was not encountered on Parcel 32, no Toxicity Characteristic Leaching Procedure (TCLP) analyses were required for surface soil samples. Each soil sample was analyzed for volatile organic compounds (VOCs) using EPA Method 8260B, semi-VOCs using EPA Method 8270D, RCRA Metals by EPA Method 7471B and 6010C, and PCBs by EPA Method 8082A. Based on the results of field screening, two soil samples collected from boring 32-8 were analyzed for total petroleum hydrocarbons (TPH) gasoline-range organics (GRO) and diesel-range organics (DRO) using EPA Method 8015C and oil & grease (O&G) using EPA Method 9071B. Soil sample analytical results are summarized in Table 1. Laboratory analytical data sheets and chain-of-custody documentation are included in Appendix C. The analytical results are discussed below.

After sampling, each soil boring was backfilled with apparently clean soil removed from that boring and capped with bentonite. Soil borings were located using a GPS unit with sub-meter accuracy.

3.0 Analytical Results

3.1 Surface Soil

Target analytes were detected in one surface soil sample above potential screening levels. Concentrations of TPH-GRO (86 mg/kg) and O&G (300 mg/kg) were detected in surface soil sample 32-8 (0 to 1 ft) above the North Carolina Department of Environment and Natural Resources (DENR) Action Levels of 10 mg/kg and 250 mg/kg, respectively. Low level concentrations of 4-isopropyltoluene (0.021 mg/kg), toluene (0.033 mg/kg), bis(2-Ethylhexyl)phthalate (0.64 mg/kg), and TPH-DRO (17 mg/kg) were also detected in 32-8 (0 - 1 ft) below target screening levels. Concentrations of acetone (ranging from 0.075 mg/kg to 0.15 mg/kg) were detected surface soil samples (32-1 through 32-9) below target screening levels. Acetone and bis(2-Ethylhexyl)phthalate may be laboratory introduced. Low level concentrations of metals including arsenic (ranging from

4.2 mg/kg to 8.0 mg/kg), barium (ranging from 78 mg/kg to 280 mg/kg), chromium (ranging from 39 mg/kg to 98 mg/kg), lead (ranging from 8.4 mg/kg to 36 mg/kg), selenium (ranging from 2.5 mg/kg to 3.9 mg/kg), and mercury (ranging from 0.043 mg/kg to 0.12 mg/kg) were also detected in surface soil samples (32-1 through 32-9) below reported background levels for NC soils and/or eastern USA soils (see Table 1). No other target compounds were detected in surface soil samples collected at the site.

3.2 Underlying Soil

Low level concentrations of O&G (140 mg/kg), 4-isopropyltoluene (0.0072 mg/kg), acetone (0.12 mg/kg), and toluene (0.016 mg/kg) were detected in 32-8 (1 - 2 ft) below target screening levels. A low level concentration of selenium (4.3 mg/kg) was reported in soil sample 32-7 (4 - 5 ft) slightly above reported background levels. Although the selenium concentration slightly exceeded the background range in one sample, the data appear to indicate that the selenium detections are naturally occurring. With the exception of the selenium detection in 32-7 (4 - 5 ft) and no detection of mercury in 32-2 (4 - 5 ft), low level concentrations of metals including arsenic (ranging from 3.3 mg/kg to 7.2 mg/kg), barium (ranging from 53 mg/kg to 450 mg/kg), chromium (ranging from 42 mg/kg to 190 mg/kg), lead (ranging from 3.5 mg/kg to 27 mg/kg), selenium (ranging from 2.7 mg/kg to 3.8 mg/kg) and mercury (ranging from 0.03 mg/kg to 0.19 mg/kg) were detected in underlying soil samples (32-1 through 32-9) below reported background levels for NC soils and/or eastern USA soils (see Table 1). No other target compounds were detected in underlying soil samples collected at the site.

3.3 Impacted Soil Volume

Based on analytical results and OVA readings, there are a maximum of 225 cubic yards (340 tons) of TPH GRO and O&G impacted soil between the surface and 3 ft near the southern end of the proposed drainage easement in the southwestern portion of Parcel 32. The actual impacted soil area is likely smaller. Although the low level TPH DRO, VOCs, and bis(2-Ethylhexyl)phthalate detected in 32-8 (0 - 1 ft) and the low level VOCs and O&G detected in 32-8 (1 - 2 ft) are below potential screening levels and/or DENR Action Levels, DENR requires soil with detectable impacts be

managed as impacted, if excavated. It is assumed that impacts are not present below 3 ft near boring 32-8 based on OVA readings. The approximate extent of TPH and O&G impacted soil is shown on Figure 3.

4.0 Summary and Regulatory Considerations

H&H has completed PSA activities on the Parcel 32 property. The Parcel 32 property is located adjacent to the Schulhofer's, Inc. property (Parcel 31) which is currently used as a junk yard and recycling center. Soil and surface waste impacted with lead, PCBs, and other constituents were previously identified in portions of the right-of-way and construction easement areas on Parcel 31. Due to the close proximity of the junk yard to Parcel 32 and the potential for impacts to soil, H&H collected a total of 18 soil samples from proposed NC DOT work areas on the Parcel 32 property.

Analytical results indicate TPH GRO and O&G at concentrations above the DENR Action Levels in one boring location. H&H estimates there are a maximum of 225 cubic yards (340 tons) of TPH GRO and O&G impacted soil between the surface and 3 ft in the southwestern portion of the Parcel 32 property near sample 32-8. Soil in this area is also impacted with low level TPH DRO, VOCs, and bis(2-Ethylhexyl)phthalate below potential screening levels. According to NC DOT a proposed cut is planned in this area. Impacted soil that is disturbed and/or removed from this area should be properly managed and disposed at a permitted facility.

Should you have any questions or need any additional information, please feel free to contact us.

Sincerely,

Hart & Hickman, PC

David Graham

SC Certification No. 99012
NC Drinking Water Cert No. 37735

Case Narrative

03/07/2011

Hart & Hickman (Charlotte)
David Graham
2923 South Tryon St. Ste 100
Charlotte, NC 28203

Project: Schulhofer Inc. Parcel 32
Project No.: WBS# 35022.1.1
Lab Submittal Date: 02/28/2011
Prism Work Order: 1020708

This data package contains the analytical results for the project identified above and includes a Case Narrative, Sample Results and Chain of Custody. Unless otherwise noted, all samples were received in acceptable condition and processed according to the referenced methods.

Data qualifiers are flagged individually on each sample. A key reference for the data qualifiers appears at the end of this case narrative.

Please call if you have any questions relating to this analytical report.

Respectfully,

PRISM LABORATORIES, INC.

VP Laboratory Services

Reviewed By

Data Qualifiers Key Reference:

L1	LCS recovery outside of the QC limits. LCSD recovery within the limits. No further action taken.
LH	High LCS recovery. Analyte not detected in the sample(s). No further action taken.
MC	Sample concentration too high for recovery evaluation.
MI	Matrix spike outside of the control limits. Matrix interference suspected.
SR	Surrogate recovery outside the QC limits.
BRL	Below Reporting Limit
MDL	Method Detection Limit
RPD	Relative Percent Difference
*	Results reported to the reporting limit. All other results are reported to the MDL with values between MDL and reporting limit indicated with a J.
