PRELIMINARY SITE ASSESSMENT REPORT

**3117 Old Cullowhee Road (SR 1002)
Consolidated Property Services, Inc., Parcel 008
Cullowhee, North Carolina
State Project B-4159, WBS Element #33507.1.1
Jackson County**

Executive Summary

The subject site is the Consolidated Property Services, Inc. property (Parcel 008) located at 3117 Old Cullowhee Road (SR 1002) in Cullowhee, North Carolina. The primary purpose of this investigation was to evaluate the presence or absence of underground storage tanks (USTs) and constituents of concern in soil within the accessible portions of Parcel 008 and the existing North Carolina Department of Transportation (NCDOT) Rights-of-Way (ROWS) adjacent to Parcel 008, as a result of previous and/or current operations at the subject site.

Parcel 008 contains a vacant 2-story building located at the intersection of Old Cullowhee Road and Edgewater Road. The building had reportedly been previously used for apartments and commercial activities, as well as a service station that included minor auto repair activities. There is currently no visible evidence of existing USTs or vents at the site, and representatives of the North Carolina Department of Environment and Natural Resources (NCDENR) Asheville District office indicated that there are no files for the site in its database, including UST closure records. However, the owner of the adjacent parcel (Parcel 012) indicated that USTs had been removed from the front portion of Parcel 008 several years ago. No NCDENR UST Incident number or Facility ID number has been assigned to the property.

GEL Engineering of NC, Inc. (GEL) performed a preliminary site assessment within the accessible portions of Parcel 008 and adjacent NCDOT ROWs that included a geophysical investigation, and the collection and analysis of soil samples. The results of the geophysical investigation indicated the location of a “Probable UST” near the southeastern portion of the onsite building, where the presence of a subsurface metallic object was subsequently confirmed by direct push technology (DPT) probing. No other

Executive Summary (continued)

subsurface anomalies indicative of suspected or known USTs were identified within the investigation area.

Soil samples were collected for analysis from five borings constructed within the investigation area, and analyzed for petroleum hydrocarbon constituents, volatile organic compounds (VOCs), and semi-volatile organic compounds (SVOCs). Neither gasoline range organics (GRO) nor SVOCs were detected in any sample and one VOC, acetone, was detected at significantly low levels in two soil samples. Diesel range organics (DRO) was detected at levels exceeding the NCDENR DRO Action Level in soil samples collected from borings S8-3 and S8-5.

Based on the detection of elevated DRO concentrations in the two soil samples, it is estimated that there is an approximate total volume of 127 cubic yards of impacted soil (DRO >10 milligrams per kilogram (mg/kg)) in the vicinity of boring S8-3 and 151 cubic yards of impacted soil in the vicinity of boring S8-5.

No additional environmental investigation of the soil at the site by NCDOT is recommended at this time. However, it is recommended that soils excavated in the vicinity of borings S8-3 and S8-5 as part of planned construction activities by NCDOT be handled appropriately and further characterized for petroleum constituents, as needed, especially if the activities include the removal of the “Probable UST” identified adjacent to boring S8-5.

1.0 Introduction

This document presents the details of a geophysical survey and preliminary site assessment performed at the Consolidated Property Services, Inc. property (Parcel 008) located at 3117 Old Cullowhee Road (SR 1002) in Cullowhee, North Carolina. The investigation was performed within the accessible portions of Parcel 008, and included the existing North Carolina Department of Transportation (NCDOT) rights-of-way (ROWs) for Old Cullowhee Road and Edgewater Road.

Parcel 008 contains a 2-story building located at the intersection of Old Cullowhee Road and Edgewater Road, as shown in Photograph 1 in Appendix I. It is currently being renovated, and has reportedly been previously used for apartments and commercial activities, as well as a service station. The site location is shown on Figure 1, an excerpt from the United States Geological Survey (USGS) 7.5-minute quadrangle map of Sylva South, North Carolina. The preliminary site assessment was conducted by GEL Engineering of NC, Inc. (GEL) in accordance with the Notice to Proceed issued by NCDOT on December 16, 2013.

The primary purpose of this investigation was to evaluate the presence or absence of underground storage tanks (USTs) and/or constituents of concern in soil within accessible portions of the property and adjacent NCDOT ROWs as a result of current and/or former operations.

2.0 Background

NCDOT is planning road improvements to the area in the vicinity of Old Cullowhee Road and the Tuckasegee River in Cullowhee, North Carolina. NCDOT wanted to assess the area in the property within Parcel 008, to evaluate the presence or absence of USTs and soil contamination related to the current and/or former on-site operations, and the impact (if any) of these operations on the proposed road improvements. Figures 2 through 4 show the general site layout for Parcel 008.

GEL Engineering of NC, Inc.
an Affiliate of The GEL Group, Inc.

fc: ncdt01413

The building located on the property is currently vacant and is being renovated. According to the adjacent landowner (Parcel 012), the site was previously used as a service station and minor auto repairs were reportedly conducted on the first floor of the southeastern portion (back) of the building (see Photograph 4 in Appendix I). That portion of the building, as well as the second floor above it, are currently used as unoccupied apartments, and were not accessible for inspection at the time of GEL's investigation. The adjacent landowner also indicated that USTs associated with the former service station activities were removed several years ago from an area between Old Cullowhee Road and the western corner of the onsite building. Representatives of the NCDENR Asheville District office indicated that there are no files for the site in its database, including UST closure records. No NCDENR UST Incident number or Facility ID number has been assigned to the property.

3.0 Local Geology and Surroundings

Parcel 008 is located in a developed area of Cullowhee in Jackson County, North Carolina. Surrounding land uses include residential and commercial activities.

This area is located in the Blue Ridge Belt within the Blue Ridge Physiographic of North Carolina. The land surface of the area is characterized by mountainous terrain. The Blue Ridge Belt is typified by a complex of sedimentary, metamorphic, and igneous rocks, including felsic gneiss and granite that are Late Proterozoic in age. The Cullowhee area is located adjacent to and within the Tuckasegee River floodplain.

The United States Department of Agriculture's *Web Soil Survey* (2014) (<http://websoilsurvey.nrcs.usda.gov/app/WebSoilSurvey.aspx>) maps the native soil in the investigation area as "Braddock-Urban Land Complex" (BrC), which is characterized as stream terraces consisting of clay and clay loam derived from old alluvium. The soils encountered at the site during the preliminary site assessment consisted predominantly of red/brown sandy clay.

Groundwater was not encountered in borings constructed as part of the preliminary site assessment. Previous depth to groundwater measurements made in monitoring wells located in the Cullowhee area indicate the water table in the area of the site is typically located at depths of at least 20 feet below ground surface (bgs). Based on the USGS

topographic map presented as Figure 1, the site is located approximately 2100 feet above mean sea level. The topography in Figure 1 indicates that groundwater in the vicinity of Parcel 008 most likely flows in a southerly direction towards the Tuckasegee River. Parcel 008 is located less than 100 feet south of the Tuckasegee River, and storm water from the site, as well as adjacent sites north of Parcel 008, flows in a southerly direction to the river.

4.0 Subsurface Investigation

To evaluate the presence or absence of USTs and/or impact to subsurface soil within the accessible portions of Parcel 008 and adjacent NCDOT ROWs, GEL performed a limited site assessment within the accessible portions of the highlighted area shown in Figure 2 that consisted of the following tasks:

- Performance of a geophysical investigation to identify the presence or absence of USTs and associated appurtenances within the accessible portions of Parcel 008 and the ROWs.
- Soil vapor screening of soil samples collected from subsurface soil borings located within the accessible portions of Parcel 008 and the ROWs to evaluate the potential presence or absence of soil impact from petroleum constituents of concern.
- Collection and laboratory analysis of soil samples from the subsurface borings.

The details of these tasks are discussed in the following sections.

4.1 Geophysical Survey

The geophysical survey included the deployment of ground penetrating radar (GPR) technology and time domain electromagnetic technology (TDEM) to the site. These technologies were used in concert with one another in order to identify subsurface metallic anomalies and, more specifically, to identify the potential presence of USTs within the investigation area. A brief description of each technology is presented in the following paragraphs followed by a discussion of the results of the geophysical investigation.

4.1.1 Ground Penetrating Radar Methodology

A RAMAC digital radar control system configured with a 250 Megahertz (MHz) antenna array was used in this investigation. GPR is an electromagnetic geophysical method that detects interfaces between subsurface materials with differing dielectric constants. The GPR system consists of an antenna that houses the transmitter and receiver, a digital control unit that both generates and digitally records the GPR data, and a color video monitor to view data as they are collected in the field.

The transmitter radiates repetitive short-duration electromagnetic waves (at radar frequencies) into the earth from an antenna moving across the ground surface. These radar waves are reflected back to the receiver from the interface of materials with different dielectric constants. The intensity of the reflected signal is a function of the contrast in the dielectric constant between the materials, the conductivity of the material through which the wave is traveling, and the frequency of the signal. Subsurface features that commonly cause such reflections are: 1) natural geologic conditions, such as changes in sediment composition, bedding, and cementation horizons and voids; or 2) unnatural changes to the subsurface, such as disturbed soils, soil backfill, buried debris, tanks, pipelines, and utilities. The digital control unit processes the signal from the receiver and produces a continuous cross-section of the subsurface interface reflection events.

GPR data profiles are collected along transects, which are measured paths along which the GPR antenna is moved. During a survey, marks are placed in the data by the operator at designated points along the GPR transects or with a survey wheel odometer. These marks allow for a correlation between the GPR data and the position of the GPR antenna on the ground.

Depth of investigation of the GPR signal is highly site-specific and is limited by signal attenuation (absorption) in the subsurface materials. Signal attenuation is dependent on the electrical conductivity of the subsurface materials. Signal attenuation is greatest in materials with relatively high electrical conductivities, such as clays, brackish groundwater, or groundwater with a high dissolved solid content from natural or man-made sources. Signal attenuation is lowest in relatively low-conductivity materials, such as dry sand or rock. Depth of investigation is also dependent on the antenna's transmitting frequency. Depth of investigation generally increases as transmitting

frequency decreases; however, the ability to resolve smaller subsurface features is diminished as frequency is decreased.

The GPR antenna used at this site is internally shielded from aboveground interference sources. Accordingly, the GPR response is not affected by overhead power lines, metallic buildings, or nearby objects.

4.1.2 Time Domain Electromagnetic Methodology

The TDEM methods measure the electrical conductivity of subsurface materials. The conductivity is determined by inducing (from a transmitter) a time or frequency-varying magnetic field and measuring (with a receiver) the amplitude and phase shift of an induced secondary magnetic field. The secondary magnetic field is created by subsurface conductive materials behaving as an inductor as the primary magnetic field is passed through them.

The Geonics EM-61 system used in this investigation operates within these principles. However, the EM-61 TDEM system can discriminate between moderately conductive earth materials and very conductive metallic targets. The EM-61 consists of a portable coincident loop time domain transmitter and receiver with a 0.5-meter by 1.0-meter coil system. The EM-61 generates 150 pulses per second and measures the response from the ground after transmission or between pulses. The secondary EM responses from metallic targets are of longer duration than those created by conductive earth materials. By recording the later time EM arrivals, only the response from metallic targets is measured, rather than the field generated by the earth material.

4.1.3 Field Procedures

The GPR and TDEM field investigation was performed on December 18, 2013, within the accessible portions of Parcel 008 and the adjacent NCDOT ROWs, as shown in Figure 3. A GPR system time range setting of 90 nanoseconds (ns) was used during the entire investigation. This range was determined after a series of test lines were conducted to evaluate the GPR response in the local geologic section. Interpretation of the GPR data was conducted in the field and any potential anomalies were marked in the field. GPR data processing typically included band pass filtering, background removal, horizontal smoothing, and gain adjustments. TDEM was also used to scan the project site. Any

electromagnetic anomalies indicative of buried metallic objects were marked in the field.

It should be noted that NC 811 underground utility locations had been performed within the investigation area at Parcel 008 prior to the initiation of the preliminary site assessment field activities at the site and were marked with paint.

No “Known USTs” were identified at Parcel 008 or within the adjacent NCDOT ROWs during the investigation. The GPR data collected at the site identified an underground anomaly on the northwestern side of the onsite building, near Old Cullowhee Road, that was initially classified as a “Possible UST” (area in foreground in Photograph 3 of Appendix I outlined with pink paint). TDEM data collected in the same area indicated a minor response in the subsurface in the marked area. Subsequent probing with direct push technology (DPT) equipment confirmed the presence of a 24-inch diameter reinforced concrete pipe (RCP) within the marked area at a depth of approximately 2 feet below ground surface (bgs). Therefore, it was concluded that the identified anomaly does not represent a “Possible UST” or a “Probable UST.”

The TDEM and GPR data identified a “Probable UST” near the southeastern corner of the onsite building, as Shown on Figures 3 and 4, and in Photograph 5 in Appendix I. The presence of a “Probable UST” was confirmed through DPT probing, which encountered a metallic object in the subsurface at a depth of approximately 2 feet bgs within the area outlined in red paint shown in Photograph 5 of Appendix I. The size of the tank is estimated to be 3 feet in diameter and 4 feet long. Since the southeastern portion of the onsite building was reportedly used for auto repair activities, the “Probable UST” may have been used as a waste oil tank. There was no visual evidence of any other USTs in the investigation area.

4.2 Subsurface Soil Investigation

To evaluate the presence or absence of impact to subsurface soil by constituents of concern, GEL collected soil samples from five subsurface soil borings, S8-1 through S8-5, at Parcel 008 on December 18, 2013, for analysis of total petroleum hydrocarbon indicator parameters. The soil borings were constructed within Parcel 008 and the NCDOT ROWs for Old Cullowhee Road and Edgewater Road, as shown on Figure 4 and in Photograph 2 in Appendix I. Soil boring S8-1 was constructed adjacent to and

downgradient from the area initially classified as a "Possible UST," as discussed in Section 4.1.3 above, and boring S8-5 was constructed adjacent to and downgradient from "Probable UST" identified near the southeastern portion of the onsite building. The northing and easting coordinates for the boring locations are listed in the table below.

**Summary of Location Data and PID Measurements
for Soil Samples Collected for Analysis at Parcel 008**

Soil Boring	Depth Interval of Soil Sample Collected for Analysis (feet bgs)	PID Reading (ppm)	Northing	Easting
S8-1	7-8	0.0	596280.359	754138.090
S8-2	7-8	0.0	596242.598	754151.052
S8-3	7-8	0.0	596198.678	754157.439
S8-4	7-8	0.0	596179.022	754172.075
S8-5	7-8	0.0	596201.666	754197.087

Notes:

- 1) Northings and Eastings are based on the NC State Plane Coordinate System
- 2) bgs = below ground surface
- 3) PID = photoionization detector
- 4) ppm = parts per million

All borings were advanced to a total depth of 8 feet bgs. Soil samples were collected at depths of 3-4 feet and 7-8 feet from each borehole. All soil samples were inspected for indications of impact by constituents of concern, including petroleum hydrocarbons, such as odors, discoloration, or visible sheen. This sampling was accomplished using DPT provided by Regional Probing Services. Soil boring lithologic logs are attached as Appendix II of this document. Groundwater was not encountered in any borings.

The soil samples were screened for the presence of organic vapors using a portable photoionization detector (PID). The PID measures the concentration of organic compounds in the vapor space above a soil sample resulting from volatilization of organic compounds contained in the soil. To screen the soils, each sample was placed in a clean, resealable polyethylene bag. The bag was sealed, and the sample was allowed to equilibrate for approximately 5 minutes, after which time a small opening was made in the bag. The probe of the PID was then inserted into the bag, and the airspace above the soil was screened for organic vapors.

No organic vapor concentrations were measured in any of the soil screening samples collected from the five borings. Therefore, to assess the subsurface soil quality, soil samples collected at a depth of 7-8 feet bgs from borings S8-1 through S8-5 were designated for analysis. One-half of each designated soil sample was submitted to each of two separate laboratories for analysis.

Following completion of the soil sampling activities, all borings were abandoned by filling the boreholes with soil cuttings and hydrated bentonite. Splits for each soil sample were submitted to QROS' analytical laboratory affiliate (KB Labs, Inc.) in Gainesville, Florida for analysis of petroleum hydrocarbon constituents using Ultra-violet Fluorescence Spectrometry. Since auto repair activities were reportedly conducted at the site, splits of the soil samples were submitted to Pace Analytical Services, Inc. (Pace) in Huntersville, North Carolina for analysis of volatile organic compounds (VOCs) using EPA Method 8260B and semi-volatile organic compounds (SVOCs) using EPA Method 8270D. The analytical results are included on the Certificates of Analysis provided in Appendix III, and a summary of the analytical results is presented in Table 1.

The QROS results indicate GRO was not detected in any of the soil samples, but DRO was detected in all five of the samples, and the detected levels in soil samples S8-3 and S8-5 exceeded the NCDENR action level for DRO (10 milligrams per kilogram (mg/kg)). Acetone was the only VOC detected by Pace in the collected soil samples. It was detected in S8-3 and S8-5 at levels of 0.218 mg/kg and 0.228 mg/kg, respectively, which are significantly below the NCDENT Maximum Soil Contaminant Concentration (MSCC) of 24 mg/kg for acetone. NO SVOCs were detected by Pace in any of the soil samples.

It is estimated that there is an approximate total volume of 127 cubic yards and 151 cubic yards of impacted soil (DRO >10 mg/kg) in the vicinity of borings S8-3 and S8-5, respectively, based on the following assumed areas within the investigation area (as shown on Figure 4) and assumed depths of impacted soil:

Boring S8-3 Area

- 430 square feet x 8 feet = 127 cubic yards

Boring S8-5 Area

- 510 square feet x 8 feet = 151 cubic yards

Assuming that the “Probable UST” identified during the geophysical investigation contained petroleum, there is a possibility that there may be additional volume of impacted soil in the vicinity the “Probable UST” if there was a prior release from the UST.

5.0 Conclusions and Recommendations

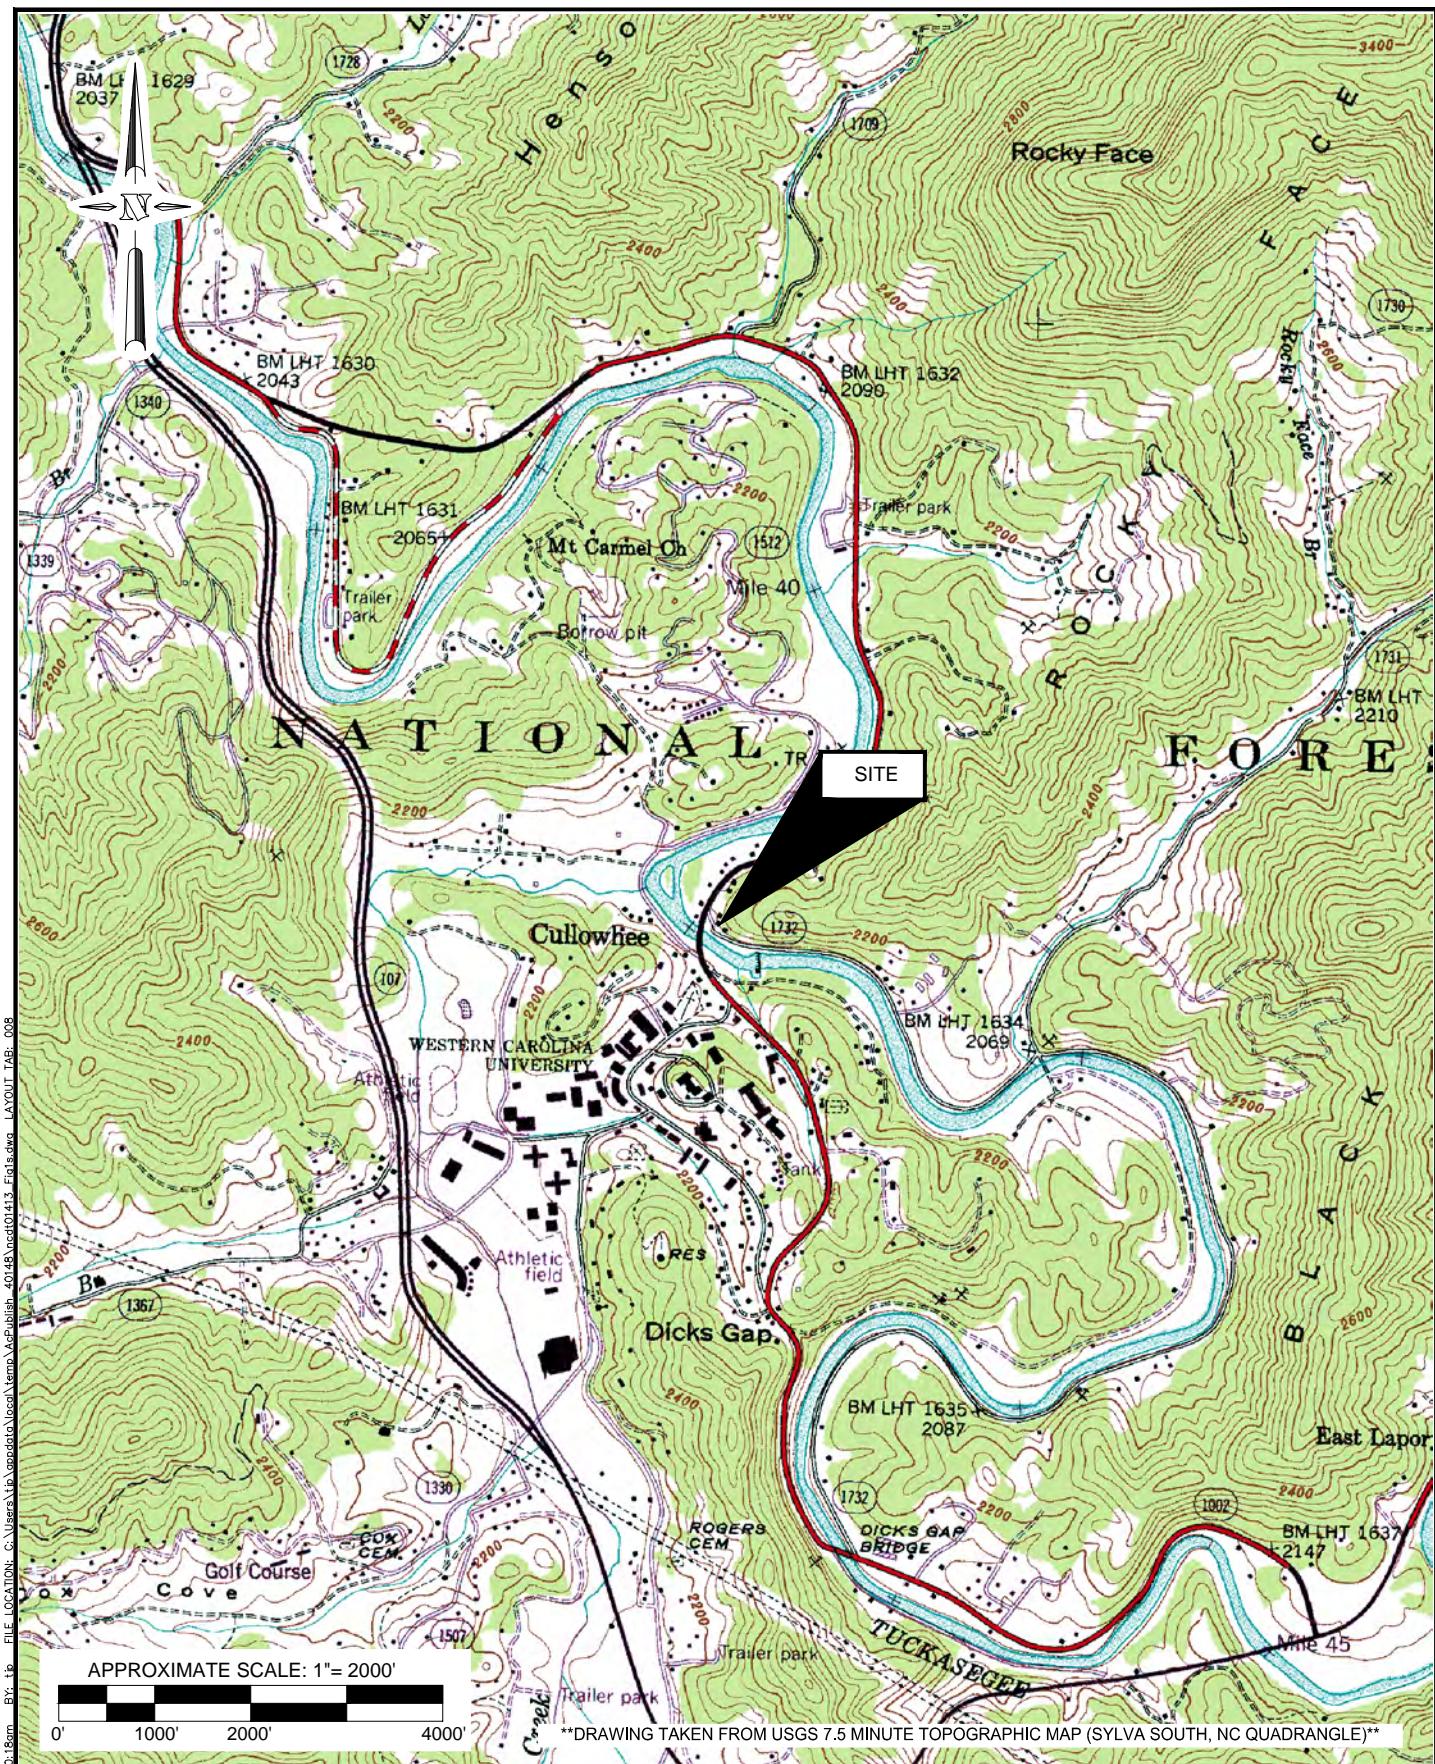

GEL performed a preliminary site assessment within the accessible portions of Parcel 008 and adjacent NCDOT ROWs that included a geophysical investigation, and the collection and analysis of soil samples. The results of the geophysical investigation indicated the location of a “Probable UST” near the southeastern portion of the onsite building, where the presence of a subsurface metallic object was subsequently confirmed by direct push technology (DPT) probing. No other subsurface anomalies indicative of suspected or known USTs were identified within the investigation area.

Soil samples were collected for analysis from five borings constructed within the investigation area and analyzed for petroleum hydrocarbon constituents, VOCs, and SVOCs. Neither GRO nor SVOCs were detected in any of the collected soil samples and one VOC, acetone, was detected at significantly low levels in two soil samples. DRO was detected at levels exceeding the NCDENR DRO Action Level in soil samples collected from borings S8-3 and S8-5.

Based on the detection of elevated DRO concentrations in the two soil samples, it is estimated that there is an approximate total volume of 127 cubic yards of impacted soil (DRO >10 mg/kg) in the vicinity of boring S8-3 and 151 cubic yards of impacted soil in the vicinity of boring S8-5.

No additional environmental investigation of the soil at the site by NCDOT is recommended at this time. However, it is recommended that soils excavated in the vicinity of borings S8-3 and S8-5 as part of planned construction activities by NCDOT be handled appropriately and further characterized for petroleum constituents, as needed, especially if the activities include the removal of the “Probable UST” identified adjacent to boring S8-5.

TABLE 1
SUMMARY OF ANALYTICAL RESULTS FOR COLLECTED SOIL SAMPLES

Preliminary Site Assessment
Parcel 008, 3117 Old Cullowhee Road
Cullowhee, Jackson County, North Carolina
State Project No. B-4159, WBS Element #33507.1.1

Sample ID	QROS Analytical Results							Pace SVOC Analytical Results	Pace Detected VOCs
	Diesel Range Organics (DRO)	Gasoline Range Organics (GRO)	BTEX (C6-C9)	TPH (C5-C35)	Total Aromatics (C10-C35)	16 EPA PAHs	Benzo(a)pyrene		
S-8-1	3.2	<1.3	<1.3	3.2	2.93	< 0.13	<0.065	ND	<0.0874
S-8-2	1.9	<0.5	<0.5	1.9	1.43	< 0.05	<0.025	ND	<0.0973
S-8-3	60.9	<1.3	<1.3	60.9	40.72	0.77	<0.065	ND	0.218
S-8-4*	3.5	<0.7	<0.7	3.5	2.26	0.15	<0.033	ND	<0.103
S-8-5	75.3	<1.3	<1.3	75.3	42.25	0.69	<0.065	ND	0.228
<i>NCDENR Action Level</i>	10	10							
<i>NCDENR MSCC</i>							0.088	0.35	24

- 1) All reported values are shown in milligrams per kilogram (mg/kg).
- 2) MSCC = NCDENR's Maximum Soil Contaminant Concentration Levels (April 2012); MSCC shown is the lowest of established Residential Soil Cleanup Levels and Soil-to-Groundwater Maximum Contaminant Concentration shown in the NCDENR MSCC Table for any given constituent.
- 3) NA = Not analyzed.
- 4) ND = No SVOCs detected above the laboratory Practical Quantitation Limit.
- 5) Reported values exceeding corresponding NCDENR Action Levels or MSCCs are highlighted in yellow.
- 6) * = Replicate analyses were performed by QROS at two or more dilution factors. Concentrations reported on this table are the higher of the replicate analyses, and non-detect results are listed on this table with the lower of the replicate reporting limits.

RE: Project: NCDT01413 WBS33507.1.1
Pace Project No.: 92184006

Dear Andrew Eyer:

Enclosed are the analytical results for sample(s) received by the laboratory on December 19, 2013. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Analyses were performed at the Pace Analytical Services location indicated on the sample analyte page for analysis unless otherwise footnoted.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Angela Baioni

angela.baioni@pacelabs.com

ANALYTICAL RESULTS

Project: NCDT01413 WBS33507.1.1

Pace Project No.: 92184006

Sample: S-8-1 Lab ID: **92184006022** Collected: 12/17/13 16:35 Received: 12/19/13 11:15 Matrix: Solid

Results reported on a "dry-weight" basis

QUALIFIERS

Project: NCDT01413 WBS33507.1.1

Pace Project No.: 92184006

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PRL - Pace Reporting Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Acid preservation may not be appropriate for 2-Chloroethylvinyl ether, Styrene, and Vinyl chloride.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-C Pace Analytical Services - Charlotte

ANALYTE QUALIFIERS

- 1g The internal standard response is below criteria. No hits associated with this internal standard. Results unaffected by high bias.
- 2g This flag applies to all compounds with RPD greater than 30%.
- A+ The reaction of the soil preservative, sodium bisulfate, is known to react with humic acid in soils to produce ketones. Based upon method blank results, the laboratory feels the ketones in this sample are a result of that reaction.
- IO The internal standard response was outside the laboratory acceptance limits confirmed by reanalysis. The results reported are from the most QC compliant analysis.
- L2 Analyte recovery in the laboratory control sample (LCS) was below QC limits. Results for this analyte in associated samples may be biased low.
- M0 Matrix spike recovery and/or matrix spike duplicate recovery was outside laboratory control limits.
- M1 Matrix spike recovery exceeded QC limits. Batch accepted based on laboratory control sample (LCS) recovery.
- R1 RPD value was outside control limits.
- S0 Surrogate recovery outside laboratory control limits.
- S2 Surrogate recovery outside laboratory control limits due to matrix interferences (confirmed by similar results from sample re-analysis).

January 07, 2014

Andrew Eyer
GEL Engineering of NC
PO Box 14262
Research Triangle, NC 27709

RE: Project: B-4159 WBS33507.1.1
Pace Project No.: 92184127

Dear Andrew Eyer:

Enclosed are the analytical results for sample(s) received by the laboratory on December 19, 2013. The results relate only to the samples included in this report. Results reported herein conform to the most current TNI standards and the laboratory's Quality Assurance Manual, where applicable, unless otherwise noted in the body of the report.

Analyses were performed at the Pace Analytical Services location indicated on the sample analyte page for analysis unless otherwise footnoted.

The laboratory report is being reissued on January 7, 2014. The sample ID for 92184127002 were revised, per client request.

If you have any questions concerning this report, please feel free to contact me.

Sincerely,

Angela Baioni

QUALIFIERS

Project: B-4159 WBS33507.1.1

Pace Project No.: 92184127

DEFINITIONS

DF - Dilution Factor, if reported, represents the factor applied to the reported data due to changes in sample preparation, dilution of the sample aliquot, or moisture content.

ND - Not Detected at or above adjusted reporting limit.

J - Estimated concentration above the adjusted method detection limit and below the adjusted reporting limit.

MDL - Adjusted Method Detection Limit.

PRL - Pace Reporting Limit.

RL - Reporting Limit.

S - Surrogate

1,2-Diphenylhydrazine (8270 listed analyte) decomposes to Azobenzene.

Consistent with EPA guidelines, unrounded data are displayed and have been used to calculate % recovery and RPD values.

LCS(D) - Laboratory Control Sample (Duplicate)

MS(D) - Matrix Spike (Duplicate)

DUP - Sample Duplicate

RPD - Relative Percent Difference

NC - Not Calculable.

SG - Silica Gel - Clean-Up

U - Indicates the compound was analyzed for, but not detected.

N-Nitrosodiphenylamine decomposes and cannot be separated from Diphenylamine using Method 8270. The result reported for each analyte is a combined concentration.

Acid preservation may not be appropriate for 2-Chloroethylvinyl ether, Styrene, and Vinyl chloride.

Pace Analytical is TNI accredited. Contact your Pace PM for the current list of accredited analytes.

TNI - The NELAC Institute.

LABORATORIES

PASI-C Pace Analytical Services - Charlotte

ANALYTE QUALIFIERS

- 1g The internal standard response is below criteria. No hits associated with this internal standard. Results unaffected by high bias.
- A+ The reaction of the soil preservative, sodium bisulfate, is known to react with humic acid in soils to produce ketones. Based upon method blank results, the laboratory feels the ketones in this sample are a result of that reaction.
- IO The internal standard response was outside the laboratory acceptance limits confirmed by reanalysis. The results reported are from the most QC compliant analysis.
- R1 RPD value was outside control limits.
- S2 Surrogate recovery outside laboratory control limits due to matrix interferences (confirmed by similar results from sample re-analysis).

Sampler Name & Signature on COC:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	4.
Samples Arrived within Hold Time:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	5.
Short Hold Time Analysis (<72hr):	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A	6.
Rush Turn Around Time Requested:	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A	7.
Sufficient Volume:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	8.
Correct Containers Used:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	9.
-Pace Containers Used:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	
Containers Intact:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	10.
Filtered volume received for Dissolved tests	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A	11.
Sample Labels match COC:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	12.
-Includes date/time/ID/Analysis Matrix:	SC	
All containers needing preservation have been checked:	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	13.
All containers needing preservation are found to be in compliance with EPA recommendation.	<input checked="" type="checkbox"/> Yes <input type="checkbox"/> No <input type="checkbox"/> N/A	
Exceptions: VOA, coliform, TOC, O&G, WI-DRO (water)	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No	
Samples checked for dechlorination:	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A	14.
Headspace in VOA Vials (>6mm):	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A	15.
Trip Blank Present:	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A	16.
Trip Blank Custody Seals Present	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No <input type="checkbox"/> N/A
