DESCRIPTION:	Bridge No. 13 on SR 1119 (Sugar Loaf Rd.) over Nicholson Creek

SUBJECT: Geotechnical Report – Design and Construction Recommendations

ICA Engineering, Inc. has completed the subsurface investigation for this project and submits the following recommendations.

I. SLOPE AND EMBANKMENT STABILITY

A. Slope Design

Recommend that all fill embankment be constructed at a ratio of 2:1 (H:V) or flatter.

B. Undercut

The following areas contain very soft to soft alluvial soils and should be undercut. These areas are shown by a double hatch symbol on the cross sections. The alluvial soils should be undercut as shown on the cross sections.

LINE	STATION	OFFSET (FEET)
-L-	13+75 to 14+75	12 LT to 33 RT
-L-	15+45 to 16+45	30 LT to 33 RT

It is recommended that 1,100 cubic yards of undercut be included in the project contract for embankment stability. An additional quantity of 150 cubic yards of undercut is recommended for inclusion in the contract as a contingency item, to be used at the discretion of the Engineer.

C. Geotextile for Soil Stabilization

It is recommended that 1,200 square yards of geotextile be included in the project contract for embankment stability at the following locations.

LINE	<u>STATION</u>	OFFSET (FEET)
-L-	13+75 to 14+75	12 LT to 33 RT
-L-	15+45 to 16+45	30 LT to 33 RT

An additional quantity of 150 square yards of geotextile for soil stabilization should be included in the project contract as a contingency item, to be used at the discretion of the Engineer.

II. SUBGRADE STABILITY

A. Undercut for Subgrade Stability

No soils were encountered consisting of highly plastic clays with plastic indices (PI) greater than 25. However, very soft to soft soils were encountered within 3 feet of the proposed subgrade. These soils could adversely impact the proposed pavement structure and should be undercut. These areas are shown by a double hatch symbol of the cross sections. The depth of undercut should be up to 3 feet or to suitable soil, whichever is less.

LINE	STATION	OFFSET (FEET)						
-L-	17+00 to 18+75	16 LT to 16 RT						

It is recommended that 400 cubic yards of undercut be included in the project contract for subgrade stability. The material may be used in embankment construction at the discretion of the Engineer. An additional quantity of 150 cubic yards of undercut is recommended for inclusion in the contract as a contingency item, to be used at the discretion of the Engineer.

B. Aggregate Subgrade

A quantity of 150 cubic yards of shallow undercut is recommended for inclusion in the contract as a contingency item, to be used at the discretion of the Engineer.

A quantity of 250 tons of Class IV material is recommended for inclusion in the contract as a contingency item, to be used at the discretion of the Engineer.

A quantity of 300 square yards of Geotextile for Soil Stabilization is recommended for inclusion in the contract item, to be used at the discretion of the Engineer.

C. Geotextile for Soil Stabilization

It is recommended that 600 square yards of geotextile be included in the project contract for subgrade stability at the following location.

LINE	STATION	OFFSET (FEET)
-L-	17+00 to 18+75	15 LT to 15 RT

A quantity of 150 square yards of geotextile for soil stabilization should be included in the project contract as a contingency item, to be used at the discretion of the Engineer.

III. BORROW SPECIFICATIONS

A. Borrow Criteria

Common borrow for embankment construction to subgrade shall meet Statewide criteria outlined in the Standard Specifications, Article 1018-2(A).

B. Select Granular Material

Select Granular Material for embankment construction on geotextile for soil stabilization shall meet the criteria outlined in Standard Specifications, Article 1016-3 Class II or III. Include 1,500

cubic yards of this material in the project contract. The backfill material should be placed for the full undercut depth above geotextile for soil stabilization.

LINE	STATION	OFFSET (FEET)
-L-	13+75 to 14+75	12 LT to 33 RT
-L-	15+45 to 16+45	30 LT to 33 RT
-L-	17+00 to 18+75	15 LT to 15 RT

A quantity of 300 cubic yards of Select Granular Material should be included in the project contract as a contingency item, to be used at the discretion of the Engineer.

C. **Shrinkage Factor**

Recommend a 15 percent shrinkage factor be used for earthwork calculations.

IV. **MISCELLANEOUS**

Reduction of Unclassified Excavation – Clearing and Grubbing A.

No significant loss is expected due to clearing and grubbing.

B. **Reduction of Unclassified Excavation – Unsuitable Unclassified Excavation**

No significant loss is expected due to unsuitable unclassified excavation.

STRONG ROCK ONLY MINOR	PERCHED WATER - WATER MAINTAINED ABOVE THE NORMAL GROUND WATER LEVEL BY THE PRESENCE OF AN INTERVENING IMPERVIOUS STRATUM.							
A <i>lues < 100 BPF</i> In Small and	RESIDUAL (RES.) SOIL - SOIL FORMED IN PLACE BY THE WEATHERING OF ROCK.							
SAPROLITE IS	<u>ROCK QUALITY DESIGNATION (ROD)</u> - A MEASURE OF ROCK QUALITY DESCRIBED BY TOTAL LENGTH OF ROCK SEGMENTS EQUAL TO OR GREATER THAN 4 INCHES DIVIDED BY THE TOTAL LENGTH OF CORE RUN AND EXPRESSED AS A PERCENTAGE.							
REQUIRES	SAPROLITE (SAP.) - RESIDUAL SOIL THAT RETAINS THE RELIC STRUCTURE OR FABRIC OF THE PARENT ROCK.							
OWS REQUIRED	SILL - AN INTRUSIVE BODY OF IGNEOUS ROCK OF APPROXIMATELY UNIFORM THICKNESS AND RELATIVELY THIN COMPARED WITH ITS LATERAL EXTENT, THAT HAS BEEN EMPLACED PARALLEL TO THE BEDDING OR SCHISTOSITY OF THE INTRUDED ROCKS.							
ep can be Tached	<u>SLICKENSIDE</u> - POLISHED AND STRIATED SURFACE THAT RESULTS FROM FRICTION ALONG A FAULT OR SLIP PLANE.							
R PICK POINT. BLOWS OF THE	STANDARD PENETRATION TEST (PENETRATION RESISTANCE/(SPT) - NUMBER OF BLOWS (N OR BPF) OF A 140 LB.HAMMER FALLING 30 INCHES REQUIRED TO PRODUCE A PENETRATION OF 1 FOOT INTO SOIL WITH A 2 INCH OUTSIDE DIAMETER SPLIT SPOON SAMPLER. SPT REFUSAL IS PENETRATION EQUAL TO OR LESS THAN 0.1 FOOT PER 60 BLOWS.							
FRAGMENTS	STRATA CORE RECOVERY (SREC.) - TOTAL LENGTH OF STRATA MATERIAL RECOVERED DIVIDED BY TOTAL LENGTH OF STRATUM AND EXPRESSED AS A PERCENTAGE.							
PIECES 1 INCH ED READILY BY	<u>STRATA ROCK QUALITY DESIGNATION (SROD)</u> A MEASURE OF ROCK QUALITY DESCRIBED BY TOTAL LENGTH OF ROCK SEGMENTS WITHIN A STRATUM EQUAL TO OR GREATER THAN 4 INCHES DIVIDED BY THE TOTAL LENGTH OF STRATA AND EXPRESSED AS A PERCENTAGE.							
	TOPSOIL (TS.) - SURFACE SOILS USUALLY CONTAINING ORGANIC MATTER.							
	BENCH MARK: BM #I, -BL- STA. 7+76.10, 86.17 RIGHT							
THICKNESS 4 FEET	ELEVATION: 2113.19 FEET							
5 - 4 FEET 6 - 1.5 FEET	NOTES:							
8 - 0.16 FEET 8 - 0.03 FEET 0.008 FEET	ELEVATIONS FOR BORINGS B-A, B-2 AND B-3 OBTAINED USING "B4822 LS TIN.TIN" DATED 8/11/2014							
	ELEVATIONS FOR BORINGS EBI-A, EBI-B, EB2-A AND EB2-B OBTAINED FROM FIELD SURVEY.							
AT, PRESSURE, ETC.	NT=NOT TESTED
