

INFORMATION ON FORCE MAIN SANITARY SEWER TIE-INS

The FSS flow can be restricted for a maximum of **5 hours at night** and **3 hours during the day**. Coordination and exact times/duration will be discussed at a preconstruction meeting prior to this work being started. If the Contractor can make the tie-ins within the restricted flow time periods identified, pumping may not be required. If tie-ins exceed the allotted times, pumping could be required. Regardless of the necessity for pumping, a pumping plan will be required to satisfy CFPUA, in the event pumping is necessary.
