STATE PROJECT: 50189.1.1 (U-5777) Turnkey

COUNTY: Catawba

DESCRIPTION: NC 127 from 1<sup>st</sup> Avenue to southeast of 2<sup>nd</sup> Avenue

SUBJECT: Geotechnical Recommendations for Pavement Design

The Geotechnical Engineering Unit has completed the evaluation of the pavement and subgrade investigation for this project and presents the following recommendations.

The proposed work consists of widening NC 127 to construct additional lanes and center raised medians.

The subgrade beneath the existing roadway consists of roadway embankment and residual soils. Predominant soil types are sandy clay (A-6) and silty clays (A-7-5, A-7-6).

The project mainline is approximately 65 percent embankment. Anticipated borrow will likely consists of residual sandy clay (A-6) and silty clay (A-7).

The length of this project is 0.264 miles.

The design soil type is a silty clay (A-7)

## AREAS OF SPECIAL GEOTECHNICAL INTEREST

## A. Highly Plastic Clays:

Locations of clays with a PI of 26 or greater.

LINE	STATION AND OFFSET	PI
-L-	16+80 NB OSL	32
-L-	16+80 NB ISL	28

## B. Ground Water or Trapped Water within the Pavement:

No ground water or trapped water was observed during this investigation.

## C. Soils with a High Moisture Content:

Locations of soils that were classified as wet to saturated or moisture exceeded the plastic limit.

LINE	STATION AND OFFSET	MOISTURE CONTENT

#### D. Existing Pavement

Overall the existing pavement was observed to be in fair to good condition. Surface pavement distress is primarily characterized by low to moderate severity longitudinal, transverse and some isolated fatigue cracking.

## **DESIGN AND CONSTRUCTION RECOMMENDATIONS**

## I. Subgrade Stability

## A. Aggregate Stabilization

## Stabilizer Aggregate

Recommend a quantity of 50 tons of Stabilizer Aggregate to be included in the project contract as a contingency item.

## B. Aggregate Subgrade (Type 1)

1) Recommend a quantity of 200 cubic yards of shallow undercut to be included in the project contract as a contingency item.

## 2) Geotextile for Soil Stabilization Recommend 600 square yards of Geotextile for Soil Stabilization to be included in the project contract as a contingency item.

## 3) Class IV Subgrade Stabilization

Recommend 400 tons of Class IV Subgrade Stabilization material to be included in the project contract as a contingency item. This material needs to be calculated as waste.

## II. <u>Miscellaneous</u>

## A. Proof Rolling

It is recommended that proof rolling not be performed on this project.

Note: For additional recommendations and quantities refer to the forthcoming Geotechnical Report-Design and Construction Recommendations.
