#### CAUTION NOTICE

THE SUBSURFACE INFORMATION AND THE SUBSURFACE INVESTIGATION ON WHICH IT IS BASED WERE MADE FOR THE PURPOSE OF STUDY, PLANNING AND DESIGN, AND NOT FOR CONSTRUCTION OR PAY PURPOSES. THE VARIOUS FIELD BORING LOGS, ROCK CORES AND SOLI TEST DATA AVAILABLE MAY BE REVIEWED OR INSPECTED IN RALEIGH BY CONTACTING THE N.C. DEPARTMENT OF TRANSPORTATION, GEOTECHNICAL ENGINEERING UNIT AT 1999 1707-6800. THE SUBSURFACE PLANS AND REPORTS, FIELD BORING LOGS, ROCK CORES AND SOIL TEST DATA ARE NOT PART OF THE CONTRACT.

CENERAL SOL AND ROCK STRATA DESCRIPTIONS AND INDICATED BOUNDARIES ARE BASED ON A GEOTECHNICAL INTERPRETATION OF ALL AVAILABLE SUBSURFACE DATA AND MAY NOT NECESSARILY REFLECT THE ACTUAL SUBSURFACE CONDITIONS BETWEEN BORINGS OR BETWEEN SAMPLED STRATA WITHIN THE BOREHOLE. THE LABORATORY SAMPLE DATA AND THE IN SITU UN-PLACED TEST DATA CAN BE RELIED ON ONLY TO THE DECREE OF RELIABILITY INHERENT IN THE STANDARD TEST METHOD. THE OBSERVED WATER LEVELS OR SOLL MOISTURE CONDITIONS INDICATED IN THE SUBSURFACE INVESTIGATIONS ARE AS RECORDED AT THE TIME OF THE INVESTIGATION. THESE WATER LEVELS OR SOLL MOISTURE CONDITIONS MAY VARY CONSIDERABLY WITH TIME ACCORDING TO CLIMATIC CONDITIONS INCLUDING TEMPERATURES, PRECIPITATION AND WIND, AS WELL AS OTHER NON-CLIMATIC FACTORS.

THE BIDDER OR CONTRACTOR IS CALIFONED THAT DETAILS SHOWN ON THE SUBSURFACE PLANS ARE PRELIMINARY ONLY AND IN MANY CASES THE FINAL DESIGN DETAILS ARE DIFFERENT, FOR BIDDING AND CONSTRUCTION PURPOSES, REFER TO THE CONSTRUCTION PLANS AND DOCUMENTS FOR FINAL DESIGN INFORMATION ON THIS PROJECT. THE DEPARTMENT DOES NOT WARRANT OR GUARANTEE THE SUFFICIENCY OR ACCURACY OF THE INVESTIGATION MADE, NOR THE INTERPRETATIONS MADE, OR OPHION OF THE DEPARTMENT AS TO THE TYPE OF MATERIALS AND CONSTRUCTIONS TO BE ENCOUNTERED. THE BIDDER OR CONTRACTOR IS CAUTIONED TO PERFORM INDEPENDENT SUBSURFACE INVESTIGATIONS AND MAKE INTERPRETATIONS AS NECESSARY TO CONFIRM CONDITIONS FOR UNITERDED IN THE PROJECT. THE CONTRACTOR SHALL HAVE NO CLAIM FOR ADDITIONAL COMPENSATION OR FOR AN EXTENSION OF TIME FOR ANY REASON RESULTIONS FOR MATHE ACTUAL CONTENS ENCOUNTERED AT THE SITE DIFFERING FROM THOSE INDICATED IN THE SUBSURFACE INFORMATION,

- NOTES: I, THE INFORMATION CONTAINED HEREIN IS NOT IMPLIED OR CUARANTEED BY THE N.C. DEPARTMENT OF TRANSPORTATION AS ACCURATE NOR IS IT CONSIDERED PART OF THE PLANS, SPECIFICATIONS OR CONTRACT FOR THE PROJECT. 2. BY HAVING REDUCETED THIS INFORMATION, THE CONTRACTOR SPECIFICALLY WAIVES ANY CLAIMS FOR INCREASED COMPENSATION OR EXTENSION OF TIME BASED ON DIFFERENCES BETWEEN THE CONDITIONS INDICATED HEREIN AND THE ACTUAL CONDITIONS AT THE PROJECT SITE.

# NORTH CAROLINA DEPARTMENT OF TRANSPORTATION DIVISION OF HIGHWAYS GEOTECHNICAL ENGINEERING UNIT SUBSURFACE INVESTIGATION

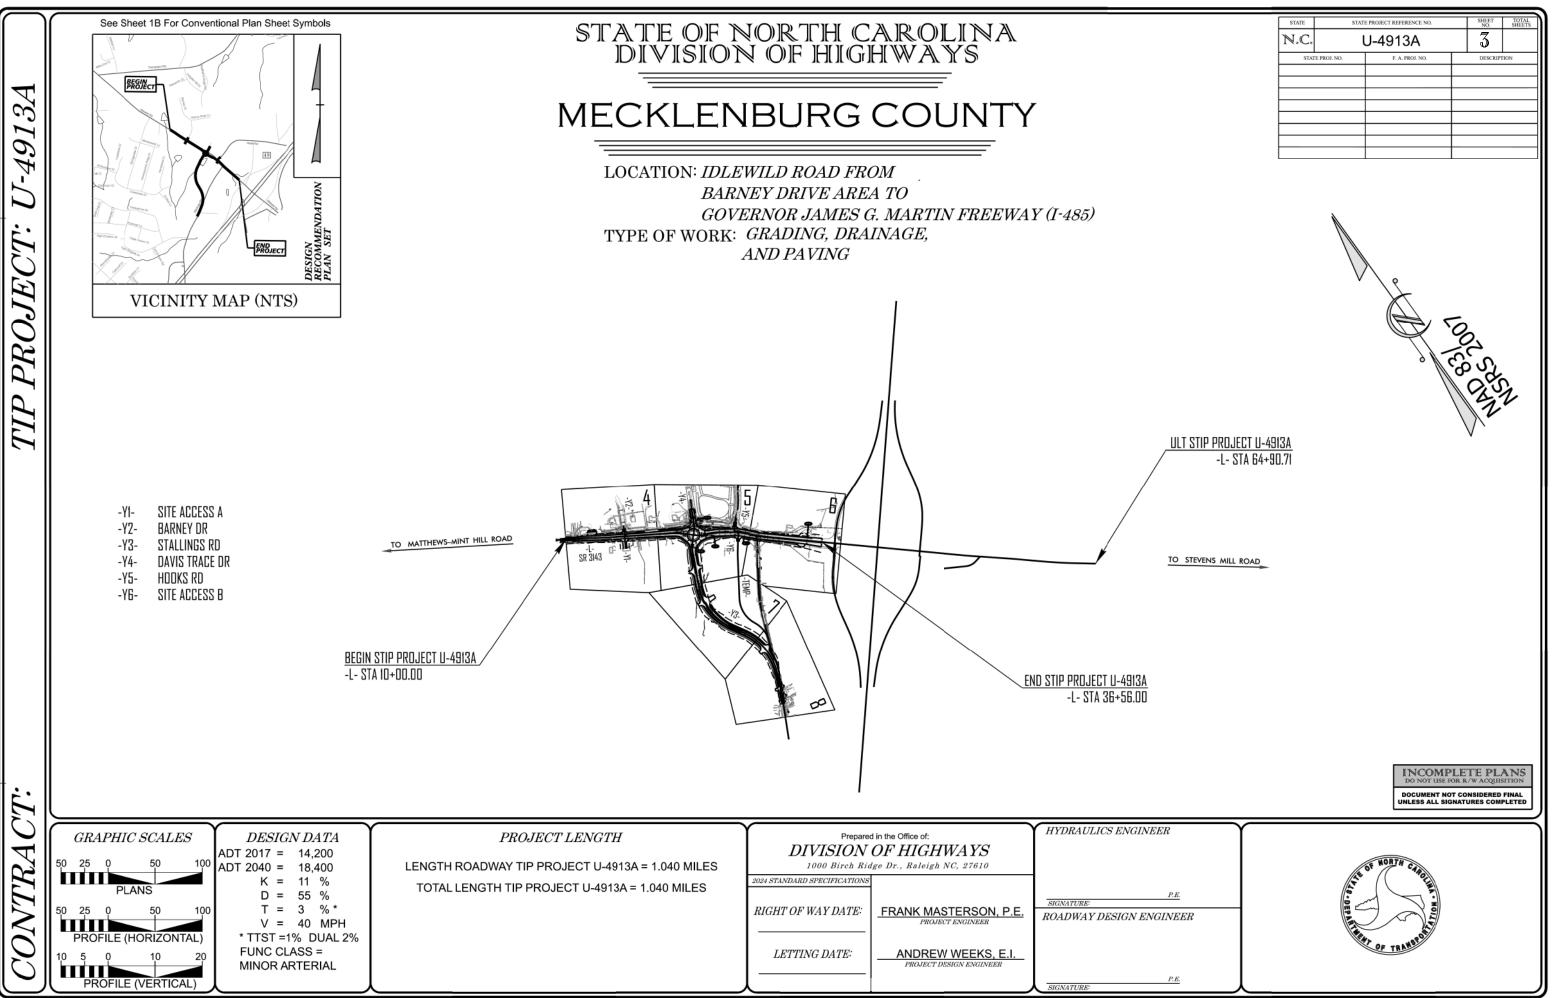

SOIL AND ROCK LEGEND, TERMS, SYMBOLS, AND ABBREVIATIONS

SOIL DESCRIPTION	GRADATION	ROCK DESCRIPTION	TERMS AND DEFINITIONS
SOIL IS CONSIDERED UNCONSOLIDATED, SEMI-CONSOLIDATED, OR WEATHERED EARTH MATERIALS THAT CAN	WELL GRADED - INDICATES A GOOD REPRESENTATION OF PARTICLE SIZES FROM FINE TO COARSE.	HARD ROCK IS NON-COASTAL PLAIN MATERIAL THAT WOULD YIELD SPT REFUSAL IF TESTED. AN INFERRED	ALLUVIUM (ALLUV.) - SOILS THAT HAVE BEEN TRANSPORTED BY WATER.
BE PENETRATED WITH A CONTINUOUS FLIGHT POWER AUGER AND YIELD LESS THAN 100 BLOWS PER FOOT ACCORDING TO THE STANDARD PENETRATION TEST (AASHTO T 206, ASTM D1586). SOIL CLASSIFICATION	UNIFORMLY GRADED - INDICATES THAT SOIL PARTICLES ARE ALL APPROXIMATELY THE SAME SIZE.	ROCK LINE INDICATES THE LEVEL AT WHICH NON-COASTAL PLAIN MATERIAL WOULD YIELD SPT REFUSAL. SPT REFUSAL IS PENETRATION BY A SPLIT SPOON SAMPLER EQUAL TO OR LESS THAN 0.1 FOOT PER 60	AQUIFER - A WATER BEARING FORMATION OR STRATA.
IS BASED ON THE AASHTO SYSTEM, BASIC DESCRIPTIONS GENERALLY INCLUDE THE FOLLOWING:	GAP-GRADED - INDICATES A MIXTURE OF UNIFORM PARTICLE SIZES OF TWO OR MORE SIZES.	BLOWS IN NON-COASTAL PLAIN MATERIAL, THE TRANSITION BETWEEN SOIL AND ROCK IS OFTEN REPRESENTED BY A ZONE OF WEATHERED ROCK.	ARENACEOUS - APPLIED TO ROCKS THAT HAVE BEEN DERIVED FROM SAND OR THAT CONTAIN SAND.
CONSISTENCY, COLOR, TEXTURE, MOISTURE, AASHTO CLASSIFICATION, AND OTHER PERTINENT FACTORS SUCH AS MINERALOGICAL COMPOSITION, ANGULARITY, STRUCTURE, PLASTICITY, ETC. FOR EXAMPLE,	ANGULARITY OF GRAINS	ROCK MATERIALS ARE TYPICALLY DIVIDED AS FOLLOWS:	ARGILLACEOUS - APPLIED TO ALL ROCKS OR SUBSTANCES COMPOSED OF CLAY MINERALS, OR HAVING
VERY STIFF, GRAY, SILTY CLAY, MOIST WITH INTERBEDDED FINE SAND LAYERS, HIGHLY PLASTIC, A-7-6	ANGULAR, SUBANGULAR, SUBROUNDED, OR ROUNDED.	WEATHERED NON-COASTAL PLAIN MATERIAL THAT WOULD YIELD SPT N VALUES >	A NOTABLE PROPORTION OF CLAY IN THEIR COMPOSITION, SUCH AS SHALE, SLATE, ETC.
SOIL LEGEND AND AASHTO CLASSIFICATION	MINERALOGICAL COMPOSITION	ROCK (WR) 100 BLOWS PER FOOT IF TESTED.	ARTESIAN - GROUND WATER THAT IS UNDER SUFFICIENT PRESSURE TO RISE ABOVE THE LEVEL AT WHICH IT IS ENCOUNTERED, BUT WHICH DOES NOT NECESSARILY RISE TO OR ABOVE THE GROUND
GENERAL   GRANULAR MATERIALS   SILT-CLAY MATERIALS   ORGANIC MATERIALS     CLASS.   ( ≤ 35%, PASSING *200)   ( > 35%, PASSING *200)   ORGANIC MATERIALS	MINERAL NAMES SUCH AS QUARTZ, FELDSPAR, MICA, TALC, KAOLIN, ETC.	CRYSTALLINE ROCK (CR) FINE TO COARSE GRAIN IGNEOUS AND METAMORPHIC ROCK THAT WOULD YIELD SPT REFUSAL IF TESTED, ROCK TYPE INCLUDES GRANITE,	SURFACE.
GROUP A-1 A-3 A-2 A-4 A-5 A-6 A-7 A-1, A-2 A-4, A-5	ARE USED IN DESCRIPTIONS WHEN THEY ARE CONSIDERED OF SIGNIFICANCE.	EINE TO COARSE CRAIN METAMORPHIC AND NON-COASTAL PLAIN	CALCAREOUS (CALC.) - SOILS THAT CONTAIN APPRECIABLE AMOUNTS OF CALCIUM CARBONATE.
CLASS. A-1-a A-1-b A-2-4 A-2-5 A-2-6 A-2-7 A-7-6 A-3 A-6, A-7		POCK (NCP)	COLLUVIUM - ROCK FRAGMENTS MIXED WITH SOIL DEPOSITED BY GRAVITY ON SLOPE OR AT BOTTOM OF SLOPE.
SYMBOL BOOOD STATE STA	SLIGHTLY COMPRESSIBLE LL < 31 MODERATELY COMPRESSIBLE LL = 31 - 50	COASTAL PLAIN COASTAL PLAIN SEDIMENTS CEMENTED INTO ROCK, BUT MAY NOT YIELD	CORE RECOVERY (REC.) - TOTAL LENGTH OF ALL MATERIAL RECOVERED IN THE CORE BARREL DIVIDED

5/16/2024

SUBJECT: Geotechnical Roadway Inventory Report

#### **PROJECT DESCRIPTION**

This project will consist of widening and realignment of Idlewild Road at a new proposed roundabout at its intersection with Davis Trace Dr. and realignment of Stallings Road in Mecklenburg County, North Carolina. The improvements to Idlewild Road will consist of roadway widening to the right side of the centerline with cut and fill heights on the order of 6 feet and 11 feet, respectively. Additionally, Idlewild Road will be realigned at the approaches to the proposed roundabout intersection at Davis Trace Dr. Stallings Road (-Y3- alignment) will be realigned from its current terminus to the new roundabout intersection along Idlewild Road. Proposed cut and fill heights along the new -Y3- alignment are on the order of 11 feet and 15 feet, respectively.

The following alignments are included as part of this investigation:

Alignment	<u>Stations</u>
-L- (Idlewild Road)	10+00 to 36+56
-RDBT-	10+00 to 13+96
-Y1- (Site Access A)	10+00 to 11+29
-Y2- (Barney Drive)	10+00 to 11+10
-Y3- (Stallings Road)	10+00 to 34+91
-Y4- (Davis Trace Drive)	10+00 to 13+69
-Y5- (Hooks Road)	10+00 to 11+53
-Y6- (Site Access B)	10+00 to 10+94

The geotechnical field investigation was conducted by CG2 during March 2024. An ATV-mounted CME 550x and Diedrich D50 drill rigs equipped with automatic hammers were used to advance the twenty-one (21) soil test borings performed during this investigation. Standard Penetration Tests (SPT) were performed at selected depths within each boring. Representative soil samples were collected for visual-manual classification in the field and evaluated by staff professionals working under the supervision of a licensed engineer. Select soil samples were submitted for laboratory analysis by an approved NCDOT M&T testing facility.

#### **PHYSIOGRAPHY AND GEOLOGY**

The project corridor is located within the Piedmont Physiographic Province of North Carolina. The Piedmont Physiographic Province generally consists of hills and ridges which are intertwined with an established system of draws, streams, and valleys. According to the 1985 Geologic Map of North Carolina, the bedrock under the site consists of metavolcanic rock interbedded with felsic to mafic tuffs and flowrock. Weathered rock encountered during this investigation consisted of Metavolcanic rock. Crystalline rock was not encountered at the test locations to the depths explored during this investigation.

Within the project alignment, much of the bedrock is overlain by near-surface material consisting of roadway embankment and artificial fill materials associated with the existing development in the area and residual soils. Residual soils are derived from in situ chemical and physical weathering of the rock in the area and vary in thickness. The residual soils in this region are typically finer grained with a higher clay content near the surface due to advanced weathering, and typically become coarser grained with increasing depth as the degree of weathering decreases. As the degree of weathering decreases, the residual soils generally retain the overall

appearance and fabric of the parent rock (sometimes referred to as "saprolite"). The boundary between soil and rock is not always sharply defined. A transitional zone termed "weathered rock" is often found overlying the parent bedrock. Weathered rock is defined as material requiring 100 blows with less than one foot of penetration from the SPT hammer.

#### **SOIL PROPERTIES**

Roadway embankment soils are similar in nature to residual soils and may be derived from nearby sources. Roadway embankment soils were observed along the existing roadways within the project corridor and specifically within Borings L 3400R and L 3600R. This material consists of medium stiff to stiff silty/sandy clay (A-6, A-7) with trace gravel and organics. Laboratory testing indicated a soil plasticity index (PI) of 13 for the encountered sandy clay roadway embankment soils.

Artificial fill soils were encountered at Borings L\_2350R and Y3\_3000R and extended to depths ranging from approximately 1<sup>1</sup>/<sub>2</sub> to 5<sup>1</sup>/<sub>2</sub> feet below existing grades. The artificial fill materials encountered consisted of soft to very stiff silty clay (A-7) with trace organics. Laboratory testing indicated a soil plasticity index (PI) of 28 and 32 for the encountered silty clay artificial fill soils.

Residual soils were encountered underneath the roadway embankment soils and artificial fill soils and underlying surficial organic soils along the majority of the project corridor. The residual soils generally consist of very soft to hard, sandy silts (A-4), clayey silts (A-5), sandy clays (A-6), and silty clay (A-7). Trace amounts of gravel-sized rock fragments and organics were encountered intermittently within the residual soils. Manganese oxide staining was observed at various depths within the residual soils. Laboratory testing indicated a soil plasticity index (PI) ranging from 13 to 39 for the encountered silty clay residual soils and a PI of 9 in the clayey silt residual soils.

Weathered rock was encountered at one of the boring locations along the proposed Stallings Road realignment, Boring Y3\_1300. The weathered rock encountered consists of Metavolcanic rock. The top of weathered rock was encountered at a depth of approximately 29.6 feet (EL 678.6) below the existing ground surface. Boring Y3\_1300 was terminated in the weathered rock at a depth of approximately 30.5 feet (EL 677.7).

#### GROUNDWATER

Groundwater measurements were attempted at the completion of drilling at each of the boring locations, at which time groundwater was encountered within four (4) of the borings at depths ranging from approximately 20 feet (EL 695.3) to 23 feet (EL 685.2) below existing grades. After a stabilization period of at least 24 hours, groundwater measurements were again attempted at each of the boring locations, at which time groundwater was encountered within eleven (11) of the borings at depths ranging from approximately 1 foot (EL 714.2) to 22 feet (EL 693.3) below existing ground surface. The soils encountered in the borings were generally described as moist to wet.

Water wells were not observed within the proposed construction corridor; however, wells may be encountered that were not observed during our field services.

#### **AREAS OF SPECIAL GEOTECHNICAL INTEREST**

Very soft to soft or very loose to loose soils were encountered along the project corridor, and were specifically encountered at the following locations:

<u>Alignment</u>	<u>Stations</u>	Offsets (ft)
-Y3-	20+00 to 22+00	LT to RT

Highly plastic soils (PI > 25) were encountered along the project, and were specifically encountered at the following location:

<u>Alignment</u>	<u>Stations</u>	Offsets (ft)
-L-	10+00 to 16+75	LT to RT

<u>Alignment</u>	<u>Stations</u>	Offsets (ft)
-L-	25+75 to 32+25	LT to RT
-Y1-	10+22 to 11+29	LT to RT
-Y2-	10+22 to 11+10	LT to RT
-Y3-	18+25 to 31+20	LT to RT
-Y4-	10+80 to 12+68	LT to RT
-Y5-	10+00 to 11+05	LT to RT

Artificial Fill soils were encountered along the project corridor, and were specifically encountered at the following locations:

<u>Alignment</u>	Stations	<u>Offsets (ft)</u>
-L-	22+20 to 23+30	LT to RT
-RDBT-	10+00 to 11+40	LT to RT
-Y3-	10+00 to 10+80	LT to RT

Shallow groundwater was not encountered within 6 feet of the proposed subgrade.

Crystalline rock was not encountered above or within 6 feet of the proposed grade.

Rock Outcrops: Rock outcrops were not observed within the project limits.

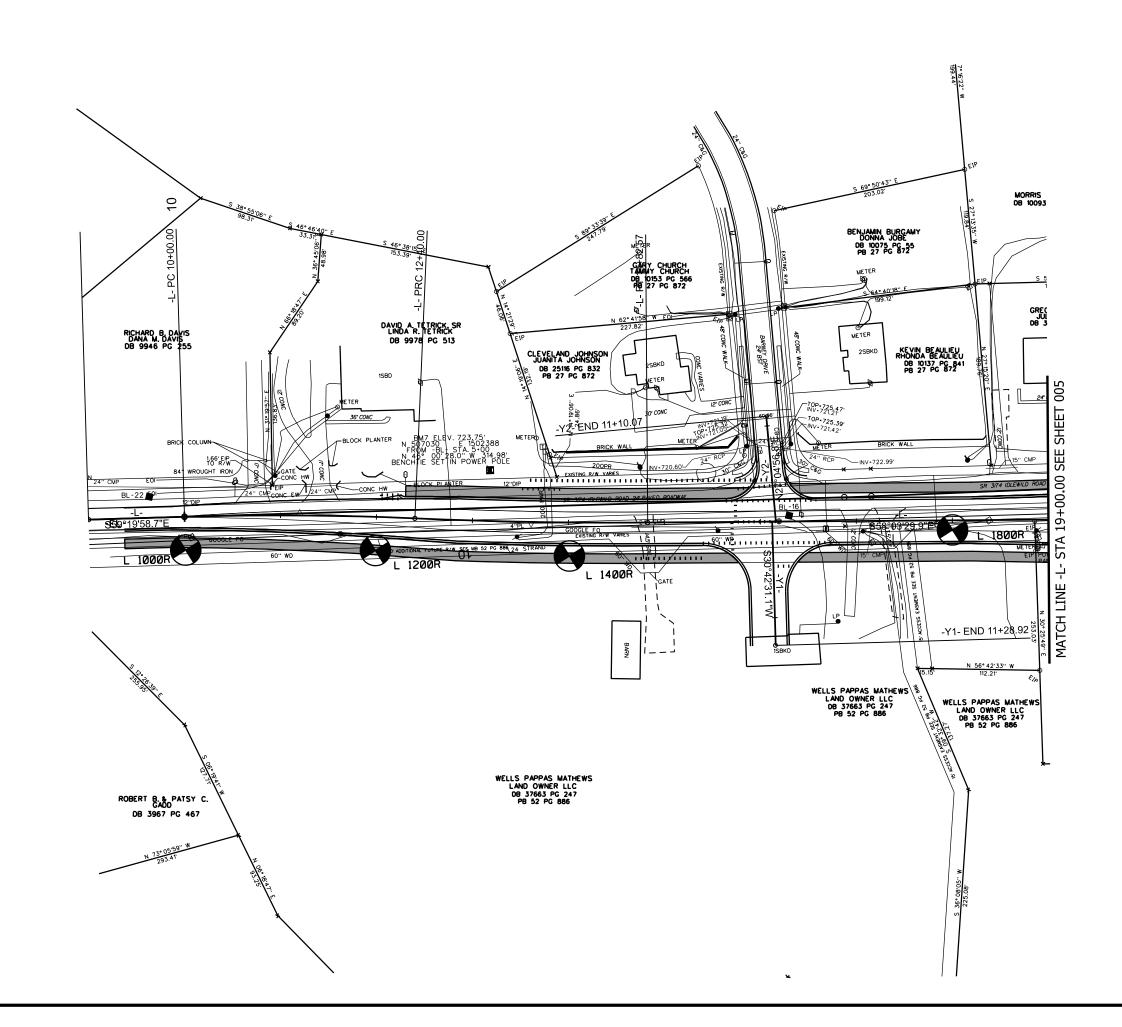

Sincerely, Carolinas Geotechnical Group, PLLC

— DocuSigned by: Xelley N. de Monthrun

Kelly N. de Montbrun, PE Senior Project Engineer
