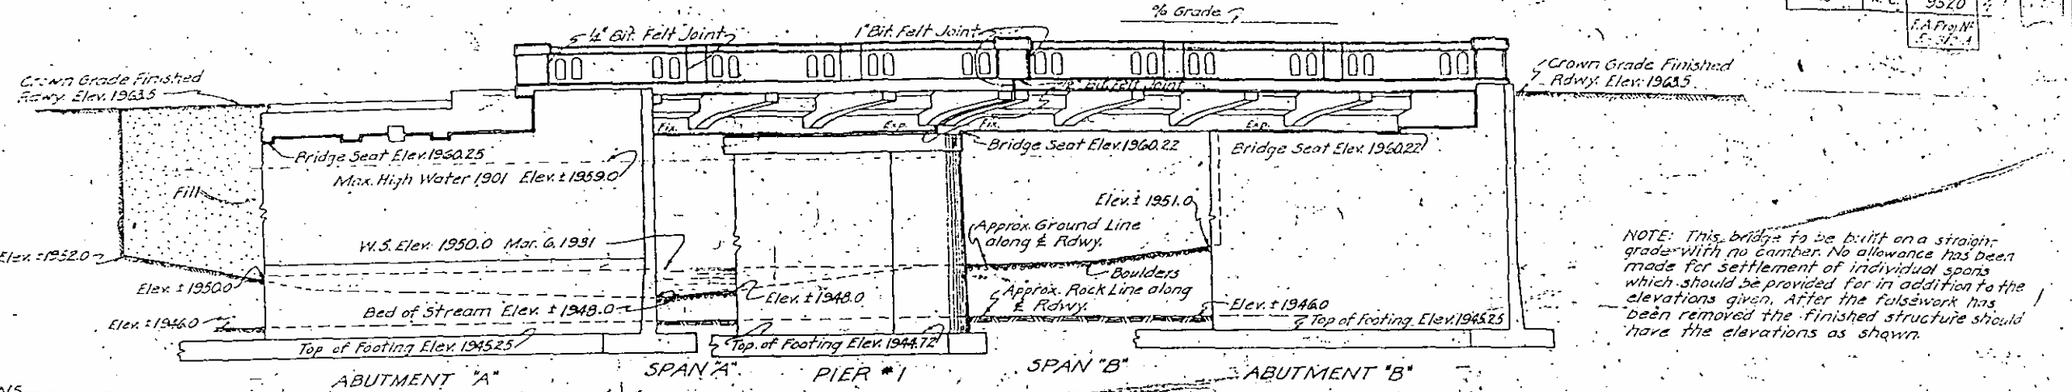
SKETCH SHOWING LOCATION OF PROPOSED & EXISTING WATER MAINS



ELEVATION

NOTE: This bridge to be built on a straight grade with no camber. No allowance has been made for settlement of individual spans which should be provided for in addition to the elevations given. After the falsework has been removed the finished structure should have the elevations as shown.

NOTE: The contractor will be required to remove the existing water main, maintain uninterrupted service, and replace water main on new structure. See Special Provisions.

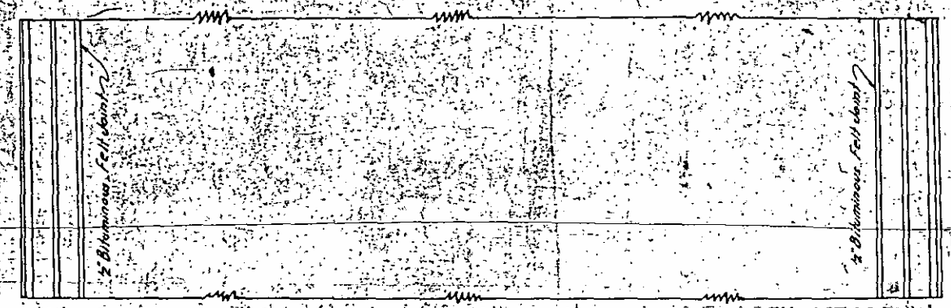
SECTION THRU. BRIDGE



PLAN

PLAIN CONCRETE OR REINFORCED CONCRETE PAVEMENTS
GRADED TOPSOIL, SAND CLAY, GRAVEL, SHALE, WATER-BOUND OR BITUMINOUS MACADAM ROADS

1. The wearing surface of the bridge shall consist of 2" of Class A concrete. See Specifications.
2. The top of the floor slab shall be coated with a heavy coat of asphaltic cement applied hot before the wearing surface is laid.
3. A ½" bituminous felt joint shall be placed between the curbs and the wearing surface. A ½" bituminous felt joint shall be placed at all piers and abutments parallel to the face thereof. The joint shall be cut to the crown of roadway and shall not be in more than two pieces.
4. The wearing surface shall be hand finished in accordance with the Specifications. Payment will be made at the Contract unit price for wearing surface. All material and workmanship as per specifications of the N.C. State Highway Commission.

Showing reinforcement in bottom of roadway and sidewalk slabs & in brackets

Showing arrangement of floor in top of roadway and sidewalk slabs

Design Data:

Specifications: N. C. State Highway Commission
Assumed Live Load: H-15
Impact Allowance for Live Load: See Specifications.

General Note:

Class "A" Concrete shall be used throughout. Maximum size of coarse aggregate to be 1½" except in hand rails. Maximum size of coarse aggregate in hand rails to be ¾".
All reinforcing steel shall be deformed bars.
All dimensions relative to reinforcement are to centers of bars. No splices of bars other than those shown on plans will be permitted. Reinforcing steel shall be securely held in position.
All exposed corners to be chamfered 1" except on hand rails and expansion joints. Hand rail corners to be chamfered ¾", baluster and expansion joint corners to be chamfered ½".
The girders, slabs and curbs must be poured at the same time, allowing no time for initial set to take place between them. Construction joints permitted only at top of curbs.
End frame plates to be placed on bridge, one on the inside of each right hand and post approaching bridge unless otherwise stated under "Special Provisions". The removal of these plates will be the duty of the Contractor. The Engineer shall make certain that the top of the floor slab is of the correct elevation for the type of surfacing used.
All material and workmanship as per the specifications of the N.C. State Highway Commission.
