

NCRoutes Field Descriptions

General Notes:

The ALRS Route supports a dominant route (1) only for both NCDOT on system and county routes. The 11-Digit RouteID Number is the 8-Digit Route Number with a three digit sap county code at the end. Fields dropped from the previous output product will be listed in the 'Removed Fields' section.

The Data Owner is the group that is responsible for maintaining that data item. There may be one or more additional business owners associated with that information, but the Data Owner should be the first group to contact when there is a question about the data in this layer.

Domains are represented as coded values and descriptions. The geodatabase version of the file contains the descriptions. The shapefile version contains the values, which tend to be abbreviated or numeric versions of the description. If the geodatabase table is exported, the resulting table will contain the values.

The NCRoutes is a dual-carriageway system meaning that divided roads (roads with medians) are represented as two separate lines and undivided roads are represented as a single line.

General Notes:	1
Field Definitions:.....	3
1. OBJECTID.....	3
2. Shape	3
3. Division	3
4. MaintCntyCode	3
5. RouteID.....	3
6. RouteClass.....	4
7. RouteNumber.....	4
8. RouteQualifier	4
9. RouteInventory.....	5
10. RouteName	5
11. BeginMP	6
12. EndMP	6
13. RouteMaintCode	6
Removed Fields	6

Field Definitions:

1. OBJECTID

Common Name	Object Identifier
Definition	A unique number that is automatically generated for each segment.
Data Owner	GIS Unit
Extent	Every Segment
Values	Positive numbers
Notes	The Object Identifier changes with each publication.

2. Shape

Common Name	Shape
Definition	Stores the geometry information for each segment; Used by GIS software to display the line.
Data Owner	GIS Unit
Extent	Every Segment
Values	Polyline ZM

3. Division

Common Name	Division
Definition	The NCDOT division number for each route segment.
Data Owner	NC DOT
Extent	Every Segment
Values	Positive numbers; Data Range: 1-14
Notes	

4. MaintCntyCode

Common Name	Maintenance County Name (Sap County Code)
Definition	For state-maintained roads: the county responsible for maintaining the section of road. For non-state maintained roads: the county that the segment is located in.
Data Owner	GIS Unit
Extent	Every segment
Values	Coded domain – see metadata (or contact the GIS Unit) for a full list of codes
Notes	The primary county field.

The coded domain values reflect the alphabetical order of North Carolina's counties, with a range from 001 (Alamance County) to 100 (Yancey County).
Codes for roads maintained by NCDOT, but cross the state boundary: 901 (Georgia), 902 (South Carolina), 903 (Tennessee), 904 (Virginia).

In general, the MaintCntyCode will have the same value as other county fields, with exceptions around county boundaries. For example, a portion of SR-1828 is located in Yadkin County, but maintained by Iredell County. The MaintCntyCode for this section is 049 (Iredell County).

5. RouteID

Common Name	MilePoint ID
Definition	The 11-digit composite route number

Data Owner	GIS Unit
Extent	Every segment
Values	Positive 11-digit numbers (text field)
Notes	A unique identifier for routes across the state; Should be used as the route identifier when performing LRS analysis with route/milepost referencing.

6. RouteClass

Common Name	Route Class
Definition	The NCDOT route class code for the dominant route
Data Owner	GIS Unit
Extent	Every segment except for gap segments
Values	Coded domain
Notes	The route class is represented by the 1st digit of the RouteID.

Domain:

Value	Description	Notes
1	Interstate (I)	State-maintained
2	US Route (US)	State-maintained
3	NC Route (NC)	State-maintained
4	Secondary Route (SR)	State-maintained
5	Non-System (NS)	Not state maintained
6	Other State Agency Route (SA)	Federal-aid roads maintained by other state agencies
7	Federal Route (FED)	Federal-aid roads maintained by federal agencies
80	Ramp (RMP)	Typically state-maintained, but not counted towards state-maintained mileage
81	Rest Areas (RST)	Typically state-maintained, but not counted towards state-maintained mileage
82	Non-System Ramp	Not state maintained
9	Projected (PRJ)	Generalized locations of major facilities that have not yet been built

7. RouteNumber

Common Name	Route Number
Definition	The NCDOT route number for the dominant route
Data Owner	GIS Unit
Extent	Every segment
Values	Positive numbers
Notes	The route number is represented by the 4 th – 8 th digits of the RouteID.

8. RouteQualifier

Common Name	Route Qualifier
Definition	An additional code that further defines the dominant route
Data Owner	GIS Unit
Extent	Every segment

Values	Coded domain
Notes	On state-maintained routes, values of 0 (Normal) indicate the regular route, while other values indicate a related route (e.g., I-95 and I-95 Business). The Route Qualifier is represented by the 2 nd digit of the Route ID (with the exception of Ramps and Rest Areas, where the first two digits of the Route ID are 80 and 81, respectively).

Domain:

Value	Description	Notes
0	Normal Route	On most routes, this indicates the normal route. If the route class is FED, then 0 (Normal) is the Blue Ridge Parkway.
1	Alternate Route	If the route class is FED, then 1 (Alternate) is military-owned.
2	Bypass Route	
5	East Route	Used only for US-19 East, which is a different route than US-19
6	West Route	Used only for US-19 West, which is a different route than US-19
7	Spur/Connector Route	If the Route Class is Interstate, then the route is a spur If the Route Class is US or NC Route, then the route is a connector
8	Truck Route	
80	Ramp	
81	Rest Area	
82	Non-State Ramp	
9	Business Route	

9. RouteInventory

Common Name	Route Direction
Definition	The NCDOT route direction for dominant route
Data Owner	GIS Unit
Extent	Every segment
Values	Coded domain
Notes	Inventory directions are coded with Inventory (0) or Clockwise (8). All other values indicate the non-inventory direction of the route. To determine if the route is one-way or both directions of travel, use the One-way Direction Flag (i.e., Inventory Route Direction and Both Directions for the One-way Direction Flag imply that the route is bidirectional). Route Inventory is represented by the 3 rd position of the Route ID and the 8-Digit Route Number.

Domain:

Value	Description	Notes
0	Inventory	Includes bidirectional, Northbound, Eastbound, and one-way inventory
4	Non-Inventory (Southbound)	On secondary routes, rest areas and non-state maintained route classes, "Southbound" means non-inventory
6	Non-Inventory (Westbound)	Primary routes only (Interstates, US Routes, and NC Routes)
8	Inventory (Clockwise)	Primary routes only (Interstates, US Routes, and NC Routes)
9	Non-Inventory (Counterclockwise)	Primary routes only (Interstates, US Routes, and NC Routes)

10. RouteName

Common Name	Route Name
Definition	The NCDOT name of the dominant route

Data Owner	GIS Unit
Extent	Every segment
Values	Text
Notes	It is a abbreviated concatenation of Route Class, Route Number and Route Qualifier.

11. BeginMP

Common Name	Beginning milepost for the dominant route
Definition	The beginning milepost at that point on the segment.
Data Owner	GIS Unit
Extent	Every segment
Values	Positive numbers; six decimal places

12. EndMP

Common Name	Ending milepost for the dominant route
Definition	The ending milepost at that point on the segment.
Data Owner	GIS Unit
Extent	Every segment
Values	Positive numbers; six decimal places

13. RouteMaintCode

Common Name	Route Status Code
Definition	The system status of the route
Data Owner	GIS Unit
Extent	Every segment
Values	Text; Derived
Notes	This field has a value of "System" on every record, with the exception of Non-System routes. System Routes= Route Class IN (1,2,3,4,80,81,9) ; Non-System = Route Class IN (5,6,7,82)
