Summary

This dataset was made available as part of the Project ATLAS initiative at NCDOT to support the Environmental Analysis Unit (EAU) Mitigation and Modeling Unit with project delivery in the development phase. Data is current as of June 2019.

This dataset contains USFWS identified stream reaches for the Atlantic Pigtoe. This dataset was created by USFWS to highlight areas of known or potential species occurrence that could trigger consultation under the ESA, as part of a programmatic bridge/culvert consultation agreement between USFWS and NCDOT/FHWA/USACE.

Please read the Practitioner's Guide for the Eastern Mussel Programmatic Opinion for applicability of bridge replacement, repair and rehabilitation projects and reference Appendix B for Section 7 Programmatic Process for bridge replacement/replacement/rehabilitation and culvert replacement and extension and bridge to culvert replacement.

https://connect.ncdot.gov/resources/Environmental/EAU/BSG/Documents/Mussel%20Programmatic/Practitioner%20Guide%20to%20Eastern%20Mussel%20Programmatic_October%202020.pdf

Full programmatic opinion is located on EAU BSG website.

<https://connect.ncdot.gov/resources/Environmental/EAU/BSG/Documents/Mussel%20Programmatic/PBO%20for%20Yellow%20Lance%20Tar%20River%20Spiny%20Dwarf%20Wedge%20Mussel%20Atlantic%20Pigtoe%20or%20Bridge-Culvert%20Replacements%2020190911.pdf>

Description

The Atlantic Pigtoe Identified Stream Reaches dataset is a polyline layer depicting streams with historical / known / potential in the Neuse and Tar River basins for Atlantic Pigtoe.

The shell of the Atlantic Pigtoe is a chunky, rhombus shape, like that of a pig's hoof/toe. There is a distinct posterior ridge. The outer surface of the shell is yellow to dark brown and parchment-like, while the inner layer is iridescent blue to salmon, white, or orange. Although larger specimens exist, the Atlantic pigtoe rarely exceeds 2 inches in length. Young individuals may have greenish rays across the entire shell surface. When collected fresh, the interior surface (nacre) in the shell tends to be salmon colored and sometimes iridescent. Atlantic pigtoe has interlocking hinge "teeth" on the inside of the shell to help keep the two valves in proper alignment.

The dataset is linear stream features depicting historical/known/potential habitat for listed/proposed species, as of 2019. Use of these datasets is solely for the use as part of the decision process for the Programmatic bridge/culvert consultation agreement between USFWS and NCDOT/FHWA/USACE. These datasets are intended

to be updated annually and provided to NCDOT personnel for use in the decision process for the Programmatic bridge/culvert agreement between USFWS and NCDOT/FHWA/USACE.

These datasets were created for the sole purpose of informing the decision process for the Programmatic bridge/culvert agreement between USFWS and NCDOT/FHWA/USACE. These data sets do not replace Heritage element occurrence data, NCWRC PAWS data, nor other USFWS publicly available species occurrence or habitat data.

Credits

The USFWS Raleigh Ecological Service's Aquatic Biologist was tasked to create this dataset as part of the Programmatic bridge/culvert agreement between USFWS and NCDOT/FHWA/USACE.

Annual maintenance of this dataset is handled by the USFWS Raleigh Ecological Service who sends datasets to the Biological Surveys Group within NCDOT.

Support and maintenance of the enterprise spatial database where this data resides is handled by NCDIT's Transportation GIS Unit.

Use limitations

The North Carolina Department of Transportation shall not be held liable for any errors in this data. This includes errors of omission, commission, errors concerning the content of the data, and relative and positional accuracy of the data. This data cannot be construed to be a legal document. Primary sources from which this data was compiled must be consulted for verification of information contained in this data.

Datasets developed under Project ATLAS do not replace any field work for future projects and may not be used as a replacement for site visits / field surveys by qualified licensed professionals and hence should be used only as a supporting platform for decision making. Use of this dataset for project scoping or screening is merely pre-decisional.

HUC10 watersheds -- <http://data-ncdenr.opendata.arcgis.com/datasets/dwr-10-digit-huc-watersheds>

Species data layer was created by initially selecting stream segments (hydrology) that overlapped NC Natural Heritage Element Occurrence (EO) polygons for each species, then connecting stream segments between EOs, and extending stream segments to headwaters. HUC10 watersheds were then selected based on whether they contained species stream segments.
