

Kemps Ridley Turtle Potential Habitat, April 2023 - NC Department of Transportation

File Geodatabase Feature Class

Tags

Kemps Ridley Turtle, *Lepidochelys kempii*, expert model, Transportation, United States Fish and Wildlife Service, USFWS, National Heritage Program, NHP, NRTR, NCDOT, Environment, Location, North Carolina, ATLAS

Summary

This dataset was originally created in January 2022 as part of the Project ATLAS initiative at NCDOT to support the Environmental Analysis Unit (EAU) Mitigation and Modeling Unit with project delivery in the development phase.

This model identifies year-round potential suitable habitat for the species. Model range output is for "high" potential habitat areas only. Areas not within the "high" range are not considered suitable habitat for Kemps Ridley.

The Optimal survey window is April to August.

This dataset supports the production of the Natural Resources Technical Report (NRTR). This dataset also contains information that may assist biologists in preparing background information for field surveys, in order to address protected species for Threatened & Endangered Species Survey Reports, and/or Biological Assessments.

Description

The Kemps Ridley Turtle Potential Habitat dataset is a polygon layer depicting high potential habitat locations for Kemps Ridley Turtle in NC counties that have a United States Fish and Wildlife Service (USFWS) "current" status listing.

Kemps Ridley (*Lepidochelys kempii*) is the smallest of the sea turtles that visit North Carolina's coast and has been sighted in most coastal counties. While the majority of this sea turtle's nesting occurs in Mexico, the species is known to nest on North Carolina beaches infrequently. Sightings of the species exist for most coastal counties. Kemp's ridley sea turtle can lay eggs as many as three times during the April to June breeding season. Kemp's ridley sea turtles prefer beach sections that are backed up by extensive swamps or large bodies of open water having seasonal narrow ocean connections and a well-defined elevated dune area. The species prefers neritic areas with sandy or muddy bottoms.

Natural Heritage Program (NHP) Tier 2 data from 2018 indicate 7 NHP Elemental Occurrences (EOs) for Kemp's ridley turtle. All records are current. NHP records used at the time of model were from January 2018.

County Information

- NHP listed counties: Brunswick, Carteret, Currituck, Dare, Hyde, New Hanover, Onslow, Pender.
- USFWS current listed counties: Beaufort, Brunswick, Carteret, Currituck, Dare, Hyde, New Hanover, Onslow, Pamlico, Pender.

- Additions proposed by reviewers: Add Camden, Craven, Pamlico, Pasquotank, Tyrrell, Washington – comments provided by Matthew Godfrey (NCWRC)

For more information please click here

<https://xfer.services.ncdot.gov/gisdot/Metadata/Atlas/TechDocs/>

- Datasets developed under Project ATLAS do not replace any NRTR work for future projects and may not be used as a replacement for site visits / field surveys by qualified professionals and hence should be used only as a supporting platform for decision making. Use of this dataset for project scoping or screening is merely pre-decisional.

Credits

The Environmental Analysis Unit (EAU) Mitigation and Modeling Unit within NCDOT was tasked to create this dataset. This dataset supports the production of the Natural Resources Technical Report (NRTR).

Annual maintenance of this dataset is handled by the EAU. Support and maintenance of the enterprise spatial database where this data resides is handled by NCDOT's Transportation GIS Unit.

Use limitations

The North Carolina Department of Transportation shall not be held liable for any errors in this data. This includes errors of omission, commission, errors concerning the content of the data, and relative and positional accuracy of the data. This data cannot be construed to be a legal document. Primary sources from which this data was compiled must be consulted for verification of information contained in this data.

Datasets developed under Project ATLAS do not replace any NRTR work for future projects and may not be used as a replacement for site visits / field surveys by qualified professionals and hence should be used only as a supporting platform for decision making. Use of this dataset for project scoping or screening is merely pre-decisional.

DATA QUALITY REPORT - QUANTITATIVE ATTRIBUTE ACCURACY ▶

MEASURE DESCRIPTION

- ArcGIS Online (AGOL) Review

- o A model prediction file was shared with select reviewers on ArcGIS Online. Points were placed within the USFWS potential habitat as well as the model potential habitat in order to solicit feedback. Reviewers could place additional comments for consideration by modeler.
- o AGOL review was completed in May 2019 on draft version of this model.

- Independent Data Review

- o Describe data sources – Phase 1 and 2 open waters, DCM shorelines (2009 and 2016).
- o Describe methods – Current aerial imagery was used to determine likelihood of habitat. Open water layers were used to determine potential habitat.

Lineage ►

LINEAGE STATEMENT

ArcGIS Model Builder version 10.4.1 was used to build a model

Input Layers:

Layer 1

- Layer name: Phase_I_Open_Water and Phase_II_Open_Water
- Layer description:
 - o Layer obtained from Sweeping Environmental ATLAS team.
 - o Vector layer for all open water areas throughout the state. Two parts but combined in model.
- Layer selection justification:
 - o This data contains open waters for the state that have been merged from two files into one and then selected for any polygons large enough to consist of bays (Pamlico Sound, Core Sound, etc.) and ocean waters.
 - "Habitat" versus "Nonhabitat" designations:
 - o Areas of open coastal water are potential habitat for the Kemp's ridley turtle.

Layer 2

- Layer name: CountyBoundaryShoreline
- Layer description:
 - o Select Water from County Boundary shapefile.
- Layer selection justification:
 - o Species possible within areas designated "Water" in CountyBoundaryShoreline layer.
 - "Habitat" versus "Nonhabitat" designations:
 - o Species possible within areas designated "Water" in CountyBoundaryShoreline layer.

Layer 3

- Layer name: dcm_oceanfront_shorelines
- Layer description:
 - o Division of Coastal Management shoreline data from 2009 and 2016.
- Layer selection justification:
 - o Data layer was incorporated into the model with 2009 and 2016 shorelines (to ensure complete coverage of coast) buffered 1400 feet. DCM shorelines were variable in their actual distance from shorelines on aerial photography. 1400 feet was selected to ensure all coastal beaches, including the primary dune line were included in the model.
- "Habitat" versus "Nonhabitat" designations:
 - o Area within buffer is potential habitat.

Layer 4

- Layer name: nheo_tier2
- Layer description:
 - o Tier 2 data acquired from NC Natural Heritage Program.
- Layer selection justification:
 - o Data layer was incorporated into model with any Kemp's ridley turtle records selected and included in final merged output file.
