Leatherback Turtle Potential Habitat, April 2023 - NC Department of Transportation

File Geodatabase Feature Class

Tags

Leatherback Turtle, Dermochelys coriacea, expert model, Transportation, United States Fish and Wildlife Service, USFWS, National Heritage Program, NHP, NRTR, NCDOT, Environment, Location, North Carolina, ATLAS

Summary

This dataset was originally created in January 2022 as part of the Project ATLAS initiative at NCDOT to support the Environmental Analysis Unit (EAU) Mitigation and Modeling Unit with project delivery in the development phase.

This model identifies year-round potential suitable habitat for the species. Model range output is for "high" potential habitat areas only. Areas not within the "high" range are not considered suitable habitat for leatherback turtle.

The Optimal survey window is April to August.

This dataset supports the production of the Natural Resources Technical Report (NRTR). This dataset also contains information that may assist biologists in preparing background information for field surveys, in order to address protected species for Threatened & Endangered Species Survey Reports, and/or Biological Assessments.

Description

The Leatherback Turtle Potential Habitat dataset is a polygon layer depicting high potential habitat locations for Leatherback Turtle in NC counties that have a United States Fish and Wildlife Service (USFWS) "current" status listing.

Leatherback Turtle (*Dermochelys coriacea*) are distributed world-wide in tropical waters of the Atlantic, Pacific, and Indian oceans. They are generally open ocean species and may be common off the North Carolina coast during certain times of the year. However, in northern waters leatherbacks are reported to enter bays, estuaries, and other inland bodies of water. Major nesting areas occur mainly in tropical regions. In the United States, primary nesting areas are in Florida. Nests are also known from Georgia, South Carolina, and North Carolina as well. Nesting occurs from April to August. Leatherbacks need sandy beaches backed with vegetation in the proximity of deep water and generally with rough seas. Beaches with a relatively steep slope are usually preferred.

Natural Heritage Program (NHP) Tier 2 data from 2018 indicate 8 Elemental Occurrences (EOs) for leatherback turtle in North Carolina. Two of the 17 records are historic. NHP records used at the time of model were from January 2018.

County Information

- NHP listed counties: Brunswick, Carteret, Craven, Dare, Hyde, New Hanover
- USFWS current listed counties, Brunswick, Carteret, Currituck, Dare, Hyde, New Hanover, Onslow, Pender.

Additions proposed by reviewers: Remove Craven – comments provided by Matthew Godfrey (NCWRC)

 Datasets developed under Project ATLAS do not replace any NRTR work for future projects and may not be used as a replacement for site visits / field surveys by qualified professionals and hence should be used only as a supporting platform for decision making. Use of this dataset for project scoping or screening is merely predecisional.

Credits

The Environmental Analysis Unit (EAU) Mitigation and Modeling Unit within NCDOT was tasked to create this dataset. This dataset supports the production of the Natural Resources Technical Report (NRTR).

Annual maintenance of this dataset is handled by the EAU. Support and maintenance of the enterprise spatial database where this data resides is handled by NCDIT's Transportation GIS Unit.

Use limitations

The North Carolina Department of Transportation shall not be held liable for any errors in this data. This includes errors of omission, commission, errors concerning the content of the data, and relative and positional accuracy of the data. This data cannot be construed to be a legal document. Primary sources from which this data was compiled must be consulted for verification of information contained in this data.

Datasets developed under Project ATLAS do not replace any NRTR work for future projects and may not be used as a replacement for site visits / field surveys by qualified professionals and hence should be used only as a supporting platform for decision making. Use of this dataset for project scoping or screening is merely predecisional.

Lineage ▶

LINEAGE STATEMENT

ArcGIS Model Builder version 10.4.1 was used to build a model

Input Layers:

Layer 1

- Layer name: Phase_I_Open_Water and Phase_II_Open_Water
- Layer description:
- o Layer obtained from Sweeping Environmental ATLAS team.
- o Vector layer for all open water areas throughout the state. Two parts but combined in model.
- Layer selection justification:
- o This data contains open waters for the state that have been merged from two files into one and then selected for any polygons large enough to consist of bays (Pamlico Sound, Core Sound, etc.) and ocean waters.
- "Habitat" versus "Nonhabitat" designations:
- o Areas of open coastal water are potential habitat for the leatherback turtle.

Layer 2

- Layer name: CountyBoundaryShoreline
- Layer description:
- o Select Water from County Boundary shapefile.
- Layer selection justification:
- o Species possible within areas designated "Water" in CountyBoundaryShoreline layer.
- "Habitat" versus "Nonhabitat" designations:

o Species possible within areas designated "Water" in CountyBoundaryShoreline layer.

Layer 3

- Layer name: dcm_oceanfront_shorelines
- Layer description:
- o Division of Coastal Management shoreline data from 2009 and 2016.
- Layer selection justification:
- o Data layer was incorporated into the model with 2009 and 2016 shorelines (to ensure complete coverage of coast) buffered 1400 feet. DCM shorelines were variable in their actual distance from shorelines on aerial photography. 1400 feet was selected to ensure all coastal beaches, including the primary dune line were included in the model.
- "Habitat" versus "Nonhabitat" designations:
- o Area within buffer is potential habitat.

Layer 4

- Layer name: nheo tier2
- Layer description:
- o Tier 2 data acquired from NC Natural Heritage Program.
- Layer selection justification:
- o Data layer was incorporated into model with any leatherback turtle records selected and included in final merged output file.

Geodatabase was forwarded on to the GIS Unit for publishing as part of data for project ATLAS.
