File Geodatabase Feature Class

Tags

point, religious institutions, church, synagogues, mosques, temples, places of worship, institutions, structure, Transportation, NCDOT, Environment, Location, North Carolina, ATLAS, society, Planning & Cadastral

Summary

This dataset was originally created in January 2019 as part of the Project ATLAS initiative at NCDOT to support the Environment Analysis Unit (EAU) with project delivery in the development phase.

This dataset represents places of worship across the state of North Carolina. It was derived from the ESRI layer package "USA Institutions", published on February 5, 2018. A subset of this layer was extracted by selecting only records with feature types equal to 'Place of Worship'. Records were then reviewed for relevance. No new data was created / added to this layer since its inception.

Description

The Places of Worship dataset is a statewide point layer that depicts places of worship including churches, synagogues, mosques, and temples. It was derived from an ESRI layer titled "USA Institutions" in June 2018, which represents point locations within the United States for common institutional landmarks. Features with type equal to 'Place of Worship' were exported from the source layer to create this Project ATLAS dataset. This data is current as of June 2018.

Datasets developed under Project ATLAS may not be used as a replacement for site visits / field surveys by licensed professionals and hence should be used only as a supporting platform for decision making. Use of this dataset for project scoping or screening is merely pre-decisional.

Credits

The ATLAS EAU within NCDOT was tasked to create this dataset.

Support and maintenance of the enterprise spatial database where this data resides is handled by NCDIT's Transportation GIS Unit.

Use limitations

The North Carolina Department of Transportation shall not be held liable for any errors in this data. This includes errors of omission, commission, errors concerning the content of the data, and relative and positional accuracy of the data. This data cannot be construed to be a legal document. Primary sources from which this data was compiled must be consulted for verification of information contained in this data.

Datasets developed under Project ATLAS may not be used as a replacement for site visits / field surveys by licensed professionals and hence should be used only as a supporting platform for decision making. Use of this dataset for project scoping or screening is merely pre-decisional.

Lineage ►

LINEAGE STATEMENT

The ESRI layer package "USA Institutions" (<http://www.arcgis.com/home/item.html?id=007ff07891e34e339a6da82a5c44fd31>) provides the locations of hospitals, educational institutions, places of worship, government offices, cemeteries, libraries, and museums throughout the country. Each institution is named and shows the state and county it resides in. This dataset was compiled in January 2019 . The layer package was spatially queried for records falling within the North Carolina state boundary. Records were then sub-queried based on FEATTYPE = 'Place of Worship'. Features were examined for accuracy and completeness.

The resulting dataset contains 18,231 features.

PROCESS STEP ►

DESCRIPTION

The ESRI layer package "USA Institutions" was spatially queried for records falling within the North Carolina state boundary. Records were then sub-queried based on FEATTYPE = 'Place of Worship'. Feature totals were cross-referenced with 2010 US Religion Census Data to ensure a comparable data scale (15,737 congregations in NC according to 2010 census; 18,231 features according to this dataset); Features across the state were sampled at random to check for existence in the Google Maps Database

PROCESS STEP ►

DESCRIPTION

Parcel data for Wake County was analyzed to infer congregation totals based on zoning type; each candidate dataset was then cross-referenced to assess scale of data (USA Institutions was one of two data layers that provided a comparable total for Wake County; however, it provided a much more accurate count statewide and was therefore chosen over the other candidate).
