

NC Portal Access to Wildlife Systems (PAWS) Survey End Points, March 2023 - NC Department of Transportation

File Geodatabase Feature Class

Tags

NCPAWS, PAWS, survey points, survey end points, Portal Access to Wildlife Systems, NCWRC PAWS, Transportation, NRTR, NCDOT, Environment, Location, North Carolina, ATLAS

Summary

This dataset was originally created in July 2019 and updated in January 2023 as part of the Project ATLAS initiative at NCDOT to support the Environmental Analysis Unit (EAU) with project delivery in the development phase. The NC Portal Access to Wildlife Systems (PAWS) dataset is used by the North Carolina Wildlife Resources Commission (NCWRC) to record and track wildlife occurrences in North Carolina. This dataset contains the survey end points recorded by biologists.

This dataset supports the production of the Natural Resources Technical Report (NRTR). This dataset also contains information that may assist permitted wildlife biologists in preparing background information for field surveys, in order to address protected species for Threatened & Endangered Species Survey Reports, and/or Biological Assessments.

Description

The NC PAWS dataset is a statewide point layer depicting survey end point locations for surveys conducted by biologists throughout the survey season. The data is current as of September 2022.

Datasets developed under Project ATLAS do not replace any NRTR work for future projects and may not be used as a replacement for site visits / field surveys by licensed professionals and hence should be used only as a supporting platform for decision making. Use of this dataset for project scoping or screening is merely pre-decisional.

Credits

The Environmental Analysis Unit (EAU) Mitigation and Modeling Unit within NCDOT was tasked to create this dataset. This dataset supports the production of the Natural Resources Technical Report (NRTR). Quarterly maintenance of this dataset is handled by the EAU.

Support and maintenance of the enterprise spatial database where this data resides is handled by NCDIT's Transportation GIS Unit.

Use limitations

The North Carolina Department of Transportation shall not be held liable for any errors in this data. This includes errors of omission, commission, errors concerning the content of the data, and relative and positional accuracy of the data. This data cannot be construed to be a legal document. Primary sources from which this data was compiled must be consulted for verification of information contained in this data.

Datasets developed under Project ATLAS do not replace any NRTR work for future projects and may not be used as a replacement for site visits / field surveys by qualified professionals and hence should be used only as a supporting platform for decision making. Use of this dataset for project scoping or screening is merely pre-decisional.

Lineage ▶

LINEAGE STATEMENT

Survey end points were downloaded from the NCPAWS website. These points are entered by biologists after conducting a survey.

April 2020 Update:

New data points were added via a table export from the NCPAWS database.

January 2023 Update:

New fields were added in this update:

UniqID

QCMethod
PermitNumber
Individual Data Entered
Individual Number
Individual Comment
Height
TagNumber

PROCESS STEP ▶

DESCRIPTION

Excel tables were downloaded from www.ncpaws.org. XY Event Layers were created in ArcMap based on the Latitude and Longitude fields, along with the Datum field. Separate layers were created for each datum within the dataset. Records missing the Datum attribute were assumed to be in WGS84. Separate event layers were also created using the End Latitude and End Longitude fields, which correspond to the survey end locations. The event layers were merged into the NCPAWS and NCPAWS_survey_ends feature classes. Records missing coordinate information were removed.
