Summary

This dataset was originally created in December 2019 as part of the Project ATLAS initiative at NCDOT to support the Environmental Analysis Unit (EAU) with project delivery in the development phase.

This dataset includes a set of point features representing select government buildings, medical centers, places of worship, pre-primary, primary, and secondary schools and sports venues in the state of North Carolina.

Selected government buildings include city and town halls, county courthouses, and US federal district courts. The layer does not contain all government owned facilities.

Medical centers shall be described as any facility, private or public, that provides licensed professional medical care. This may include but is not limited to: hospitals, urgent care clinics, general practice or specialty clinics, orthopedic or other physical therapy or rehabilitation centers, mental health and addiction treatment centers, assisted living centers, hospice homes, centers for alternative medicine, chiropractic centers, nursing homes, dialysis centers, and imaging and radiology centers. There is not guarantee that all centers in this dataset provide licensed professional medical care or that this is an exhaustive list of all medical centers in North Carolina. To verify possible locations of any additional medical centers that meet this description, research should be pursued within any study area of interest.

Places of worship includes any facility that is used for religious or spiritual worship or study. The dataset may include worship centers that also function as a primary or secondary educational institution, but the dataset is not intended to include institutions that function solely as an educational institution or any faith-based organization that does not function as a place of worship or study. This may not be an exhaustive list of all places of worship in the state of North Carolina under the definition described. To verify possible locations of any additional places of worship that meet this description, research should be pursued within any study area of interest.

Included in this dataset are public and non-public schools ranging from pre-kindergarten or nursery school programs to high school. Private tutoring centers are not included. This may not be an exhaustive list of all pre-kindergarten-grade 12 schools in the state of North Carolina under the definition described. To verify possible locations of any additional schools that meet this description, research should be pursued within any study area of interest.

Selected sports venues included in this dataset include facilities where spectator sporting events occur. Spectator sports facilities defined, for the purpose of this dataset, as non-collegiate facilities with seating that exceeds approximately 2000 in number. This may include indoor or outdoor facilities with seating of this quantity, such as racing event facilities. This dataset may not be an exhaustive list of all sports venues in the state of North Carolina under the definition described. To verify possible location of any additional sports venues that meet this description, research and consultation with local agencies should be pursued within any study area of interest.

The Places of Interest POI points layer was created to be used in the NCDOT SPOT 6.0 process in Summer 2019, supporting identifying pedestrian destinations for the consideration of pedestrian or bicycle accommodations or improvement.

Description

The Places of Interest points layer is a statewide point layer depicting select government buildings, medical centers, places of worship, schools and sports venues throughout the state of North Carolina.

Datasets developed under Project ATLAS do not replace any Environmental Analysis Unit (EAU) field work for future projects and may not be used as a replacement for site visits / field surveys by licensed professionals and hence should be used only as a supporting platform for decision making. Use of this dataset for project scoping or screening is merely pre-decisional.

Credits

The Environmental Analysis Unit (EAU) within NCDOT was tasked to create this dataset.

Annual maintenance of this dataset is handled by the Environmental Analysis Unit (EAU). Support and maintenance of the enterprise spatial database where this data resides is handled by NCDIT's Transportation GIS Unit.

Use limitations

The North Carolina Department of Transportation shall not be held liable for any errors in this data. This includes errors of omission, commission, errors concerning the content of the data, and relative and positional accuracy of the data. This data cannot be construed to be a legal document. Primary sources from which this data was compiled must be consulted for verification of information contained in this data.

Datasets developed under Project ATLAS do not replace any field work for future projects and may not be used as a replacement for site visits / field surveys by licensed professionals and hence should be used only as a supporting platform for decision making. Use of this dataset for project scoping or screening is merely pre-decisional.

LINEAGE STATEMENT

VHB developed the point layer of government building locations using a list of addresses provided by NCDOT's Division of Bicycle and Pedestrian Transportation via the North Carolina League of Municipalities. A selection of government building types was made from this list and the addresses provided were geocoded to create a final point layer.

VHB developed the point layer of medical center locations using data provided by NCDOT's SPOT 6.0 working group with the NCDOT Division of Bicycle and Pedestrian Transportation. The dataset was distilled by VHB to identify and remove any features that may not meet the parameters of medical centers as described.

VHB developed the point layer of places of worship locations using data provided by NCDOT's SPOT 6.0 working group with the NCDOT Division of Bicycle and Pedestrian Transportation. The dataset was distilled by VHB to identify and remove any features that may not meet the parameters of places of worship as described.

VHB developed the point layer of school locations using data provided by NCDOT's SPOT 6.0 working group with the NCDOT Division of Bicycle and Pedestrian Transportation. The dataset was distilled by VHB to identify and remove any features that may not meet the parameters of schools as described.

VHB developed the point layer of sports venue locations using a combination of online research and aerial orthoimagery (Wikipedia, NC OneMap). A list of sports venues was generated, and the status of operations and precise location of the venues was verified. This list of locations was used to digitize the final output layer of sports venues in the state.
