Summary

This dataset was originally created in December 2019 as part of the Project ATLAS initiative at NCDOT to support the Environmental Analysis Unit (EAU) with project delivery in the development phase.

This dataset includes a set of polygon features representing parks owned by federal, state, and local government agencies throughout the state of North Carolina.

This dataset also includes a set of polygon features representing historic sites and college and university campuses throughout the state of North Carolina.

The dataset contains boundaries of national, state, and local parks, forests, and select natural areas that are accessible for public use. The dataset does not include easements of for lands protected for conservation purposes only such as registered heritage areas, designated nature preserves, or private conservation lands. The property boundaries in this file were acquired from a wide variety of sources, and in some cases their boundaries are approximate (NCHDE). Due to limitations of data available, the dataset is not a complete inventory of local parks in communities of North Carolina. Consultation with local agencies should be made in identifying parks at the municipal and county government level.

The layer contains polygon boundaries of historic districts and other sites designated by local ordinance in those municipalities and counties that have established historic preservation commissions as well as sites that are listed on the National Register of Historic Places, study list entries for potential nomination to the National Register, and sites that are determined eligible. (NCHPO)

The layer contains parcel boundaries of college and university property determined to be on-campus. On-campus properties are those determined to contain academic, college/university owned student housing, or other student activity facilities. These properties can be either contiguous or non-contiguous. Properties not included may be sports, recreational, or agricultural properties not contiguous with on-campus properties. This dataset supports identifying pedestrian destinations for the consideration of pedestrian or bicycle accommodations or improvements and may not contain all property following the defined parameters of on-campus properties of colleges and universities in North Carolina. The Colleges and Universities dataset is composed of not-for-profit institutions that grant First Professional, Associate, Bachelors, Masters, or Doctoral degrees.

The Places of Interest POI polygon layer was created to be used in the NCDOT SPOT 6.0 process in Summer 2019, supporting identifying pedestrian destinations for the consideration of pedestrian or bicycle accommodations or improvement.

Description

The Places of Interest polygon layer is a statewide polygon layer depicting a set of polygon features representing parks, historic places and college and university campuses throughout the state of North Carolina.

Datasets developed under Project ATLAS do not replace any Environmental Analysis Unit (EAU) field work for future projects and may not be used as a replacement for site visits / field surveys by licensed professionals and hence should be used only as a supporting platform for decision making. Use of this dataset for project scoping or screening is merely pre-decisional.

Credits

The Environmental Analysis Unit (EAU) within NCDOT was tasked to create this dataset.

Annual maintenance of this dataset is handled by the Environmental Analysis Unit (EAU). Support and maintenance of the enterprise spatial database where this data resides is handled by NCDOT's Transportation GIS Unit.

Use limitations

The North Carolina Department of Transportation shall not be held liable for any errors in this data. This includes errors of omission, commission, errors concerning the content of the data, and relative and positional accuracy of the data. This data cannot be construed to be a legal document. Primary sources from which this data was compiled must be consulted for verification of information contained in this data.

Datasets developed under Project ATLAS do not replace any field work for future projects and may not be used as a replacement for site visits / field surveys by licensed professionals and hence should be used only as a supporting platform for decision making. Use of this dataset for project scoping or screening is merely pre-decisional.

Lineage ►

LINEAGE STATEMENT

VHB obtained the dataset from the North Carolina State Parks division with consultation from NC State Parks, a selection of publicly accessible features was identified from the source dataset. The source layer used to create this dataset was put together by the North Carolina Heritage Program using a variety of sources. Features designated for conservation purposes only were subsequently removed.

The Historic Sites dataset was developed using two source layers. Polygons from local district boundaries and those from the National Register (registered, study list, and determined eligible sites) were merged to create the final layer.

The Universities dataset was developed using two source layers. A point layer of colleges and universities was used to identify locations of post-secondary institutions of interest. This layer was spatially joined with a polygon layer of statewide parcels in North Carolina. The statewide parcel dataset available from NC OneMap uses the NC Parcels Transformer which translates parcel data from all 100 counties and the Eastern Band of Cherokee Indians into a standardized format. (NC OneMap). Once a polygon layer of college and universities of interest was created, aerial orthoimagery was used to support the identification of additional parcels associated with the selected colleges and universities based on the determination parameters of on-campus as previously defined. College and university owned parcels meeting the parameters of on-campus were copied from the parcels source layer into the final Colleges_Universities layer.

PROCESS STEP ► DESCRIPTION

Geodatabase was forwarded on to the GIS Unit for publishing as part of data for project ATLAS.
