

Roseate Tern Potential Habitat, November 2023 - NC Department of Transportation

File Geodatabase Feature Class

Tags

Roseate tern, *Sterna dougallii dougallii*, bird, threatened, GIS-based model, expert model, Transportation, NRTR, NCDOT, Environment, Location, North Carolina, ATLAS

Summary

This dataset was originally created in July 2023 as part of the Project ATLAS initiative at NCDOT to support the Environmental Analysis Unit (EAU) Mitigation and Modeling Unit with project delivery in the development phase.

This model identifies year-round potential suitable habitat for Roseate tern. Model output is binary, and includes the USFWS species range, excluding historic counties. The species model range is split between "High" and "Low" potential habitat. "High potential habitat" represents GIS based layer areas deemed suitable habitat, and "Low potential habitat" representing areas identified as areas deemed low quality or non-habitat.

The Optimal survey window for Roseate tern is: June to August

This dataset supports the production of the Natural Resources Technical Report (NRTR). This dataset also contains information that may assist biologists in preparing background information for field surveys, in order to address protected species for Threatened & Endangered Species Survey Reports, and/or Biological Assessments.

Description

The Roseate tern Potential Habitat dataset is a polygon layer depicting high and low potential habitat locations for Roseate tern in NC counties that have a USFWS "current" status listing.

In North Carolina, the Roseate tern (*Sterna dougallii dougallii*) is most likely to be seen on a barrier island as it passes through the area to and from northern breeding grounds. March through May and August through October are the most likely times to see these birds. Although sight records of this species exist for June, July, and August, these are likely non-breeding males. Only one nesting record for this species has been documented for the state within the past twenty years; however, if this species expands its range, it is likely to choose coastal areas of the state for nesting. The Roseate tern nests on isolated, less disturbed coastal islands in areas characterized by sandy, rocky, or clayey substrates with either sparse or thick vegetation. Eggs are usually laid such that grasses or overhanging objects provide shelter. They may also nest in marshes, but it is an uncommon occurrence.

Additional Species Information

NHP records used at time of model were from January 2018 and checked in June 2022. There are 2 NHP EOs for roseate tern, with both records being historic.

County Information

- NHP listed counties: Carteret, Dare
- FWS listed counties as 'current': Brunswick, Carteret, Currituck, Dare, Hyde, New Hanover, Onslow, Pender

- Additions proposed by reviewers: NAr more information please click here <https://xfer.services.ncdot.gov/gisdot/Metadata/Atlas/TechDocs/>

Datasets developed under Project ATLAS do not replace any NRTR work for future projects and may not be used as a replacement for site visits / field surveys by qualified professionals and hence should be used only as a supporting platform for decision making. Use of this dataset for project scoping or screening is merely pre-decisional.

Credits

The Environmental Analysis Unit (EAU) Mitigation and Modeling Unit within NCDOT was tasked to create this dataset. This dataset supports the production of the Natural Resources Technical Report (NRTR). Annual maintenance of this dataset is handled by the EAU.

Support and maintenance of the enterprise spatial database where this data resides is handled by NCDIT's Transportation GIS Unit.

Use limitations

The North Carolina Department of Transportation shall not be held liable for any errors in this data. This includes errors of omission, commission, errors concerning the content of the data, and relative and positional accuracy of the data. This data cannot be construed to be a legal document. Primary sources from which this data was compiled must be consulted for verification of information contained in this data.

Datasets developed under Project ATLAS do not replace any NRTR work for future projects and may not be used as a replacement for site visits / field surveys by qualified professionals and hence should be used only as a supporting platform for decision making. Use of this dataset for project scoping or screening is merely pre-decisional.

DATA QUALITY REPORT - QUANTITATIVE ATTRIBUTE ACCURACY ▶

MEASURE DESCRIPTION

- ArcGIS Online (AGOL) Review

- o A model prediction file was shared with select reviewers on ArcGIS Online. Points were placed within the USFWS potential habitat as well as the model potential habitat to solicit feedback. Reviewers could place additional comments for consideration by modeler.
- o AGOL review was completed in May 2019 on draft version of this model

- Independent Data Review

- o Describe data sources –natural heritage element occurrence data, open water data, NLCD land cover and DCM shorelines (2009 and 2016).
- o Describe methods – Current aerial imagery was used to determine likelihood of habitat.

- Reviewers provided a complete and balanced review. Flags of non-habitat areas were primarily focused on areas where the landcover data or the open water data did not match what was viewable on the aerial photography.
- Reviewers for the most part agreed with the potential habitat. Modelers commented that areas of non-habitat occasionally were included in the model and should be removed. Examples of non-habitat observed by reviewers: maritime forest, forested uplands, marshes, canals, ditches, developed land, and inland waterbodies not connected to the estuary.

Lineage ►

LINEAGE STATEMENT

ArcGIS Model Builder version 10.4.1 was used to build a model .

Layer 1

- Layer name: CountyBoundaryShoreline
- Layer description:
 - o Select Water and roseate tern counties from County Boundary shapefile.
- Layer selection justification:
 - o Layer is used for county boundaries and shoreline area.
- "Habitat" versus "Nonhabitat" designations:
 - o Layer is used to delineate counties with roseate tern presence and is not used for habitat determinations. The layer was also used to create an area of low potential habitat within the county boundary but outside of the high potential habitat area.

Layer 2

- Layer name: dcm_oceanfront_shorelines
- Layer description:

- o Division of Coastal Management shoreline data from 2009 and 2016. This layer was processed in a preliminary model included in the GDB entitled "Prelim_DCMSshoreline_RoseateTern" to be used in the model as a merged and dissolved feature.
 - Layer selection justification:
 - o Data layer was incorporated into the model with 2009 and 2016 shorelines (to ensure complete coverage of coast) buffered 4 miles in order to ensure minimum coverage of 4 miles inland across the entire NC coast.
 - "Habitat" versus "Nonhabitat" designations:
 - o Area within buffer is most likely potential habitat, but other layers were used to refine the model beyond this 4-mile buffer.

Layer 3

- Layer name: nheo_tier2
- Layer description:
 - o Tier 2 data acquired from NC Natural Heritage Program
- Layer selection justification:
 - o Data layer was incorporated into model with any roseate tern records selected and included in final merged output file.

Layer 4

- Layer name: NLCD Landcover Data 2019
- Layer description:
 - o NLCD 2019 landcover data.
- Layer selection justification:
 - o The NLCD 2019 data was used to reduce areas of nonhabitat such as forested areas and medium to highly developed areas.
- "Habitat" versus "Nonhabitat" designations:
 - o Nonhabitat or low potential habitat designations used for this model – deciduous forests, developed – high intensity, emergent herbaceous wetlands, evergreen forest, mixed forest, and woody wetlands.
 - o Habitat designations used for this model - open water, developed – low intensity, developed – medium intensity, barren land, shrub/scrub, herbaceous, hay/pasture, cultivated crops. Note that these habitats were not excluded and used in the model, but accuracy for these types varied widely.

LIMITATIONS OF USE

The North Carolina Department of Transportation shall not be held liable for any errors in this metadata. This includes errors of omission, commission, errors concerning the content of the data, and relative and positional accuracy of the data. This data cannot be construed to be a legal document. Primary sources from which this data was compiled must be consulted for verification of information contained in this data. Datasets developed under Project ATLAS do not replace any NRTR work for future projects and may not be used as a replacement for site visits / field surveys by qualified professionals and hence should be used only as a supporting platform for decision making. Use of this dataset for project scoping or screening is merely pre-decisional.

CONSTRAINTS
