Strategic Transportation Corridor, STC, Transportation Planning Division, TPD, Corridor Alignments, Transportation, NCDOT, biota, Environment, Location, North Carolina, ATLAS

Summary

The Strategic Transportation Corridor (STC) dataset was originally created in August 2021 and are comprised of a network of major transportation facilities and services that are responsible for moving high volumes of people and freight across regions of the state and that must function at high levels of service in order to provide for the State's economic well-being.

The STC is meant to support ATLAS in the creation of metropolitan transportation plans (MTP) (federally backed, fiscally constrained) which provides a project look at vulnerabilities and shortfalls in urbanized areas and comprehensive transportation plans (CTP) (non- fiscally constrained) which provides a project (high-level) look at vulnerabilities and shortfalls in urbanized areas and rural areas. MTPs and CTPs are viewed from a multimodal perspective. Long range transportation plans (IRTP) – provides a project look at vulnerabilities and shortfalls.

Description

The Strategic Transportation Corridor (STC) layer is a polyline layer comprised of a network of major transportation facilities and services that are responsible for moving high volumes of people and freight across regions of the state and that must function at high levels of service in order to provide for the State's economic well-being.

In mid-2013, NCDOT began to update its Strategic Highway Corridors (SHC) Policy, which 10 years earlier had identified 55 highway corridors across the state deemed to be of high priority in achieving state development goals. NCDOT also needed to update the planning tool known as the NC Multimodal Investment Network which stratified elements of the state's multimodal transportation system into statewide, regional, and sub-regional tiers. The result is the North Carolina Transportation Network (NCTN), and the Strategic Transportation Corridors (STC) Policy and corridor network.

The STC identify a network of critical multimodal transportation corridors considered the backbone of the state's transportation system. These 25 corridors move most of our freight and people, link critical centers of economic activity to international air and sea ports, and support interstate commerce. They must operate well to help North Carolina attract new businesses, grow jobs and catalyze economic development.

The STC Policy and map were presented to the N.C. Board of Transportation's (BOT) Economic Development and Intergovernmental Relations Committee. The committee recommended the full board consider the policy and map as presented. The STC Policy and map was presented to the full BOT at its regular February 2015 meeting, and the BOT adopted them at its meeting on March 4, 2015.

Datasets developed under Project ATLAS do not replace any NRTR work for future projects and may not be used as a replacement for site visits / field surveys by licensed professionals and hence should be used only as a supporting platform for decision making. Use of this dataset for project scoping or screening is merely pre-decisional.

Credits
The Environmental Analysis Unit (EAU) Mitigation and Modeling Unit within NCDOT was tasked to create this dataset. This dataset supports the production of the Natural Resources Technical Report (NRTR). Quarterly maintenance of this dataset is handled by the EAU.

Support and maintenance of the enterprise spatial database where this data resides is handled by NCDIT's Transportation GIS Unit.

Use limitations
The North Carolina Department of Transportation shall not be held liable for any errors in this data. This includes errors of omission, commission, errors concerning the content of the data, and relative and positional accuracy of the data. This data cannot be construed to be a legal document. Primary sources from which this data was compiled must be consulted for verification of information contained in this data.

Datasets developed under Project ATLAS do not replace any NRTR work for future projects and may not be used as a replacement for site visits / field surveys by qualified professionals and hence should be used only as a supporting platform for decision making. Use of this dataset for project scoping or screening is merely pre-decisional.

CLASSIFICATION SYSTEM   None

LIMITATIONS OF USE
The North Carolina Department of Transportation shall not be held liable for any errors in this metadata. This includes errors of omission, commission, errors concerning the content of the data, and relative and positional accuracy of the data. This data cannot be construed to be a legal document. Primary sources from which this data was compiled must be consulted for verification of information contained in this data. Datasets developed under Project ATLAS do not replace any NRTR work for future projects and may not be used as a replacement for site visits / field surveys by qualified professionals and hence should be used only as a supporting platform for decision making. Use of this dataset for project scoping or screening is merely pre-decisional.
