

NC Milepost Zero Marker for Routes with Hatching at 0.01 Mile Intervals, 3rd Quarter 2024 - NC Department of Transportation

File Geodatabase Feature Class

Tags

Roads, North Carolina, NCDOT, State Highway Network, Measure, Milepost Zero, Route Beginning Point, Hatch Interval, Milepost, Transportation, Highway, Routes, Location, Streets, Interstate, US Route, NC Route Secondary Route

Summary

This layer provides points representing the beginning point—milepost zero—for routes where hatch lines are generated that represent hundredth-mile intervals along the NCDOT Road Network. Each hatch line contains the hundredth-of-a-mile Milepost value from this beginning point of a route. The Route ID attribute value is also included.

Description

This data provides the display for zero milepost values along public roads, excluding non-system/local roads, in North Carolina where hatch lines have been generated along their length. This can accompany the hundredth-of-a-mile interval hatch lines data. The zero milepost points and hatch intervals are created off the NC Public Road Arcs publication product. NC Public Road Arcs is a route publication product derived using an internal procedure designed to generate reporting products from the Linear Referencing System (LRS).

NCDOT adopted the road centerline based LRS Network as its official Enterprise LRS, to which multiple road inventory attributes are referenced along measured routes throughout North Carolina. These routes are classified as either System or Non-System routes. System routes are routes within the state-maintained road network, and are comprised of Interstates, US Routes, NC Routes, Secondary Routes, Ramps, and Non-System Routes. Non-System routes are routes that are typically not maintained by NCDOT, but instead by a local agency (county, city or MPO/RPO). The local agency is the source for updating these Non-System routes in NCDOT's LRS. The route classification is recorded in the RteClass field in this data set; see field values and descriptions in the metadata Fields Section.

Credits

Use limitations

The North Carolina Department of Transportation shall not be held liable for any errors in this data. This includes errors of omission, commission, errors concerning the content of the data, and relative and positional accuracy of the data. This data cannot be construed to be a legal document. Primary sources from which this data was compiled must be consulted for verification of information contained in this data.

This data is produced as a derivative of a reporting product out of the NCDOT Linear Referencing System, and is intended for visualization and reference use only. This is representative data only and is not designed for participation in data analysis or modelling. Use of this data is not analogous to integration with or alignment to NCDOT's Linear Referencing System.

Lineage ▶

LINEAGE STATEMENT

This data is created using an automated process designed to generate feature classes with points representing the beginning milepost zero on the NCDOT Road Network of routes. The publication product NC Public Road Arcs is used as the input for the application to generate the beginning point (milepost zero) of a route. NC Public Road Arcs is a route publication product derived using an internal procedure designed to generate reporting products from the Linear Referencing System maintained by the Spatial Data Operations Group within the North Carolina Department of Information Technology-Transportation, GIS Unit.
