

Primary and Secondary Road Arcs, 1st Quarter 2015 - NC Department of Transportation

SDE Feature Class

Tags

Secondary, Transportation, Highways, SR, Major Roads, North Carolina, Division, Primary, NC, Centerline, County, Streets, US, Interstate, State maintained roads, Roads

Summary

For visual representation of the roads maintained by the North Carolina Department of Transportation. The data are current through January 2015 for roads changed by NCDOT Petitions and Municipal Agreements.

Description

An arc layer for visual representation of the state road system where each arc/record is split at each state maintained road intersection. This is a digital file of the North Carolina Department of Transportation's Linear Referencing System that represents the routes and attributes of the NCDOT state road system. The state road system is comprised of Interstate, US, NC, Secondary Routes and Ramps. This layer also includes some non-state maintained and projected roads that are required for reporting purposes. This layer also contains some additional routes to meet the Federal Highway Administration's (FHWA) data requirements for the Highway Performance Monitoring System (HPMS). HPMS is a national level highway information system that includes data on the extent, condition, performance, use, and operating characteristics of the Nation's highways. States are required to submit an HPMS report to FHWA annually. The additional routes include: Projected Routes - generalized locations of projected routes that will become part of the National Highway System (NHS) when they are built. Non-state maintained roads - generalized locations of roads that are owned by local, state and federal entities. Only non-state maintained roads that are eligible for federal aid are included. Currently there is no connectivity enforced between the state-maintained roads and the non-state maintained roads. Data quality is tracked using the revision document fields (REVDOC_TYP_CD and REVDOC_NUM). Legacy data are coded as not verified. These data are updated on an ongoing basis to improve data quality and the revision document fields are updated accordingly. As new data are added the geometry and spatial location are verified with the most current information available.

Credits

There are no credits for this item.

Use limitations

The North Carolina Department of Transportation shall not be held liable for any errors in this data. This includes errors of omission, commission, errors concerning the content of the data, and relative and positional accuracy of the data. This data cannot be construed to be a legal document. Primary sources from which this data was compiled must be consulted for verification of information contained in this data.

FIELD Beg_Intersect ►

* ALIAS Beg_Intersect

* DATA TYPE String

* WIDTH 255

* PRECISION 0

* SCALE 0

FIELD DESCRIPTION

Begin Intersect Code is used to identify the route that crosses the end node. It uses the eight digit code for the route number or at the county line it will have the letter "C" followed by the county code for the next county.

DESCRIPTION SOURCE

NCDOT GIS

LIST OF VALUES

VALUE PSEUDO

DESCRIPTION Depicts a situation where there is no intersecting route or county boundary. The primary cause for this value is past route intersections; which have now been physically altered or have dropped off-system. Looped segments will also have PSEUDO nodes split at the mid-section of the loop.

ENUMERATED DOMAIN VALUE DEFINITION SOURCE NCDOT GIS

VALUE C00000##

DESCRIPTION Depicts a situation where the segment crosses a county boundary. Eight digit value starting with the character "C" and ending with the NCDOT county # (0-99). See MAINT_CNTY_CD attribute description in RdChar metadata for county # values.

ENUMERATED DOMAIN VALUE DEFINITION SOURCE NCDOT GIS

VALUE Route number

DESCRIPTION See ROUTE_ID attribute description

ENUMERATED DOMAIN VALUE DEFINITION SOURCE NCDOT GIS

VALUE DEAD-END

DESCRIPTION Depicts a situation where the state maintained service ends for a route segment. This could be a physical end to the pavement; or an end of state maintenance and the beginning of city/federal/local maintenance.

ENUMERATED DOMAIN VALUE DEFINITION SOURCE NCDOT GIS

VALUE X-CROSS

DESCRIPTION Depicts a situation where the primary route crosses back over itself. An example would be a loop segment.

FIELD End_Intersect ►

* ALIAS End_Intersect

* DATA TYPE String

* WIDTH 255

* PRECISION 0

* SCALE 0

FIELD DESCRIPTION

End Intersect Code is used to identify the route that crosses the end node. It uses the eight digit code for the route number or at the county line it will have the letter "C" followed by the county code for the next county.

DESCRIPTION SOURCE

NCDOT GIS

LIST OF VALUES

VALUE C00000##

DESCRIPTION Depicts a situation where the segment crosses a county boundary. Eight digit value starting with the character "C" and ending with the NCDOT county # (0-99). See MAINT_CNTY_CD attribute description in RdChar metadata for county # values.

ENUMERATED DOMAIN VALUE DEFINITION SOURCE NCDOT GIS

VALUE DEAD-END

DESCRIPTION Depicts a situation where the state maintained service ends for a route segment. This could be a physical end to the pavement; or an end of state maintenance and the beginning of city/federal/local maintenance.

ENUMERATED DOMAIN VALUE DEFINITION SOURCE NCDOT GIS

VALUE PSEUDO

DESCRIPTION Depicts a situation where there is no intersecting route or county boundary. The primary cause for this value is past route intersections; which have now been physically altered or have dropped off-system. Looped segments will also have PSEUDO nodes split at the mid-section of the loop.

ENUMERATED DOMAIN VALUE DEFINITION SOURCE NCDOT GIS

VALUE Route number

DESCRIPTION See ROUTE_ID attribute description

ENUMERATED DOMAIN VALUE DEFINITION SOURCE NCDOT GIS

VALUE X-CROSS

DESCRIPTION Depicts a situation where the primary route crosses back over itself. An example would be a loop segment.
