

# NC Milepost Hatching at 1 Mile Intervals, 1st Quarter 2026 - NC Department of Transportation

## Geodatabase Feature Class

**Tags** Roads, North Carolina, NCDOT, State Highway Network, Measure, Hatch Interval, Milepost, Transportation, Highway, Routes, Location, Streets, Interstate, US Route, NC Route Secondary Route

### Summary

This layer provides short hatch lines representing hundredth-mile intervals along NCDOT System routes. Each hatch line contains the hundredth-of-a-mile Milepost value from the beginning point of a route. Route ID and Route Class attribute values are also included.

### Description

This data provides the display for milepost values along public roads, excluding non-system/local roads, in North Carolina. Based on the data the hatch lines are 25 feet in length and positioned perpendicular to the road centerline. The hatch intervals are created off the NC Public Road Arcs publication product. NC Public Road Arcs is a route publication product derived using an internal procedure designed to generate reporting products from the Linear Referencing System (LRS).

NCDOT adopted the road centerline based LRS Network as its official Enterprise LRS, to which multiple road inventory attributes are referenced along measured routes throughout North Carolina. These routes are classified as either System or Non-System routes. System routes are routes within the state-maintained road network, and are comprised of Interstates, US Routes, NC Routes, Secondary Routes, Ramps, and Non-System Routes. Non-System routes are routes that are typically not maintained by NCDOT, but instead by a local agency (county, city or MPO/RPO). The local agency is the source for updating these Non-System routes in NCDOT's LRS. The route classification is recorded in the RteClass field in this data set; see field values and descriptions in the metadata Fields Section.

### Credits

NC Department of Information Technology-Transportation (NCDIT-T), GIS Unit, Spatial Data Management Group and Geospatial Services Group - Product creation; NCDIT-T, GIS Unit, Spatial Data Operations Group – System geometry, mileage.

### Use limitations

The North Carolina Department of Transportation shall not be held liable for any errors in this data. This includes errors of omission, commission, errors concerning the content of the data, and relative and positional accuracy of the data. This data cannot be construed to be a legal document. Primary sources from which this data was compiled must be consulted for verification of information contained in this data.

This data is produced as a derivative of a reporting product out of the NCDOT Linear Referencing System, and is intended for visualization and reference use only. This is representative data only and is not designed for participation in data analysis or modelling. Use of this data is not analogous to integration with or alignment to NCDOT's Linear

Referencing System.

## Data Quality

### Scope of quality information

**Resource level** dataset

### Data quality report - Completeness commission

#### Data quality measure reference

##### Measure description

After processing, the dataset is checked for drawing display and number of records and file sizes compared with source materials.

#### Conformance test results

**Test passed** Yes

##### Result explanation

Pass.

#### Product specification

**Title** NCDOT Geospatial Data Specifications  
**Creation date** 2026-04-13 00:00:00  
**Publication date** 2026-05-04 00:00:00

### Data quality report - Conceptual consistency

#### Data quality measure reference

##### Measure description

This dataset is converted to file geodatabase (FGDB) format using tools in ArcGIS. The geometry is checked, and if needed repaired.

#### Conformance test results

**Test passed** Yes

##### Result explanation

Pass.

#### Product specification

**Title** NCDOT Geospatial Data Specifications  
**Creation date** 2026-04-13 00:00:00  
**Publication date** 2026-05-04 00:00:00

### Data quality report - Quantitative attribute accuracy

#### Data quality measure reference

##### Measure description

The source data was checked using standard review procedures. Attributes were checked by using visual inspection as well as automated verification routines. Geometry checks were conducted using Esri's Data Reviewer tool.

## Conformance test results

**Test passed** Yes

### Result explanation

Pass

## Product specification

**Title** NCDOT Geospatial Data Specifications

**Creation date** 2026-04-13 00:00:00

**Publication date** 2026-05-04 00:00:00

## Lineage

### Lineage statement

This data is created using an automated process designed to generate feature classes with short hatch lines at specific milepost intervals along routes. The publication product NC Public Road Arcs is used as the input for the application to generate hatchmarks at specific milepost intervals from the beginning point (milepost zero) of a route. NC Public Road Arcs is a route publication product derived using an internal procedure designed to generate reporting products from the Linear Referencing System maintained by the Spatial Data Operations Group within the North Carolina Department of Information Technology- Transportation, GIS Unit.

## Process step
