

NC Proposed Utility Gas Annotation, Continuous Capture – NC Department of Transportation Geodatabase Feature Class

Tags Annotation, North Carolina, NCDOT, Transportation, Right of Way, Highway, Transportation Planning, Location, Utilities, Road, ROW.

Summary

This feature class contains annotation of proposed gas utilities which NCDOT acquisition, in part, may be necessary for road construction or improvement. Attributes containing NCDOT Project and Parcel ID are included. These data support the NCDOT Right Of Way Management System which allows for the continuous capture of right of way data. The data entered are the latest available to the NCDOT Right Of Way Branch, but data currency may vary across the system.

Description

The Right of Way Branch of NCDOT is responsible for the acquisition of all necessary lands and rights of way used for construction and improvements of all highways which are part of the State Highway System. This includes roads on both the primary (interstate, U.S., and N.C. routes) and secondary (SR routes) systems. Purchasing land for other public modes of transportation is also required for expansion and to accommodate increased demand.

Multiple facets make up the Right of Way business process from early NCDOT project development to appraisals and land purchases. NCDOT's "Understanding the Right of Way Process" document provides more information here:

<https://connect.ncdot.gov/business/ROW/ROWManualsandPublications/Right-of-Way-Brochure-Single%20Page%20layout.pdf>

The Right of Way Management System (ROWMS) is a web-based application that captures Right of Way (ROW) information and documents, provides workflow and reporting capabilities, and interfaces with internal systems. ROWMS supports NC legislative mandates requiring Right of Way to have a role-based, data management system used by all projects.

A major benefit ROWMS provides is a 25% workflow cycle time reduction. It also facilitates process standardization, cross-department integration, collaboration across the organization, a detailed audit trail, and contractor integration. ROWMS integrates systems such as SAP (Vendors, Invoices, POs, Asset Management, etc.), SharePoint (public documents and deeds), DocuSign (electronic signatures, eNotary), and GIS.

The GIS Unit of the North Carolina Department of Information Technology-Transportation (NCDIT-T) has developed a process to convert the Right of Way Unit's original DGN/CAD files into a GIS format, that can then be managed and disseminated to meet the ROWMS project needs. These are adjacent and nearby critical features such as existing roads, buildings, utilities, and property, affected or impacted in some way due to NCDOT's state highway system construction or improvement projects. Proposed features for ROW acquisition, proposed roads and related features are also included. This ROW data can be viewed overlaying maps in the application. The GIS capability of ROWMS enables management and dissemination of Right of Way-based spatial data.

Credits

The North Carolina Department of Transportation, Division of Highways, Right of Way Unit.

Support and maintenance of the enterprise spatial database where this data resides is handled by the North Carolina Department of Information Technology-Transportation, GIS Unit.

Use limitations

The North Carolina Department of Transportation shall not be held liable for any errors in this data. This includes errors of omission, commission, errors concerning the content of the data, and relative and positional accuracy of the data. This data cannot be construed to be a legal document. Primary sources from which this data was compiled must be consulted for verification of information contained in this data.

All Right of Way data is the sole property of NCDOT and any public purpose use is subject to approval and release by NCDOT. No data, whole or in part, shall be released, published, or shared without prior written approval by NCDOT. No information concerning the data shall be divulged to anyone outside the proper officials at NCDOT or the Federal Highway Administration. All Right of Way data is strictly confidential to NCDOT and its approved contractors.

Lineage

Lineage statement

This dataset was originally created by the North Carolina Department of Transportation, Right of Way Unit, to provide annotation of proposed gas utilities affected by proposed Right of Way acquisition in North Carolina. The data contained within this dataset is automatically loaded to the enterprise database environment through the data conversion process. Web mapping services are created with this data from the database. These services support the Right of Way Management System (ROWMS) online GIS data viewer which is utilized by the NCDOT's Right of Way Unit.

Process step

When the process occurred 2018-09-01 00:00:00

Description

The Right of Way data is originally created using MicroStation (CAD software). This data, known as Levels, exist as DGN format data files

Value Right

Description Text is horizontally aligned with the right position.

Enumerated domain value definition source Esri

Value Center

Description Text is horizontally aligned with the center position.

Enumerated domain value definition source Esri

Value Full

Description Text is horizontally aligned in full position.

Enumerated domain value definition source Esri

Field XOffset

Alias XOffset

Data type Double
Width 8
Precision 0
Scale 0

Field description

Default annotation feature class field. Value representing amount of left or right position shift of the text.

Description source

Esri

Description of values

Values vary.

Field YOffset

Alias YOffset
Data type Double
Width 8
Precision 0
Scale 0

Field description

Default annotation feature class field. Value representing amount of up or down position shift of the text.

Description source

Esri

Description of values

Values vary.

Field Angle

Alias Angle
Data type Double
Width 8
Precision 0
Scale 0

Field description

Default annotation feature class field. Text rotation angle (0 – 360).

Description source

Esri

Description of values

Values vary.

Field FontLeading

Alias FontLeading
Data type Double
Width 8
Precision 0
Scale 0

Field description

Default annotation feature class field. Value to adjust spacing between multiple lines of text.

Description source

Esri

Description of values

Values vary.

Field WordSpacing

Alias WordSpacing
Data type Double
Width 8
Precision 0
Scale 0

Field description

Default annotation feature class field. Value to adjust spacing between words.

Description source

Esri

Description of values

Values vary.

Field CharacterWidth

Alias CharacterWidth
Data type Double
Width 8
Precision 0
Scale 0

Field description

Default annotation feature class field. Value to adjust character width.

Description source

Esri

Description of values

Values vary.

Field CharacterSpacing

Alias CharacterSpacing

Data type Double

Width 8

Precision 0

Scale 0

Field description

Default annotation feature class field. Value to adjust the spacing between characters.

Description source

Esri

Description of values

Values vary.

Field FlipAngle

Alias FlipAngle

Data type Double

Width 8

Precision 0

Scale 0

Field description

Default annotation feature class field. Adjusts the angle at which point rotated text is flipped in place.

Description source

Esri

Description of values

Values vary.

Field Override

Alias Override

Data type Integer

Width 4

Precision 0

Scale 0

Field description

Default annotation feature class field. The Override field is not editable and is maintained by ArcGIS. When the override value is 0, the annotation feature is displayed using the SymbolID text symbol that it references and no display properties are stored in the record. When the override value is greater than 0, the annotation feature uses the SymbolID text symbol as a base display and applies the overridden properties to that symbol.

Description source

Esri

Description of values

Values vary.

Field Shape

Alias Shape

Data type Geometry

Width 0

Precision 0

Scale 0

Field description

Feature geometry.

Description source

Esri

Description of values

Coordinates defining the features.

Field IgdsClass

Alias IgdsClass

Data type Integer

Width 4

Precision 0

Scale 0

Field description

Field from original DGN format file. The element's class value. 0 = Primary.

Description source

NCDOT Right of Way Unit

Description of values

Numerical value.

Field IgdsFont

Alias IgdsFont

Data type Integer

Width 4

Precision 0

Scale 0

Field description

Field from original DGN format file. The IGDS font number for the text string.

Description source

NCDOT Right of Way Unit

Description of values

Values vary.

Field IgdsInsertionX

Alias IgdsInsertionX

Data type Double

Width 8

Precision 0

Scale 0

Field description

Field from original DGN format file. The x-axis location of the original insertion point for the text before the justification was applied.

Description source

NCDOT Right of Way Unit

Description of values

Values vary.

Field IgdsInsertionY

Alias IgdsInsertionY

Data type Double

Width 8

Precision 0

Scale 0

Field description

Field from original DGN format file. The y-axis location of the original insertion point for the text before the justification was applied.

Description source

NCDOT Right of Way Unit

Description of values

Values vary.

Field IgdsInsertionZ

Alias IgdsInsertionZ

Data type Double

Width 8

Precision 0

Scale 0

Field description

Field from original DGN format file. The z-axis location of the original insertion point for the text before the justification was applied.

Description source

NCDOT Right of Way Unit

Description of values

Values vary.

Field IgdsStyle

Alias IgdsStyle

Data type Integer

Width 4

Precision 0

Scale 0

Field description

Field from original DGN format file. The element's line style.

Description source

NCDOT Right of Way Unit

Description of values

Numerical value.

Field IgdsWeight

Alias IgdsWeight

Data type Integer

Width 4

Precision 0

Scale 0

Field description

Field from original DGN format file. The element's line weight.

Description source

NCDOT Right of Way Unit

Description of values

Numerical value.

Field IgdsColor

Alias IgdsColor
Data type Integer
Width 4
Precision 0
Scale 0

Field description

Field from original DGN format file. The element's color setting. This is the element's color index into the color table stored in the design file.

Description source

NCDOT Right of Way Unit

Description of values

Numerical value.

Field IgdsGraphicGroup

Alias IgdsGraphicGroup
Data type Integer
Width 4
Precision 0
Scale 0

Field description

Field from original DGN format file. The element's graphic group number.

Description source

NCDOT Right of Way Unit

Description of values

Numerical value.

Field IgdsLevel

Alias IgdsLevel
Data type Integer
Width 4
Precision 0
Scale 0

Field description

Field from original DGN format file, a level-based format. The IGDS (Interactive Graphics Design System – CAD format) level value of the feature.

Description source

NCDOT Right of Way Unit

Description of values

Numerical value.

Field LevelName

Alias LevelName

Data type String

Width 75

Precision 0

Scale 0

Field description

Field from original DGN format file, a level-based format. The name of the level from which the element originated. This closely matches the name of the feature class.

Description source

NCDOT Right of Way Unit

Description of values

Numerical value.

Field IgdsJustification

Alias IgdsJustification

Data type Integer

Width 4

Precision 0

Scale 0

Field description

Field from original DGN format file. The justification code for the text string. Text elements in a Design file are always stored using a lower left corner.

0 = Left/Top

1 = Left/Center

2 = Left/Bottom

3 = Left Margin/Top

4 = Left Margin/Center

5 = Left Margin/Bottom

6 = Center/Top

7 = Center/Center

8 = Center/Bottom

9 = Right Margin/Top

10 = Right Margin/Center

11 = Right Margin/Bottom

12 = Right/Top

13 = Right/Center

14 = Right/Bottom

Description source

NCDOT Right of Way Unit

Description of values

Values vary.

Field IgdsNodeNumber

Alias IgdsNodeNumber

Data type Integer

Width 4

Precision 0

Scale 0

Field description

Field from original DGN format file. The node number assigned to the text node. Text node features are point features, and only have a single coordinate. Usually, text nodes are used to group together lines of text into a single complex element.

Description source

NCDOT Right of Way Unit

Description of values

Values vary.

Field TextGroup

Alias TextGroup

Data type Integer

Width 4

Precision 0

Scale 0

Field description

Field from original DGN format file. Group assigned to multiple text strings.

Description source

NCDOT Right of Way Unit

Description of values

Values vary.

Field ProjectID

Alias ProjectID

Data type String

Width 75

Precision 0

Scale 0

Description source

NCDOT Right of Way Unit

Field description

Concatenation of the NCDOT TIP Project number and “_ROWGIS”.

Description of values

Alphanumeric values will vary.

Field GlobalID

Alias GlobalID

Data type GlobalID

Width 38

Precision 0

Scale 0

Description source

NCDOT Right of Way Unit

Field description

Uniquely identifies a feature or table row within a geodatabase and across geodatabases.

Description of values

Alphanumeric values will vary.

Field Shape_Length

Alias Shape_Length

Data type Double

Width 8

Precision 0

Scale 0

Field description

Length of feature in internal units.

Description source

Esri

Description of values

Positive real numbers that are automatically generated.

Field Shape_Area

Alias Shape_Area

Data type Double

Width 8

Precision 0

Scale 0

Field description

Area of feature in internal units squared.

Description source

Esri

Description of values

Positive real numbers that are automatically generated.
