Roadways, North Carolina, NC, Roads, Road Characteristics, Access Control, Functional Class, Streets, Centerline, Prioritization 7.0 (P7), Strategic Prioritization Office of Transportation (SPOT), North Carolina Department of Transportation (NCDOT)

Summary

A visual representation of access control and functional class characteristics of roadways.

Description

This feature class provides a visual representation of a subset of road characteristics for the state road system. Each arc/record is split where road characteristics change along a route. This is a digital file of the North Carolina Department of Transportation's road inventory database that represents the access control and functional class characteristic attributes of the NCDOT state road system. The state road system is comprised of functional classes that include Interstate, US, NC, Secondary Routes and ramps (see full list below). Additional routes are also included to meet the Federal Highway Administration's (FHWA) data requirements for the Highway Performance Monitoring System (HPMS). HPMS is a national level highway information system that includes data on the extent, condition, performance, use, and operating characteristics of the Nation's highways. States are required to submit a HPMS report to the FHWA annually. The additional routes include: Projected Routes - generalized locations of projected routes that will become part of the National Highway System (NHS) when they are built and Non-state maintained roads - generalized locations of roads that are owned by local, state and federal entities. Only non-state maintained roads that are eligible for federal aid are included. Currently there is no connectivity enforced between the state-maintained roads and the non-state maintained roads.

Functional Classifications :

1 Interstate

2 PA-FrwyExp Principal Arterial – Other Freeways and Expressways

3 PA-Other Principal Arterial – Other

4 Minor Arterial

5 Major Collector

6 Minor Collector

7 Local

For the purposes of the Strategic Planning Office of Transportation Prioritization 7.0 (P7) Project, various fields present in previous versions that are no longer needed were deleted from the attribute table. A new field was added which defines the access control value (a measure of control of through-movements of a roadway in relation to interchanges, intersections, driveways and medians). Values are defined as 1: Full Access Control, 2: Limited Access Control , 3: Partial or 4: No Access Control. Data for P7 was not updated after February 2023.

For further information about domains and fields used in SPOT see the SPOT P7 Domains document here:

https://xfer.services.ncdot.gov/gisdot/metadata/spot/NCDOT%20SPOT%20Prioritization%207%20Online%20Domain%20Reference.pdf

Use limitations
The North Carolina Department of Transportation shall not be held liable for any errors in this data. This includes errors of omission, commission, errors concerning the content of the data, and relative and positional accuracy of the data. This data cannot be construed to be a legal document. Primary sources from which this data was compiled must be consulted for verification of information contained in this data.

SPOT On!ine is the NC Department of Transportation's online project prioritization evaluation system. All data used for scoring and evaluating projects, including scores and preliminary point-in-time cost estimates either generated by the SPOT On!ine application or provided by the user, are only intended for use in the Department's Strategic Prioritization Process. All SPOT On!ine project data will be used for preliminary level planning, scoring, and evaluation purposes only, and must undergo further review prior to use in the Department's programming process. By entering SPOT On!ine, the user hereby acknowledges this statement.
