

There are 3 methods to add data to your map:

1. Search for Layers in AGOL:
 - 1a- Search by Keyword
 - 1b- Filter search by common layers used in SDV or all AGOL layers.
 - 1c- Filter for layers that contain data in the current map view
 - 1d- Filter by Layer Type
 - 1e- Sort by Relevance, Title, Owner, Rating, Views, or Date
 - 1f- Add selected layer to the map
 - 1g- Open the Layer Details Page
2. Add a web service from a URL:
 - 2a- Select the type of web service layer to be added
 - 2b- Type or paste the service URL
 - 2c- Click Add to bring the layer into your map
3. Add data from a File on your PC:
 - 3a- Select to auto-generalize your layer (set symbology, etc)
 - 3b- Drag and drop a Shapefile, CSV, KML, GPX, or GeoJSON File from your File Explorer.
 - 3c- Browse your PC for GIS layers
