

Spatial Data Viewer (SDV) User Guide – Identify Route/Milepost Tool

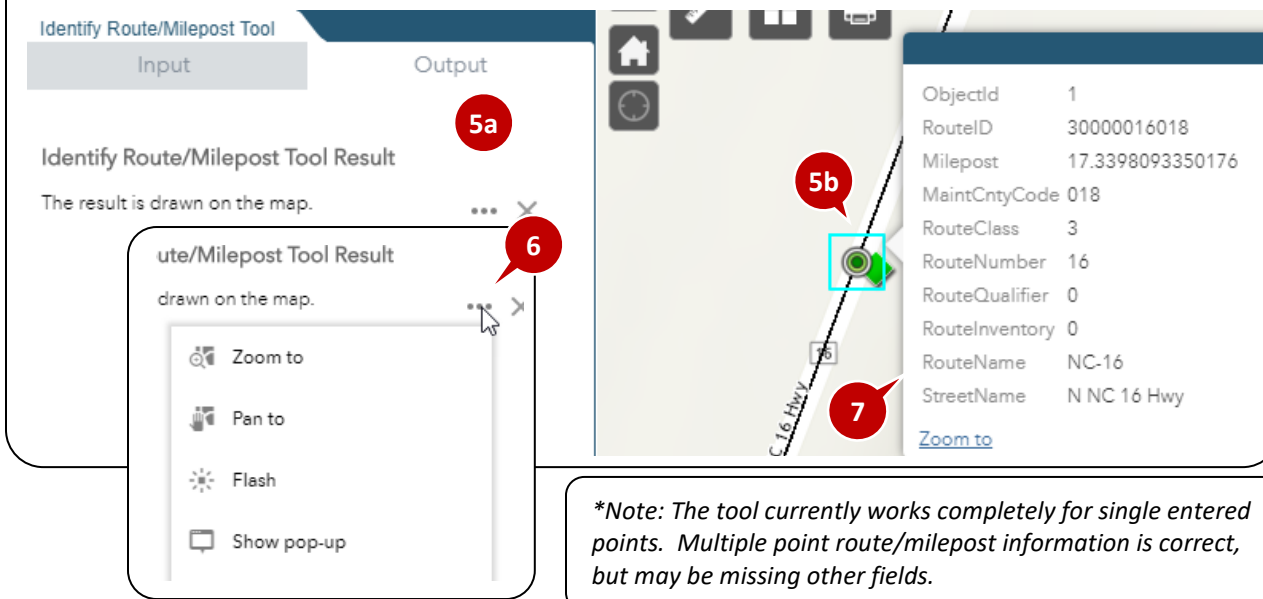

Using the Identify Route/Milepost Tool

1. Click on the **More** button to list additional application tools.
2. Click on **Identify Route/Milepost Tool** to open the tool panel.
3. Click on the Input Point button and add one or more* points to the map.
4. Click on Execute.

5. If the tool executes successfully, a point is placed on the map, and the “Output” tab is opened.

The results are accessible through the Layer List Tool, too.

6. Click on the 3 dots next to the result to view other options, such as zoom and export.
7. Click on the new dot to view the result details .

**Note: The tool currently works completely for single entered points. Multiple point route/milepost information is correct, but may be missing other fields.*
