

Spatial Data Viewer (SDV) User Guide – Layer List Tool

Using the Layer List

1. Click on the **Layer List** button to open the panel.
2. View the list of layers in your map. The list includes default layers and any layers you've added using other tools, such as **Add Data** or **Select**.

Note: Layers cannot be removed using the Layer List Tool. Layers can only be removed using the tool that added them. Default layers cannot be removed.
3. Click on a layer to expand the sub-layers and view the legend.
4. Click on the blue dots next to the layer to view available functions. Different options are available depending on the type of layer.
5. Use the Layer List search tool to find layers in your list.
6. Use the "Control All Layers" button to toggle all layers on/off or to expand/collapse all layers.
