

NCDOT Spatial Data Viewer (SDV) (v2) – Map Layers Tool

1. Click to open the Map Layers List
 - a. Click and drag to move and resize the pane
2. View the list of layers in your map. The list includes default layers and any layers you have added using other tools, such as Add Data or Select.
 - a. Note: Layers cannot be removed using the Layer List Tool. Layers can only be removed using the tool that added them. Default layers cannot be removed.
3. Click on a layer to expand the sub-layers
 - a. If the check box is checked and viewable at the current map scale, then the legend will appear below
 - b. Turn on/off the legend
4. Click on the ellipsis next to the layer to view available functions. Different options are available depending on the type of layer.
5. Use the Layer List search tool to find layers in your list.
