PROJECT COMMITMENTS

T.I.P. No. R-2248 G
I-485/ Charlotte Outer Loop
Paving of existing ramps at Oakdale Road (SR 2042) and
construction of roundabouts at ramp termini and at the intersection
of Oakdale Road and Mt Holly- Huntersville Road
Mecklenburg County
State Project No. 34410.1.S27

COMMITMENTS FROM PROJECT DEVELOPMENT AND DESIGN

Division 10 Construction Unit

Due to the project draining to an area designated as "Critical Area", this project will be subject to "NCDOT's Design Standards for Sensitive Waters."

North Carolina Department of Transportation
PROJECT ENVIRONMENTAL CONSULTATION FORM
I.D. NO R-2248G
March 4, 2014

I. GENERAL INFORMATION

a.	Consultation Phase:	Right of Way (Memo to File) Zahid Baloch, P.E Project Planning Engineer Project Development and Environmental Analysis Unit	
b.	Project Description	Section G, I-485 Interchange with SR 2042 (Oakdale Road) Ramp pavement and improvements to Oakdale Road and Mt. Holly-Huntersville Road Intersection, Charlotte, Mecklenburg County.	
c.	State Project: Federal Project:	34410.1.S27 N/A (This part of project is state funded)	
d.	Document Type:	Final Environmental Impact Statement (EIS)	01-29-1992 Date
		Record of Decision (ROD)	10-15-1992 Date

II. CONCLUSIONS

The above environmental document has been reevaluated as required by 23 CFR 771. It was determined that the current proposed action is essentially the same as the original proposed action. Proposed changes, if any, are noted below in Section III. It has been determined that anticipated social, economic, and environmental impacts were accurately described in the above referenced document(s) unless noted otherwise herein. Therefore, the original Administration Action remains valid.

A circumferential freeway (the Outer Loop or I-485) around the city of Charlotte first gained local government support in 1977 with the adoption of the Charlotte-Mecklenburg Thoroughfare Plan. To meet the requirements of the National Environmental Policy Act (NEPA), an Environmental Impact Statement (EIS) was prepared and the Final EIS was approved in January 1992. Since the completion of the Record of Decision (ROD) in October 1992, the design and construction of various segments have taken place. Construction on the final 5.1-mile section of I-485 (R-2248E) to complete the Outer Loop around Charlotte is being conducted through the design-build process. This final section runs from west of NC 115 to west of I-85.

In 2009, the ROD for this project was re-evaluated as required by the Code of Federal Regulations (CFR) Title 23, Part 771. The 2009 re-evaluation determined that the anticipated social, economic, and environmental impacts in the ROD were accurately described and the original Administration Action remained valid.

During the construction of this portion of I-485, it was requested by the City of Charlotte to delay the paving of Oakdale Road (SR 2042) interchange ramps to discourage the explosive out of control growth, resulting in congested interchange and eventually deteriorating freeway operations. Now that the City of Charlotte has better control on growth patterns, the project is ready to move forward with opening the interchange by paving the ramps. Also instead of standard intersections at the interchange, roundabouts will be provided at the intersections for better traffic movement. This project also includes improvements to the intersection of Oakdale Road and Mt. Holly-Huntersville Road by providing a roundabout to improve traffic flow and improve safety.

III. CHANGES IN PROPOSED ACTION AND ENVIRONMENTAL CONSEQUENCES

The interchange ramps will be paved as originally planned in EIS, however instead of standard intersections, new roundabouts will be constructed at both ramp terminals of the interchange. Also, the intersection of Oakdale Road and Mt. Holly-Huntersville Road will be improved by providing new roundabout. All three roundabouts will be constructed within existing right of way but may require some right of way or construction easement.

In order to evaluate the traffic flow impacts of converting the existing grade separation to a diamond interchange, intersection traffic volumes using the Traffic forecast for 2015 and 2035 dated January 2014 were used. Oakdale Road is a three (3) lane roadway (middle lane is Two-Way Left-Turn Lane) TWLTL with a 2012 AADT of 5,100 vehicles per day. Capacity analysis were performed for the base year (2015) and the design year (2035) peak hour using SIDRA traffic analysis software, version 5. (Please see the attached December 12, 2013 Memo for details)

Roundabout Intersections Analysis Results

The following three intersections were analyzed for base year 2015 and design year 2035:

1. The I-485 Eastbound (EB) Ramps and SR 2042 (Oakdale Rd.) Interchange Intersection
2. The I-485 Westbound (WB) Ramps and SR 2042 (Oakdale Rd.) Interchange Intersection
3. SR 2042 (Oakdale Road) and SR 2004 (Mt. Holly Rd. / Huntersville Rd.) Stop-Controlled Intersection

Base Year (2015)/Design Year (2035) No-Build/Build Analysis

1. The I-485 Eastbound (EB) Ramps and SR 2042 (Oakdale Rd.) Interchange Intersection

A single lane roundabout was analyzed for this intersection. Based on 2013 base year capacity analysis results, this single lane roundabout configuration should work acceptably during the base year 2015. During the design year (2035), an exclusive northbound right-turn lane with 200’ storage plus taper should be added. (Please see the attached December 12, 2013 Memo)

The results of the base year (2015) and Design year (2035) peak hour analysis are shown in the following table: 1

Peak Hour Intersection Analysis Comparisons	2015 No Build/Build Single Lane Roundabout		2035 No Build /Build Single Lane Roundabout★	
	AM	PM	AM	PM
Overall Intersection LOS	A	A	A	A
Worst Movement LOS	A	B	B	B
Worst Movement v/c Ratio	0.47	0.74	0.42	0.61
Worst Movement Max. Queuing	100’	274’ (NB)	100’	182’ (NB)

★ Single lane Roundabout with slip lane

2. The I-485 Westbound (WB) Ramps and SR 2042 (Oakdale Rd.) interchange Intersection

A single lane roundabout was analyzed for this intersection. Based on 2013 base year capacity analysis results, this single lane roundabout configuration should work acceptably during the base year 2015. During the design year (2035), an exclusive southbound right-turn lane with 150’ storage plus taper should be added.

The results of the base year (2015) and Design year (2035) peak hour analysis are shown in the following table: 2

Peak Hour Intersection Analysis Comparisons	2015 No Build /Build Single Lane Roundabout		2035 No Build /Build Single Lane Roundabout★	
	AM	PM	AM	PM
Overall Intersection LOS	A	A	A	A
Worst Movement Delay (Sec.)	A	A	B	B
Worst Movement v/c Ratio	0.79	0.50	0.78	0.79
Worst Movement Max. Queuing	338’ (SB)	117’	327’ (SB)	339’ (off-ramp)

★ Single lane Roundabout with slip lane

3. SR 2042 (Oakdale Rd.) and SR 2004 (Mt. Holly/Huntersville Rd.) Intersection

A single lane roundabout with a northbound exclusive right-turn lane (200') was analyzed for this intersection. Based on 2012 base year capacity analysis results, this single lane roundabout configuration should work acceptably during the 2015 base year.
The results of the base year (2015) and Design year (2035) peak hour analysis are shown in the following table:3

Peak Hour Intersection Analysis Comparisons	2015 No Build /Build Single Lane Roundabout★		2035 No Build /Build Single Lane Roundabout★	
	AM	PM	AM	PM
Overall Intersection LOS	A	A	A	A
Worst Movement Delay (Sec.)	B	B	A	B
Worst Movement v/c Ratio	0.79	0.70	0.65	0.61
Worst Movement Max. Queuing	371' (WB)	251' (EB)	207' (EB)	178' (NB)

★ Single lane Roundabout with slip lane

During the design year (2035), a single lane roundabout with lanes (225' EB right-turn, 200' NB Right-turn, and 200' WB left-turn lanes) was analyzed for this intersection. Based on the capacity analysis results, this single lane roundabout will work acceptably during the 2035 design year.

Interchange Analysis including Mainline

Capacity analysis utilizing Highway Capacity Manual (HCM) 2010 procedures to evaluate the effect of adding an interchange at I-485 and SR 2042 (Oakdale Road) Figure 1 in attached (R-2248G Highway Capacity Analysis Memorandum dated January 8, 2014) shows the location of the proposed interchange. The evaluation analyzes the 2015 No Build, 2015 Build, 2035 No Build, and 2035 Build scenarios. The 2015 No Build scenario includes two separate conditions, one with STIP R-2248E and one without STIP R-2248E. Both conditions are included in this analysis. (See details January 8, 2014 Capacity Analysis Memorandum done by Hatch Mott MacDonald)

The analyses used the traffic forecast prepared for R-2248G dated December 17, 2013. The AM and PM peak hour volumes for the four scenarios are presented in Figure 2 through Figure 6 in attached (R-2248G Highway Capacity Analysis Memorandum dated January 8, 2014). The No Build analysis was based upon existing laneage (no interchange) as shown on aerial photography. The Build analysis laneage was based on a plan sheet and supplemental information provided by the NCDOT Roadway Design Project Engineer and aerial photography of the existing ramp stub-outs. The purpose of this analysis is to compare the No Build conditions to the Build conditions in years 2015 and 2035.

No Build Scenarios

In the 2015 and 2035 No Build scenarios, I-485 consists of a six-lane freeway, with three lanes in each direction. Existing Oakdale Road is grade separated with I-485. The four ramp stub-outs for

the R-2248G project are in place along I-485. The free flow speed was estimated, using HCM 2010 methodologies, to be 73.1 miles per hour for the No Build conditions. The terrain is assumed to be rolling and the percentage of trucks and recreational vehicles was taken from the R-2248G traffic forecast. Given there is no interchange at this location currently, the No Build analyses consisted of basic freeway analyses only.

Build Scenarios

In the 2015 and 2035 Build scenarios, I-485 consists of a six-lane freeway, with three lanes in each direction. STIP R-2248G proposes to convert the existing Oakdale Road grade separation with I-485 to a standard diamond interchange. For the purposes of this analysis, existing aerial photography along with design information provided by the NCDOT Roadway Design Project Engineer were both used.

For the ramp analyses, on I-485 eastbound, the diverge was analyzed with a 250-foot deceleration length and the merge was analyzed with a 900-foot acceleration length (including taper distance). In the I-485 westbound direction, the diverge was analyzed with a 250-foot deceleration length and the merge was analyzed with a 900-foot acceleration length (including the taper distance).
For the basic freeway segment analyses, the free flow speed was estimated using a base free flow speed of 75.4 miles per hour and HCM 2010 methodologies. The terrain is assumed to be rolling and the percentage of trucks and recreational vehicles was taken from the R-2248G traffic forecast. The provided traffic forecast did not include adjacent interchanges; therefore, for the Build analyses, the adjacent interchange ramps at NC 24 (WT Harris Boulevard) and NC 16 (Brookshire Boulevard) were not included in this analysis. The distance between the proposed ramps at the Oakdale Road interchange and the existing ramps at NC 24 is approximately 2.30 miles while the distance to the NC 16 ramps is approximately one mile. However, the analysis included the effects of the adjacent ramps at the proposed SR 2042 (Oakdale Road) interchange itself.

Analysis Results

Tables 4 and 5 provide the Highway Capacity Software analyses results and those results are discussed after the respective tables.

Table 4: 2015 No Build and Build Level of Service /Density (pc/mi/ln)

Segment	Segment Type	2015 No Build W/O R-2248E		2015 No Build with R-2248E		2015 Built	
		AM	PM	AM	PM	AM	PM
I-485 Eastbound at Oakdale Road Overpass	Freeway	B/11.2	B/13.7	B/14.7	C/18.3	N/A	N/A
I-485 Westbound at Oakdale Road Overpass	Freeway	B/13.7	B/11.2	C/18.3	B/14.7	N/A	N/A

I-485 Eastbound to Oakdale Road	Diverge	N/A	N/A	N/A	N/A	C/22.7	C/26.7
I-485 Eastbound Between Oakdale Road Ramps	Freeway*	B/11.2	B/13.7	B/14.7	C/18.3	B/15.6	C/19.1
I-485 Eastbound from Oakdale Road	Merge	N/A	N/A	N/A	N/A	B/19.1	C/21.7
I-485 Eastbound After Oakdale Road Merge	Freeway*	B/11.2	B/13.7	B/14.7	C/18.3	B/17.4	C/21.3
I-485 Westbound Before Oakdale Road Diverge	Freeway*	B/11.2	B/13.7	B/14.7	C/18.3	C/21.3	B/17.4
I-485 Westbound to Oakdale Road	Diverge	N/A	N/A	N/A	N/A	C/27.3	C/23.5
I-485 Westbound Between Oakdale Road Ramps	Freeway*	B/11.2	B/13.7	B/14.7	C/18.3	C/19.1	B/15.6
I-485 Westbound from Oakdale Road	Merge	N/A	N/A	N/A	N/A	C/21.0	B/17.0
I-485 Westbound After Oakdale Road Merge	Freeway*	B/11.2	B/13.2	B/14.7	C/18.3	C/19.8	B/15.7

* No Build level of service and delay is for segment at Oakdale Road Overpass and listed here for comparison purposes

As shown in Table 4, all existing movements and proposed interchange movements operate at LOS C or better in 2015. Based on this information, congestion is not anticipated at the proposed interchange in 2015.

Table 5: 2035 No Build and Build Level of Service /Density (pc/mi/ln)

Segment	Segment Type	2035 No Build		2035 Built	
		AM	PM	AM	PM
I-485 Eastbound at Oakdale Road Overpass	Freeway	C/22.6	D/30.3	N/A	N/A
I-485 Westbound at Oakdale Road Overpass	Freeway	D/30.3	C/22.6	N/A	N/A

I-485 Westbound to Oakdale Road	Diverge	N/A	N/A	E/35.9	D/31.6
I-485 Westbound Between Oakdale Road Ramps	Freeway*	C/22.6	D/30.3	D/28.2	C/21.7
I-485 Westbound from Oakdale Road	Merge	N/A	N/A	D/28.8	C/23.1
I-485 Westbound After Oakdale Road Merge	Freeway*	C/22.6	D/30.3	D/30.7	C/22.4

* No Build level of service and delay is for segment at Oakdale Road Overpass and listed here for comparison purposes

As shown in Table 5, without the proposed interchange, I-485 is anticipated to operate at LOS D or better in the 2035 design year. For the Build conditions, three locations operate at LOS E in the design year. The freeway segments of I-485 eastbound and I-485 westbound west of the proposed interchange are anticipated to operate at LOS E as is the I-485 westbound diverges to Oakdale Road. Based on this information, congestion is anticipated along I-485 in the area of the interchange in the design year; however, it should be noted that the greatest density is 35.9

passenger cars per mile per lane (pc/mi/ln) which is only 0.9 pc/mi/ln outside the threshold for LOS D.

Summary on LOS

Based on the capacity analysis results, all single lane roundabouts will work acceptably during the base year 2015. Some exclusive turn lanes will be needed to accommodate 2035 design year traffic. (See attached December 12, 2013 analysis)
As for as the proposed interchange mainline and ramps are concern, the worst levels of operations in the area of Oakdale Road will degrade from LOS D to LOS E. However, it should be noted that the density exceeds the LOS D threshold by 0.9 pc/mi/ln or less in each instance and that the effect of the adjacent interchanges were not accounted for in the analyses. These results were shared with FHWA Joe Geigle Congestion Management & ITS Engineer in detail on February 18, 2014 email (see the email Appendix B). FHWA concurred with findings and has no further questions.

Environmental Impacts

There are two drainage areas for this project. Mt. Holly – Huntersville Road serves as the dividing line between these two drainages. Water draining to the north of Mt. Holly – Huntersville Road drains to Mountain Island Lake, classified as a WS-IV and B, Critical Area, while drainage to the south flows to Long Creek, classified as WS-IV and 303 (d)(on the 2012 list) for copper.

Due to the Critical Area designation of the project, this project will require Design Standards for Sensitive Waters.

Protected Species

The United States Fish and Wildlife (USFWS) lists four federally protected (endangered) species for Mecklenburg County (Table 6).

Table 6. Federally protected species listed for Mecklenburg County

Scientific Name	Common Name	Habitat Present	Biological Conclusion
Echinacea laevigata	Smooth coneflower	Yes	No Effect
Helianthus schweinitzii	Schweinitz's sunflower	Yes	No Effect
Lasmigona decorata	Carolina heelsplitter	No	No Effect
Rhus michauxii	Michaux's sumac	Yes	No Effect

NCDOT biologists surveyed the project area on October 2, 2013. Suitable habitat is present for the three plants listed for Mecklenburg County. No specimens were located. A review of NCNHP records on October 4, 2013, indicates no known occurrences of listed species within 1.0 mile of the study area.

IV. LIST OF ENVIRONMENTAL COMMITMENTS

Due to the project draining to an area designated as “Critical Area“, this project will be subject to “NCDOT’s Design Standards for Sensitive Waters.”

V. COORDINATION

Project Development and Environmental Analysis Unit personnel have discussed current project proposals with others as follows:

Design Engineer:	Gregory Brew	11/22/2013 Date
FHWA Engineer:	Michael Batuzich	11/25/2013 Date
Permits Section:	Michael Turchy	10/09/2013 Date
Congestion Management:	James Dunlop	01/28/2014 Date

MEMORANDUM TO: Zahid Baloch, Project Development Engineer
Project Development Section

FROM: Michael Turchy, Environmental Specialist
Natural Environment Section

SUBJECT: Water resources and protected species update for a Federal Highway Administration (FHWA) **Right of Way Consultation** for the proposed ramp creation on I-485 at Oakdale Road and improvements extending to Mt. Holly – Huntersville Road in Mecklenburg County, TIP R-2248 G.

This natural resources update is based off of the mapping provided for the Environmental Input Request (attached) and project description. The project description indicates that that the ramps, which are currently completely graded out, will be paved, traffic circles installed at the bottom of those ramps on Oakdale Road, and the intersection of Oakdale Road and Mt Holly – Huntersville Road to be transformed into a traffic circle.

Any additional improvements, such as road widening or pipe extensions, may require a higher level of environmental investigations.

Water Resources

There are two drainage areas for this project. Mt. Holly – Huntersville Road serves as the dividing line between these two drainages. Water draining to the north of Mt. Holly – Huntersville road drains to Mountain Island Lake, classified as a WS-IV and B, Critical Area, while drainage to the south flows to Long Creek, classified as WS-IV and 303 (d)(on the 2012 list) for copper.

Due to the Critical Area designation of the project, this project will require Design Standards for Sensitive Waters.

Protected Species

The United States Fish and Wildlife (USFWS) lists four federally protected (endangered) species for Mecklenburg County (Table 1).

Table 1. Federally protected species listed for Mecklenburg County

Scientific Name	Common Name	Habitat Present	Biological Conclusion
Echinacea laevigata	Smooth coneflower	Yes	No Effect
Helianthus schweinitzii	Schweinitz's sunflower	Yes	No Effect
Lasmigona decorata	Carolina heelsplitter	No	No Effect
Rhus michauxii	Michaux's sumac	Yes	No Effect

NCDOT biologists surveyed the project area on October 2, 2013. Suitable habitat is present for the three plants listed for Mecklenburg County. No specimens were located. A review of NCNHP records on October 4, 2013, indicates no known occurrences of listed species within 1.0 mile of the study area.

Project Commitments

The greensheet for the latest section of R-2248, was for the E section which was let on May 18, 2010.

This greensheet is attached. However, no commitments will remain that will apply to the current "G" section of the project. Therefore, it is recommended that a new project commitment sheet be developed and the following commitment should be added:

Due to the project draining to an area designated as "Critical Area", this project will be subject to "NCDOT's Design Standards for Sensitive Waters."

Subject: **R-2248G Highway Capacity Analysis Memorandum**

From: **Nathan Phillips, PE**
Senior Transportation Engineer
Hatch Mott MacDonald (License No. F-0669)
7621 Purfoy Road
Fuquay-Varina, NC 27256

As requested, Hatch Mott MacDonald I&E, LLC (HMM) has developed an analysis utilizing Highway Capacity Manual (HCM) 2010 procedures to evaluate the effect of adding an interchange at I-485 and SR 2042 (Oakdale Road) as part of STIP R-2248G. ***Figure 1*** shows the location of the proposed interchange. The evaluation analyzes the 2015 No Build, 2015 Build, 2035 No Build, and 2035 Build scenarios. The 2015 No Build scenario includes two separate conditions, one with STIP R-2248E and one without STIP R-2248E. Both conditions are included in this analysis and memorandum.

The analyses used the traffic forecast prepared for R-2248G dated December 17, 2013. The AM and PM peak hour volumes for the four scenarios are presented in ***Figure 2*** through ***Figure 6***. The No Build analysis was based upon existing laneage (no interchange) as shown on aerial photography. The Build analysis laneage was based on a plan sheet and supplemental information provided by the NCDOT Roadway Design Project Engineer and aerial photography of the existing ramp stub-outs. The purpose of this technical memorandum is to compare the No Build conditions to the Build conditions in years 2015 and 2035.

No Build Scenarios

In the 2015 and 2035 No Build scenarios, I-485 consists of a six-lane freeway, with three lanes in each direction. Existing Oakdale Road is grade separated with I-485. The four ramp stub-outs for the R-2248G project are in place along I-485. The free flow speed was estimated, using HCM 2010 methodologies, to be 73.1 miles per hour for the No Build conditions. The terrain is assumed to be rolling and the percentage of trucks and recreational vehicles was taken from the R-2248G traffic forecast. Given there is no interchange at this location currently, the No Build analyses consisted of basic freeway analyses only.

Build Scenarios

In the 2015 and 2035 Build scenarios, I-485 consists of a six-lane freeway, with three lanes in each direction. STIP R-2248G proposes to convert the existing Oakdale Road grade separation with I-485 to a standard diamond interchange. For the purposes of this analysis, existing aerial photography along with design information provided by the NCDOT Roadway Design Project Engineer were both used.

For the ramp analyses, on I-485 eastbound, the diverge was analyzed with a 250-foot deceleration length and the merge was analyzed with a 900-foot acceleration length (including taper distance). In the I-485 westbound direction, the diverge was analyzed with a 250-foot deceleration length and the merge was analyzed with a 900-foot acceleration length (including the taper distance).

For the basic freeway segment analyses, the free flow speed was estimated using a base free flow speed of 75.4 miles per hour and HCM 2010 methodologies. The terrain is assumed to be rolling and the percentage of trucks and recreational vehicles was taken from the R-2248G traffic forecast. The provided traffic forecast did not include adjacent interchanges; therefore, for the Build analyses, the adjacent interchange ramps at NC 24 (WT Harris Boulevard) and NC 16 (Brookshire Boulevard) were not included in this analysis. The distance between the proposed ramps at the Oakdale Road interchange and the existing ramps at NC 24 is approximately 2.30 miles while the distance to the NC 16 ramps is approximately one mile. However, the analysis included the effects of the adjacent ramps at the proposed SR 2042 (Oakdale Road) interchange itself.

Analysis Results

Tables 1 and ***2*** provide the Highway Capacity Software analyses results and those results are discussed after the respective tables. The Highway Capacity Software analyses are located after the figures.

Table 1: 2015 No Build and Build Level of Service/Density (pc/mi/ln)

I-485 Westbound from Oakdale Road	Merge	N/A	N/A	N/A	N/A	C/21.0	B/17.0
I-485 Westbound After Oakdale Road Merge	Freeway*	B/11.2	B/13.7	B/14.7	C/18.3	C/19.8	B/15.7

*No Build level of service and delay is for segment at Oakdale Road Overpass and listed here for comparison purposes

As shown in ***Table 1***, all existing movements and proposed interchange movements operate at LOS C or better in 2015. Based on this information, congestion is not anticipated at the proposed interchange in 2015.

Table 2: 2035 No Build and Build Level of Service/Density (pc/mi/ln)

Segment	Segment Type	2035 No Build		2035 Build	
		AM	PM	AM	PM
I-485 Eastbound at Oakdale Road Overpass	Freeway	C/22.6	D/30.3	N/A	N/A
I-485 Westbound at Oakdale Road Overpass	Freeway	D/30.3	C/22.6	N/A	N/A

I-485 Westbound Before Oakdale Road Diverge	Freeway*	C/22.6	D/30.3	**E/35.2**	D/26.5
I-485 Westbound to Oakdale Road	Diverge	N/A	N/A	**E/35.9**	D/31.6
I-485 Westbound Between Oakdale Road Ramps	Freeway*	C/22.6	D/30.3	D/28.2	C/21.7
I-485 Westbound from Oakdale Road	Merge	N/A	N/A	D/28.8	C/23.1
I-485 Westbound After Oakdale Road Merge	Freeway*	C/22.6	D/30.3	D/30.7	C/22.4

*No Build level of service and delay is for segment at Oakdale Road Overpass and listed here for comparison purposes

As shown in ***Table 2***, without the proposed interchange, I-485 is anticipated to operate at LOS D or better in the 2035 design year. For the Build conditions, three locations operate at **LOS E** in the design year. The freeway segments of I-485 eastbound and I-485 westbound west of the proposed interchange are anticipated to operate at **LOS E** as is the I-485 westbound diverge to Oakdale Road. Based on this information, congestion is anticipated along I-485 in the area of the interchange in the design year; however, it should be noted that the greatest density is 35.9 passenger cars per mile per lane (pc/mi/ln) which is only 0.9 pc/mi/ln outside the threshold for LOS D.

Summary

With the proposed interchange, the worst levels of operations in the area of Oakdale Road will degrade from LOS D to **LOS E.** However, it should be noted that the density exceeds the LOS

D threshold by 0.9 pc/mi/ln or less in each instance and that the effect of the adjacent interchanges were not accounted for in the analyses.

HCS 2010: Freeway Merge and Diverge Segments Release 6.50

Phone: Fax:
E-mail:

Diverge Analysis

Analyst:	Millen
Agency/Co.:	HMM
Date performed:	12/19/2013
Analysis time period:	AM Build
Freeway/Dir of Travel:	I-485 Eastbound
Junction:	Diverge to Oakdale Road
Jurisdiction:	Mecklenburg County, NC
Analysis Year:	2035
Description:	R-2248G - Oakdale Road Interchange Analysis

Freeway Data

Type of analysis	Diverge	
Number of lanes in freeway	3	
Free-flow speed on freeway	70.0	mph
Volume on freeway	3948	vph

Off Ramp Data

Side of freeway	Right	
Number of lanes in ramp	1	
Free-Flow speed on ramp	45.0	mph
Volume on ramp	239	vph
Length of first accel/decel lane	250	ft
Length of second accel/decel lane		ft

Adjacent Ramp Data (if one exists)

Does adjacent ramp exist?	No	
Volume on adjacent ramp		vph
Position of adjacent ramp		
Type of adjacent ramp		
Distance to adjacent ramp		ft

Conversion to pc/h Under Base Conditions

Junction Components	Freeway	Ramp	Adjacent Ramp	
Volume, V (vph)	3948	239		vph
Peak-hour factor, PHF	0.90	0.90		
Peak 15-min volume, v15	1097	66		v
Trucks and buses	6	3		%
Recreational vehicles	0	0		%
Terrain type:	Rolling	Rolling		
Grade	0.00 %	0.00 %	%	
Length	0.00 mi	0.00 mi	mi	
Trucks and buses PCE, ET	2.5	2.5		
Recreational vehicle PCE, ER	2.0	2.0		

Heavy vehicle adjustment, fHV	0.917	0.957	
Driver population factor, fP	1.00	1.00	
Flow rate, vp	4781	278	pcph

Estimation of V12 Diverge Areas

L_{EQ} = (Equation 13-12 or 13-13)

P_{FD} = 0.628 Using Equation 5

$v_{12} = v_R + (v_F - v_R) P_{FD}$ = 3104 pc/h

Capacity Checks

	Actual	Maximum	LOS F?
$v_{Fi} = v_F$	4781	7200	No
$v_{FO} = v_F - v_R$	4503	7200	No
v_R	278	2100	No
v_3 or v_{av34}	1677 pc/h	(Equation 13-14 or 13-17)	
Is v_3 or v_{av34}	> 2700 pc/h?	No	
Is v_3 or v_{av34}	> 1.5 v_{12} /2	No	

If yes, v_{12A} = 3104 (Equation 13-15, 13-16, 13-18, or 13-19)

Flow Entering Diverge Influence Area

	Actual	Max Desirable	Violation?
v_{12}	3104	4400	No

Level of Service Determination (if not F)

Density, $D = 4.252 + 0.0086 v_R - 0.009 L_{12}$ = 28.7 pc/mi/ln

Level of service for ramp-freeway junction areas of influence D

Speed Estimation

Intermediate speed variable, D_S = 0.323

Space mean speed in ramp influence area, S_R = 61.0 mph

Space mean speed in outer lanes, S_0 = 74.1 mph

Space mean speed for all vehicles, S = 65.0 mph

Diverge Analysis

Analyst:	Millen
Agency/Co.:	HMM
Date performed:	12/19/2013
Analysis time period:	PM Build
Freeway/Dir of Travel:	I-485 Eastbound
Junction:	Diverge to Oakdale Road
Jurisdiction:	Mecklenburg County, NC
Analysis Year:	2035
Description:	R-2248G - Oakdale Road Interchange Analysis

Freeway Data

Type of analysis	Diverge	
Number of lanes in freeway	3	
Free-flow speed on freeway	70.0	mph
Volume on freeway	4899	vph

Off Ramp Data

Side of freeway	Right	
Number of lanes in ramp	1	
Free-Flow speed on ramp	45.0	mph
Volume on ramp	347	vph
Length of first accel/decel lane	250	ft
Length of second accel/decel lane		ft

Adjacent Ramp Data (if one exists)

Does adjacent ramp exist?	No	
Volume on adjacent ramp		vph
Position of adjacent ramp		
Type of adjacent ramp		
Distance to adjacent ramp		ft

Conversion to pc/h Under Base Conditions

Junction Components	Freeway	Ramp	Adjacent Ramp	
Volume, V (vph)	4899	347		vph
Peak-hour factor, PHF	0.90	0.90		
Peak 15-min volume, v15	1361	96		v
Trucks and buses	6	3		%
Recreational vehicles	0	0		%
Terrain type:	Rolling	Rolling		
Grade	0.00 %	0.00 %		%
Length	0.00 mi	0.00 mi		mi
Trucks and buses PCE, ET	2.5	2.5		
Recreational vehicle PCE, ER	2.0	2.0		

Heavy vehicle adjustment, fHV	0.917	0.957	
Driver population factor, fP	1.00	1.00	
Flow rate, vp	5933	403	pcph

Estimation of V12 Diverge Areas

L_{EQ} = (Equation 13-12 or 13-13)

P_{FD} = 0.593 Using Equation 5

$v_{12} = v_R + (v_F - v_R) P_{FD}$ = 3683 pc/h

Capacity Checks

	Actual	Maximum	LOS F?
$v_{Fi} = v_F$	5933	7200	No
$v_{FO} = v_F - v_R$	5530	7200	No
v_R	403	2100	No
v_3 or v_{av34}	2250 pc/h	(Equation 13-14 or 13-17)	
Is v_3 or v_{av34}	> 2700 pc/h?	No	
Is v_3 or v_{av34}	> 1.5 v_{12} /2	No	

If yes, v_{12A} = 3683 (Equation 13-15, 13-16, 13-18, or 13-19)

Flow Entering Diverge Influence Area

	Actual	Max Desirable	Violation?
v_{12}	3683	4400	No

Level of Service Determination (if not F)

Density, $D = 4.252 + 0.0086\, v_R - 0.009\, L_D$ = 33.7 pc/mi/ln

Level of service for ramp-freeway junction areas of influence D

Speed Estimation

Intermediate speed variable,	D_S = 0.334	
Space mean speed in ramp influence area,	S_R = 60.6	mph
Space mean speed in outer lanes,	S_0 = 71.9	mph
Space mean speed for all vehicles,	S = 64.5	mph

Diverge Analysis

Analyst:	Millen
Agency/Co.:	HMM
Date performed:	12/19/2013
Analysis time period:	AM Build
Freeway/Dir of Travel:	I-485 Westbound
Junction:	Diverge to Oakdale Road
Jurisdiction:	Mecklenburg County, NC
Analysis Year:	2035
Description:	R-2248G - Oakdale Road Interchange Analysis

Freeway Data

Type of analysis	Diverge	
Number of lanes in freeway	3	
Free-flow speed on freeway	70.0	mph
Volume on freeway	5251	vph

Off Ramp Data

Side of freeway	Right	
Number of lanes in ramp	1	
Free-Flow speed on ramp	45.0	mph
Volume on ramp	699	vph
Length of first accel/decel lane	250	ft
Length of second accel/decel lane		ft

Adjacent Ramp Data (if one exists)

Does adjacent ramp exist?	No	
Volume on adjacent ramp		vph
Position of adjacent ramp		
Type of adjacent ramp		
Distance to adjacent ramp		ft

Conversion to pc/h Under Base Conditions

Junction Components	Freeway	Ramp	Adjacent Ramp	
Volume, V (vph)	5251	699		vph
Peak-hour factor, PHF	0.90	0.90		
Peak 15-min volume, v15	1459	194		v
Trucks and buses	6	3		%
Recreational vehicles	0	0		%
Terrain type:	Rolling	Rolling		
Grade	0.00 %	0.00 %		%
Length	0.00 mi	0.00 mi		mi
Trucks and buses PCE, ET	2.5	2.5		
Recreational vehicle PCE, ER	2.0	2.0		

Heavy vehicle adjustment, fHV	0.917	0.957	
Driver population factor, fP	1.00	1.00	
Flow rate, vp	6360	812	pcph

Estimation of V12 Diverge Areas

L_{EQ} = (Equation 13-12 or 13-13)

P_{FD} = 0.564 Using Equation 5

$v_{12} = v_R + (v_F - v_R) P_{FD}$ = 3939 pc/h

Capacity Checks

	Actual	Maximum	LOS F?
$v_{Fi} = v_F$	6360	7200	No
$v_{FO} = v_F - v_R$	5548	7200	No
v_R	812	2100	No
v_3 or v_{av34}	2421 pc/h	(Equation 13-14 or 13-17)	

Is v_3 or v_{av34} > 2700 pc/h? No

Is v_3 or v_{av34} > 1.5 v_{12} /2 No

If yes, v_{12A} = 3939 (Equation 13-15, 13-16, 13-18, or 13-19)

Flow Entering Diverge Influence Area

	Actual	Max Desirable	Violation?
v_{12}	3939	4400	No

Level of Service Determination (if not F)

Density, $D_R = 4.252 + 0.0086\, v_{12} - 0.009\, L_D$ = 35.9 pc/mi/ln

Level of service for ramp-freeway junction areas of influence E

Speed Estimation

Intermediate speed variable,	D_S = 0.371	
Space mean speed in ramp influence area,	S_R = 59.6	mph
Space mean speed in outer lanes,	S_0 = 71.2	mph
Space mean speed for all vehicles,	S = 63.6	mph

TIP Project: R-2248G
Division: 10
County: Mecklenburg
Description: I-485 Charlotte Outer Loop Interchange with SR 2042 (Oakdale Road)

MEMORANDUM

Document Sent Electronically

To: Zahid M. Baloch, P.E., Project Development Engineer
Project Development – Western Region/Turnpike

From: Mohammad S. Islam, P.E., Project Design Engineer
Congestion Management Section

Subject: I-485 Interchange with SR 2042 (Oakdale Road) Corridor Roundabout Analysis

As requested, the Congestion Management Section has completed a draft review of the subject interchange and intersection. In order to evaluate the traffic flow impacts of converting the existing grade separation to a diamond interchange, we calculated intersection traffic volumes using the DRAFT Traffic forecast for 2015 and 2035 dated January 2014. Oakdale Road is a three (3) lane roadway (middle lane TWLTL) with a 2012 AADT of 5,100 vehicles per day. We performed capacity analysis for the base year (2015) and the design year (2035) peak hour using SIDRA traffic analysis software, version 5.

The following three intersections were analyzed for base year 2015 and design year 2035:

1. The I-485 Eastbound (EB) Ramps and SR 2042 (Oakdale Rd.) Interchange Intersection
2. The I-485 Westbound (WB) Ramps and SR 2042 (Oakdale Rd.) Interchange Intersection
3. SR 2042 (Oakdale Road) and SR 2004 (Mt. Holly Rd. / Huntersville Rd.) Stop-Controlled Intersection

Our analysis results and sample geometrical figures are attached with this letter.

Base Year (2015)/Design Year (2035) No-Build/Build Analysis

1. The I-485 Eastbound (EB) Ramps and SR 2042 (Oakdale Rd.) Interchange Intersection
A single lane roundabout was analyzed for this intersection. Based on 2012 base year capacity analysis results, this single lane roundabout configuration should work acceptably during the base year 2015. During the design year (2035), an exclusive northbound right-turn lane with 200' storage plus taper should be added.

RALEIGH NC 27699-1561

TELEPHONE: 919-773-2800
FAX: 919-771-2745
WEBSITE: WWW.NCDOT.ORG

LOCATION:
750 NORTH GREENFIELD PARKWAY
GARNER NC 27529

2. The I-485 Westbound (WB) Ramps and SR 2042 (Oakdale Rd.) interchange Intersection
A single lane roundabout was analyzed for this intersection. Based on 2012 base year capacity analysis results, this single lane roundabout configuration should work acceptably during the base year 2015. During the design year (2035), an exclusive southbound right-turn lane with 150' storage plus taper should be added.

3. SR 2042 (Oakdale Rd.) and SR 2004 (Mt. Holly/Huntersville Rd.) Intersection
A single lane roundabout with a northbound exclusive right-turn lane (200') was analyzed for this intersection. Based on 2012 base year capacity analysis results, this single lane roundabout configuration should work acceptably during the base year 2015.

During the design year (2035), a single lane roundabout with lanes (225' EB right-turn, 200' NB Right-turn, and 200' WB left-turn lanes) was analyzed for this intersection. Based on capacity analysis results, this single lane roundabout configuration works acceptably during the design year 2035.

Based on our analysis, we have the following recommendations for design and these recommendations should be installed during the construction of this TIP project:

1. The I-485 Eastbound (EB) Ramps and SR 2042 (Oakdale Rd.) Interchange Intersection
- A single lane roundabout with an exclusive NB right-turn lane with 200' storage with appropriate taper.

2. The I-485 Westbound (WB) Ramps and SR 2042 (Oakdale Rd.) Interchange Intersection
- A single lane roundabout with an exclusive SB right-turn lane with 150' storage with appropriate taper.

3. SR 2042 (Oakdale Rd.) and SR 2004 (Mt. Holly/Huntersville Rd.) Intersection
- A single lane roundabout with exclusive lanes (225' EB right-turn, 200' NB Right-turn, and 150' WB left-turn lanes with appropriate taper).

A final memo will be issued once the traffic forecast has been finalized. Congestion Management Section is also reviewing freeway operations on I-485 with the proposed interchange, and will issue a separate review memo shortly.

If you have questions regarding this analysis, or if further analysis is requested, please contact me or Congestion Management Engineer James H. Dunlop, P.E., at (919) 773-2800.

Joe, per our recent conversation, stating our data on this matter below for appropriate forwarding as you see fit. Please let me know if you need any additional information, and please advise if we get concurrence from HQ so we can advise appropriate NCDOT authorities. –Mike

---

During the planning stages of I-485, the City of Charlotte asked for four interchanges (West Boulevard, NC 51 in Mint Hill, Weddington Road, and Oakdale) to be delayed. This allowed the City/County to better manage the land development "rush" that typically follows a beltway project such as I-485. While the land uses were included in the original (and most recent) traffic forecasts, this decision allowed them to better direct growth towards areas that already had sufficient infrastructure. Since the original construction of I-485, two of these interchanges, West Boulevard and NC 51, have been completed. Besides the subject interchange, the Department and City are in the initial stages of re-starting the Weddington Road interchange project.

This section of I-485 was STIP project R-2248B during the Planning and Environmental stage of the project. The EIS was signed and approved by FHWA on January 29, 1992. The original R-2248B was from NC 27 to beyond I-85 (approx. 16 miles; the entire remaining northern portion of I-485). As this project proceeded into design and construction phases, R-2248B was subdivided into R-2248C (construction completed in 2007), R-2248D (construction completed in 2009), and R-2248E (currently under construction). The section including the subject interchange was R-2248C, and when the decision was made NOT to construct the Oakdale interchange at that time, the Oakdale Interchange became R-2248G (currently in the planning phase). Since, and today, the Oakdale interchange has continued to be shown in the Long Range Transportation Plan (http://crtpo.org/PDFs/2035_LRTP/Document/Maps/25Figure11-1Thoroughfare.pdf).

The traffic forecast used for the R-2248B EIS predicted a 2010 design year AADT of 24,000 on I-485. It also had about the same AADT (23,800) on Mount Holly-Huntersville Road, which parallels I-485 in this area. The current (2012) AADT on I-485 is 39,000vpd, with about 10,000 AADT on Mount Holly-Huntersville. So while the original traffic forecast was on target regarding the total trips in the basic corridor, it underestimated the benefits of a 65 MPH free-flow facility compared to a two-lane 45 MPH roadway. The 2035 design year forecast (R-2248G) predicts I-485 traffic at about 96,000 AADT near the interchange, and 15,800 AADT on Mount Holly-Huntersville.

The EIS also indicated that Oakdale Road would carry an AADT of 18,000 in 2010 near the interchange. The current 2012 AADT on Oakdale Road is much less (5,100) without the interchange, but the R-2248G forecast predicts an AADT of 14,000 in 2035.

Even with the expected significant volume increase on I-485 beyond the original EIS, the current R-2248G capacity analysis indicates the interstate segments and points will operate at LOS E or better in the 2035 design year. According to the "R-2248G Analysis Memo" sealed January 8, 2014, only three segments/points are expected to exceed LOS D in the 2035 Build scenario, and those three elements exceed the LOS D threshold by less than 1 passenger car per mile per lane.

If any questions or if further clarification is needed, please advise.

Subject: RE: IJR needed?

Joe

It is true that proposed interchanges on new sections of Interstate do not require a separate IJR. However, it is assumed that the policy points were addressed as a part of the project development and design process for the new Interstate. With this understanding, the DOT should have conducted the required analyses for the proposed interchange and have those on file. It is strongly suggested that those analyses along with assumptions about land use etc. be reexamined and updated as required to ensure that the proposed interchange will still function as originally expected. This would not require the submittal of an IJR but can be addressed through a technical memo or other document as agreed upon by the Division and the DOT.

Subject: IJR needed?

Mick,

I have a question for you regarding whether an IJR is required in the unique situation described below:

- I-485 around Charlotte was constructed around 1992 (new location)
- While the subject interchange was in the NEPA document and designed, for some reason it was not built with the rest of the project (underpass constructed, ramps graded, just not paved)
- Fast forward 20+ years and now they want to pave the ramps and complete the interchange. Spacing is more than adequate (2+ miles in both directions to the nearest interchange)
- I have no other traffic related data at the moment

The state argues that an IJR is not required as the interchange planned and designed as a part of the original new location project, and interchanges on new location interstates do not require IJRs except where they tie into existing interstate.

My stance is that it has been 20 years and traffic patterns may have changed significantly. Also, while an IJR was not initially required as it was new location, I argue that the 8 year shelf life of a typical IJR in this case still applies to the original design found in the NEPA document.

What is your opinion on the matter?

Thanks,

Joe

Hi, Please see the comments from Michael Turchy about the green sheet (project commitments), I think our thoughts were that this project is under TIP R-2248, so we should keep it in our NRTR Report (not for R-2248G) . If any of you think that this green sheet is not needed we can take it out. Thanks

Hi Zahid,
Attached are my comments.

I just read Imad's reply. Because the project is under the TIP R-2248, we should "in theory" be keeping the same greensheet. However let's chat about this tomorrow. I'll come by sometime.

Mitch, As per your request I talk to John Conforti this morning to add a signature page to File to Memo letter. He told me to confirm with you again about this because this is state funded, do you still think we need a signature page. I and John has so issue to add a signature page just want to double check with you. I tried to call you this morning and for some reason I can get through, may be it is just my phone. Thanks
