Dear Sir,

Subject: **Application for a Section 401 Water Quality Certification and Neuse Buffer Authorization** for the replacement of Bridge No. 43 over the South Flat River on SR 1112(Charlie Long Road), State Project No. 8.2380801, Federal Aid Project No. BRZ-1112(7), Division 5, T.I.P No. B-4600.

Reference: Section 401 Water Quality Certification issued on October 20, 2009
Section 404 permit application dated October 13, 2009

It is requested that the above referenced Water Quality Certification be redacted. This permit application replaces the previous permit application for a Nationwide Permit 33 dated October 13, 2009 and the Division of Water Quality permit issued on October 20, 2009.

The North Carolina Department of Transportation (NCDOT) proposes to replace bridge No. 43 over the South Flat River on SR 1112 (Charlie Long Road).

There will be 65 feet of permanent stream impacts from bank stabilization associated with this bridge replacement. Therefore, NCDOT wishes to use a NW 13 for bank stabilization.

STORMWATER MANAGEMENT PLAN

Project: 33792.1.1
TIP No. B-4600
Person County 04/20/2009

Hydraulics Project Manager: W. Henry Wells Jr., P.E. (Sungate Design Group),
Marshall Clawson, P.E. (NCDOT Hydraulics Unit)

ROADWAY DESCRIPTION

The project B-4600 consists of constructing a new bridge 105 feet long to replace the existing bridge #43 in Person County on SR-1100 over South Flat River. The total project length is 0.135 miles. The project creates impacts to South Flat River, which is located in the Neuse River Basin. The project drainage systems consist of grated inlets with associated pipe systems, and rip rap energy dissipaters at the pipe outlets.

Jurisdiction Stream: South Flat River

ENVIRONMENTAL DESCRIPTION

The project is located within the Neuse River Basin in Person County, which is not a CAMA county. There are no wetlands within the project limits. The South Flat River is subject to the Neuse River buffer rules. Impacts to the buffer have been minimized by and using rip rap energy dissipaters at the pipe outlets and reducing the roadway approach work to minimize fill slopes encroachment into the buffers.

BEST MANAGEMENT PRACTICES AND MAJOR STRUCTURES

The primary goal of Best Management Practices (BMPs) is to prevent degradation of the states surface waters by the location, construction and operation of the highway system. The BMPs are activities, practices and procedures taken to prevent or reduce stormwater pollution. The BMP measures used on this project to reduce stormwater impacts are:

- Rip rap energy dissipaters at pipe outlets.
