Subject: **Application for Section 404 Nationwide Permit 23 , Section 401 Water Quality Certification, and Jordan Lake Watershed Riparian Buffer Authorization** for the replacement of Bridge No. 12 on SR 2343 (Price Mill Road) over Troublesome Creek in Rockingham County, North Carolina, TIP No. B-4804, Federal Aid Project No. BRZ-2343(2).

Debit $240.00 from WBS Element 38574.1.1

The North Carolina Department of Transportation (NCDOT) proposes to replace Bridge No. 12 on SR 2343 (Price Mill Road) over Troublesome Creek in Rockingham County. This involves replacement of the existing single span 41-foot long bridge with a 3 barrel reinforced concrete box culvert on the existing location. An offsite detour will be used during construction. There will be 124 feet of permanent stream impacts due to replacement of the bridge. Bank stabilization accounts for 74 feet of the impacts. There will also be 107 feet of temporary stream impacts for installation of the box culvert.

Please find enclosed the Pre-Construction Notification (PCN) form, Ecosystem Enhancement Program (EEP) letter, stormwater management plan, permit drawings, buffer drawings, and design plans for the above referenced project. A Programmatic Categorical Exclusion (PCE) was completed for this project on May 16, 2011 and distributed shortly thereafter. Additional copies are available upon request.

The proposed let date for the project is February 19, 2013 with a review date of December 17, 2012. However, the let date may advance as additional funds become available.

The proposed culvert will be constructed on the existing bridge alignment. Wetlands are located in project vicinity, but are not impacted by project design. A culvert is being constructed to replace the bridge because it is less than half the cost, twice the life expectancy, low maintenance, and hydraulically adequate. Class I riprap will be used at the proposed culvert inlet/outlet to minimize erosion to the stream banks. An off-site detour will also be utilized.

1b. Specifically describe measures taken to avoid or minimize the proposed impacts through construction techniques.

NCDOT will use Best Management Practices for Bridge Demolition and Removal as well as Best Management Practices for the Protection of Surface Waters. Design Standards in Sensitive Watersheds will also be used.

Dear Dr. Thorpe:

Subject: EEP Mitigation Acceptance Letter:

B-4804, Replace Bridge Number 12 over Troublesome Creek on SR 2343, Rockingham County

The purpose of this letter is to notify you that the Ecosystem Enhancement Program (EEP) will provide the stream mitigation and buffer mitigation for the subject project. Based on the information supplied by you on June 21, 2012, the stream impacts are located in CU 03030002 of the Cape Fear River basin in the Central Piedmont (CP) Eco-Region, and are as follows:

Stream and Wetlands	River Basin	CU Location	Eco-Region	Stream			Wetlands		
				Cold	Cool	Warm	Riparian	Non-Riparian	Coastal Marsh
Impacts	Cape Fear	03030002	CP	0	0	50	0	0	0

All buffer mitigation requests and approvals are administrated through the Riparian Restoration Buffer Fund. The NCDOT will be responsible to ensure that appropriate compensation for the additional buffer mitigation will be provided in the agreed upon method of fund transfer. Upon receipt of the NCDWQ's Buffer Authorization Certification, EEP will transfer funds from MOA Fund into the Riparian Restoration Buffer Fund. Upon completion of transfer payment, NCDOT will have completed its additional riparian buffer mitigation responsibility for B-4804. Subsequently, EEP will conduct a review of current NCDOT ILF mitigation projects in the river basin to determine if available buffer mitigation credits exist. If there are buffer mitigation credits available, then the Riparian Restoration Buffer Fund will purchase the appropriate amount of buffer mitigation credits from NCDOT ILF Fund. The buffer impacts are as follows:

Buffer	River Basin	CU Location	Eco-Region	Buffer		
				Zone 1	Zone 2	TOTAL
Impacts	Cape Fear	03030002 (Jordan Watershed – Haw Arm)	CP	1,685	0	1,685

This stream impact and associated mitigation need were under projected by the NCDOT in the 2012 impact data. EEP will commit to implement sufficient compensatory stream mitigation credits to offset the impacts associated with this project as determined by the regulatory agencies using the delivery timeline listed in Section F.3.c.iii of the N.C. Department of Environment and Natural Resources' Ecosystem Enhancement Program In-Lieu Fee Instrument dated July 28, 2010. If the above referenced impact amounts are revised, then this mitigation acceptance letter will no longer be valid and a new mitigation acceptance letter will be required from EEP.

If you have any questions or need additional information, please contact Ms. Beth Harmon at 919-715-1929.

Sincerely,

James B. Stanfill for

STORMWATER MANAGEMENT PLAN

B-4804, WBS No. 38574.1.1

Rockingham County

Hydraulics Project Manager: Stephen Morgan, PE

Date: 03/27/2012

ROADWAY DESCRIPTION

The project involves the replacement of Bridge No. 12 over Troublesome Creek on SR 2343 (Price Mill Road). The overall length of the project is 0.133 miles. The project will replace an existing 40'-6"single span timber bridge with a 49.7' 3@12' wide by 11' high precast reinforced concrete box culvert buried 1'. An offsite detour will be utilized.

ENVIRONMENTAL DESCRIPTION AND IMPACTS

The project is located in the Cape Fear River Basin. The drainage area at the crossing is approximately 7.31 mi^2. The proposed culvert impacts Troublesome Creek, which is classified as Class C; WS-III, NSW. Troublesome Creek is listed on the 2010 Final 303(d) list of impaired waters for Low Dissolved Oxygen. There are wetlands in the project vicinity, but are not impacted by the project design. Stream impacts are due to the proposed culvert.

Approximately 125' of permanent stream impacts and 202' of temporary stream impacts will occur.

Approximately 7728 ft^2 of buffer zones will be allowable impacts.

BEST MANAGEMENT PRACTICES AND MAJOR STRUCTURES

Best management practices (BMP's) and measures used on the project are an attempt to reduce the impacts to the receiving stream due to erosion and runoff. Class I rip rap is used at the proposed culvert inlet/outlet to minimize erosion to the stream banks.

CULVERT

-L- Station 22+68.92 replace existing bridge over Troublesome Creek with a 3@12' wide by 11' high precast reinforced concrete box culvert. The culvert will be buried 1'.
