Raleigh, North Carolina 27615

ATTN.: Mr. John Thomas
NCDOT Coordinator

Subject: **Individual Permit Application for Section 404 and 401 permits for the Widening of US 321.** US 321 Widening From SR 1370 (Kirby Mountain Road) to SR 1500 (Blackberry Road) in Bailey Camp. Caldwell County. TIP No. R-2237B. State Project No. 6.739001T, NC DOT Division 11, $475.00 Debit WBS Element 34402.1.4.

Dear Sir:

The North Carolina Department of Transportation (NCDOT), in consultation with the Federal Highway Administration (FHWA) proposes to widen US 321 in Caldwell County, from SR 1370 (Kirby Mountain Road) just north of Patterson to SR 1500 (Blackberry Road) in Bailey Camp. The location of the two additional lanes varies from the east to the west side of the existing roadway depending upon the location of existing development, natural and historic resources, severity of terrain, and design objectives. The proposed project is approximately 6.5 miles in length, and will provide four 12-foot lanes with a four-foot painted median and 10-foot shoulders (13 feet with guardrail). The proposed right-of-way varies throughout the project, ranging from approximately 110 to 885 feet. Enclosed with this application is the cover letter, ENG 4345 Form, permit drawings, plan sheets, meeting minutes from the 4B and 4C agency review meetings, a copy of the Ecosystem Enhancement Program (EEP) request letter, and a copy of the United States Fish and Wildlife Service (USFWS) concurrence request letter.

Purpose and Need: As stated in the 1993 Environmental Assessment (EA), the purpose of this project is to increase traffic capacity and safety by widening US 321 from the existing two-lane facility to a four-lane roadway. US 321 is a North Carolina intrastate corridor. The proposed project will help the roadway meet the objectives of the North Carolina intrastate corridor program. The intrastate system plan calls for the widening of

RALEIGH NC

all existing two-lane sections within this corridor to multi-lane facilities. With the exception of the section of US 321 extending from NC 268 to US 221 in Blowing Rock, the US 321 intrastate corridor is currently a multi-lane facility or is presently being widened. US 321 from the South Carolina border south of Gastonia to Boone, North Carolina is defined as the principle north-south route connecting the western piedmont. The roadway improvements will serve to increase the roadway capacity to handle projected growth within the region. Roadway characteristic improvements include adding through and turning lanes, widening shoulders, and straightening substandard curves. These improvements will allow safe passage for slower moving vehicles, permit smoother flow of traffic, allow vehicles to enter and exit the roadway more easily, and reduce the chances of head-on and rear end collisions. In addition, the proposed project is included in the 1993-1999 North Carolina Transportation Improvement Program.

Summary of Impacts: Impacts to jurisdictional areas of R-2237B consist of a total of 0.16 acre of permanent, non-riverine wetland impacts, 0.13 acres of fill in surface waters, and 1,680 linear feet of jurisdictional stream channels. All surface waters impacted by the proposed project are located within the Yadkin-Pee Dee and Catawba River Basins. Impacts to Sites 1 through 6 are located in the Yadkin-Pee Dee River Basin USGS Hydrologic Unit 03040101, subbasin 03-07-01; impacts to Sites 7 and 8 are located in the Catawba River Basin Hydrologic Unit 03050101, subbasin 03-08-31. No 303(d) listed waters are present within the project boundary. Table 1 summarizes the jurisdictional impacts associated with the R-2237B project.

Table 1: Summary of Jurisdictional Impacts (Federal Clean Water Act)

River Basin	Permanent Non-Riverine Wetland (ac)*	Existing Channel Impacts (ft)	Surface Water (ac)
Yadkin Pee-Dee	0.16	889	0.08
Catawba	0.00	791	0.05
Totals	0.16	1,680	0.13

* includes fill, excavation, and mechanized clearing

Summary of Mitigation: Throughout the NEPA and design process this project has been designed to avoid and minimize impacts to jurisdictional areas. The project will be conducted on existing roadway and will thereby minimize natural resource impacts. Specific strategies are detailed elsewhere in this document.

The necessary compensatory mitigation for unavoidable impacts to 0.16 ac non-riverine wetlands and 1,680 linear feet of streams will be provided by the EEP.

PROJECT SCHEDULE

This application applies to Section B of the R-2237 widening project. Construction of Section A has been completed. The following table summarizes the schedule.

Table 2. Project Schedule

Section	Project Limits	Let Date
A	Widening US 321 from NC 268 to SR 1370	July 1997 Completed June 2001
B	Widening US 321 from SR 1370 to SR 1500	December 2004
C	Widening US 321 from SR 1500 to US 221 at Blowing Rock.	March 2009

NEPA DOCUMENT STATUS

An EA was approved on August 6, 1993 in compliance with the National Environmental Policy Act. The EA addressed the widening of US 321 from two to four lanes from NC 268 to US 221 (T.I.P. Project No. R-2237 A/B/C) in Caldwell and Watauga Counties. The EA provided sufficient evidence that an Environmental Impact Statement (EIS) would not be necessary for Sections A and B (between NC 268 and SR 1500). A Finding of No Significant Impact (FONSI) for R-2237 Sections A and B was approved on September 19, 1994. The recommended alternative proposes widening US 321 from two lanes to four 12-foot lanes with a four-foot painted median and a 10-foot shoulder (13 feet with guardrail). Copies of the EA and FONSI have been provided to regulatory review agencies involved in the approval process. Additional copies will be provided upon request.

INDEPENDENT UTILITY

R-2237B is in compliance with 23 CFR Part 771.111(f) which lists the FHWA characteristics of the independent utility of a project:

(1) The project connects logical termini and is of sufficient length to address environmental matters on a broad scope;

(2) The project is usable and a reasonable expenditure, even if no additional transportation improvements are made in the area; and

(3) The project does not restrict consideration of alternatives for other reasonably foreseeable transportation improvements.

RESOURCE STATUS

Wetland and Stream Delineations:

Wetland delineations were conducted using the criteria specified in the 1987 Corps of Engineers Wetland Delineation Manual. Mr. John Thomas of the USACE Raleigh Regulatory Field Office verified the stream and wetland delineations in the field on December 18, 2002. A Jurisdictional Determination for the project was signed by Mr. Thomas on January 29, 2003.

Characterization of Jurisdictional Sites:

Wetlands

R-2237B will have 0.16 acre of permanent non-riverine wetland impacts (Table 3). These impacts occur at Sites 6A and 6B in the Yadkin Pee-Dee River Basin, HU 03040101. Both wetland sites are located within a power line easement surrounded by a Mesic Mixed Hardwood Forest community. The water source for the complex is culvert drainage. The wetlands were delineated as a complex since they are hydrologically connected.

The vegetative community for the complex is dominated by tag alder (*Alnus serrulata*), common elderberry (*Sambucus canadensis*), and cattail (*Typha latifolia*). The area can be classified as a Palustrine, Unconsolidated Bottom, Semi-Permanently Flooded, Diked/Impounded (PUBAh) system (Cowardin et al., 1979).

Table 3. Jurisdictional Impacts within R-2237B

Streams

Within R-2237B, seven streams (Sites 1, 2, 3, 4, 5, 7, and 8) will be impacted (Table 4). All streams are classified as trout waters (Tr) by DWQ, but are not included on the North

Carolina Wildlife Resource Commission (NCWRC) list of trout water streams. All streams have a sand, gravel and bedrock substrate.

- The stream at Site 1 (Rocky Cove Creek) is 1 to 4 feet wide and 3 inches deep.
- The stream at Sites 2 and 3 (Greenfield Branch) is 2 to 5 feet wide and 2 to 6 inches deep. The stream at Site 4 (Greenfield Branch) is 1 to 3 feet wide and 3 inches deep.
- The stream at Site 5 (UT to Puncheon Camp Creek) is 2 to 4 feet wide and 3 inches deep.
- The stream at Site 7 (UT to Right Fork Mulberry Creek) is 2 to 5 feet wide and 2 inches deep, and is classified as High Quality Waters (HQW) by DWQ.
- The stream at Site 8 (UT to Left Fork Mulberry Creek) is 1.5 to 3 feet wide and 3 inches deep and is classified as High Quality Waters (HQW) by DWQ.

R-2237B will impact a total of 1,680 linear feet of stream channel that will require mitigation. A total of 889 ft of streams will be impacted in the Yadkin Pee-Dee River Basin, HU 03040101. A total of 791 ft of streams will be impacted in the Catawba River Basin, HU 03050101. A total of 30 feet of temporary stream impacts will occur at Sites 2 and 3. Temporary impacts are for surface fill to be placed at the culvert inlet and outlet of Site 2 and the inlet of Site 3 in order to phase construct the culverts.

Table 4. Jurisdictional Stream Information on R-2237B

UTILITY IMPACTS

Two utility companies with aerial power lines are located within the project area. Blue Ridge EMC has power line facilities along the entire length of the project. New pole lines will be constructed to clear the project. The new lines will be within a 30 feet wide easement and will contain 30 new poles. The easement will begin at Station 72 on the west side of the project at the edge of the proposed right-of-way and continue along this alignment to Station 134 at which point it will move further to the west and join with an existing Blue Ridge transmission line easement. The existing Blue Ridge easement is 100 feet wide and extends throughout the remainder of the project. There will be 57 new and/or replacement poles placed within this easement.

BellSouth also has multiple facilities along the entire length of the project. BellSouth will attach telephone lines for joint use on the Blue Ridge pole line described above. No utility impacts to jurisdictional waters or wetlands are anticipated.

PROTECTED SPECIES

Plants and animals with federal classification of Endangered (E), Threatened (T), Proposed Endangered (PE), and Proposed Threatened (PT) are protected under provisions of Section 7 and Section 9 of the Endangered Species Act of 1973, as amended. The January 29, 2003 USFWS lists three federally protected species for Caldwell County: the spruce fir moss spider (*Microhexura montivaga)*, dwarf-flowered heartleaf (*Hexastylis naniflora)*, and Heller's blazing star (*Liatris helleri)* (Table 5). The 1992 USFWS list for Caldwell County included in Appendix B of the EA lists Spreading avens (*Geum radiatum*) and Blue Ridge goldenrod (*Solidago spithamaea*) as protected species, but these have since been removed. The spruce-fir moss spider (*Microhexura montivaga),* listed as proposed endangered in Caldwell County on January 27, 1994, was added to the list of federally protected species included in the FONSI dated September 1994.

Table 5. Federally Protected Species for Caldwell County

Scientific Name	Common Name	Status	Biological Conclusion
Microhexura montivaga	spruce-fir moss spider	Endangered	No Effect
Hexastylis naniflora	dwarf-flowered heartleaf	Threatened	May Affect-Not Likely to Adversely Affect
Liatris helleri	Heller's blazing star	Threatened	No Effect

Endangered : a species that is in danger of extinction throughout all or a significant portion of its range.
Threatened : a species that is likely to become an endangered species within the foreseeable future throughout all or a significant portion of its range.

The spruce-fir moss spider received a biological conclusion of "No Effect". There is no habitat for the spruce-fir moss spider in the project study area. No spruce-fir forests occur

within the study area and elevations within the project study area are less than 5,000 feet. Rocks and boulders within the project study area are devoid of moss and lichens. A review of the North Carolina Natural Heritage Program (NCNHP) database on June 24, 2004 revealed no occurrences of the spruce-fir moss spider within the project vicinity.

The dwarf-flowered heartleaf received a biological conclusion of "May Affect-Not Likely to Adversely Affect". A search for dwarf-flowered heartleaf was conducted on May 28-29, 2003. The entire project corridor was walked and potential habitat areas, specifically those with acidic soils and boggy areas next to streams, were surveyed (approximately 70 acres). No dwarf-flowered heartleaf (or any heartleaf with similarities of appearance) was found during the search. A review of the NCNHP database on June 24, 2004 revealed no species occurrences within the project vicinity. Enclosed in this application is a copy of the letter requesting concurrence from USFWS.

Heller's blazing star received a biological conclusion of "No Effect". In 1994 an NCDOT biologist scanned bare, cut rock faces within the project study area for Heller's blazing star. No threatened plants were discovered. A review of the NCNHP database on June 24, 2004 revealed no species occurrences within the project vicinity. The closest known population of Heller's blazing star occurs on the cliffs of Blowing Rock, approximately one mile northwest of the project endpoint. There are no locations that have elevations of greater than 3,500 feet, nor are there areas of extensive rock outcrops within the project study area.

CULTURAL RESOURCES

In a letter dated April 15, 1992 included in Appendix B of the EA, the State Historic Preservation Office (SHPO) concurred that no archeological sites within the project area are eligible for the National Register of Historic Places and requested that no additional surveys be conducted. One architectural site is listed as eligible for listing within the National Registry of Historic Places. The McCaleb Coffey House is located approximately 550 feet west of the existing US 321 right-of-way, along the path of the old Lenoir Blowing Rock Turnpike (SR 1379). NCDOT has completed a plan to landscape the project right-of-way across from the McCaleb Coffey House into the final design. Based on this commitment, the State Historic Preservation Officer concluded in a letter dated May 14, 1993 included in Appendix B of the EA and FONSI, that the preferred alternative will have no adverse effect on the McCaleb Coffey House.

FEMA COMPLIANCE

The project has been coordinated with appropriate state and local officials and the Federal Emergency Management Agency (FEMA) to assure compliance with FEMA, state, and local floodway regulations.

WILD AND SCENIC RIVER SYTEM

The project will not impact waters designated within the Wild and Scenic Rivers System or any rivers included in the list of study rivers (Public Law 90-542, as amended).

MITIGATION OPTIONS

The Corps of Engineers has adopted, through the Council on Environmental Quality (CEQ), a wetland mitigation policy that embraces the concept of "no net loss of wetlands" and sequencing. The purpose of this policy is to restore and maintain the chemical, biological, and physical integrity of the Waters of the United States. Mitigation of wetland and surface water impacts has been defined by the CEQ to include: avoiding impacts, minimizing impacts, rectifying impacts, reducing impacts over time and compensating for impacts (40 CFR 1508.20). Executive Order 11990 (Protection of Wetlands) and Department of Transportation Order 5660.1A (Preservation of the Nations Wetlands), emphasize protection of the functions and values provided by wetlands. These directives require that new construction in wetlands be avoided as much as possible and that all practicable measures are taken to minimize or mitigate impacts to wetlands.

AVOIDANCE AND MINIMIZATION: The NCDOT is committed to incorporating all reasonable and practicable design features to avoid and minimize jurisdictional impacts, and to provide full compensatory mitigation of all remaining, unavoidable jurisdictional impacts. Avoidance measures were taken during the planning and NEPA compliance stages; minimization measures were incorporated as part of the project design. Minimization includes the examination of appropriate and practicable steps to reduce the adverse impacts.

General minimization techniques were implemented as follows:

1. Wetland Impacts: Energy dissipater basins installed at pipe outfalls of filled wetlands.

2. Stream Impacts: NCDOT revised the original alignment to minimize impacts to streams by replacing the s-curves with longer, flatter curves instead of straight tangent sections. In addition, the revised design incorporates retaining walls to minimize impacts of long fill slopes. Baffles will be used to hold the bed in place for any stream with a slope greater than 2%. Construction techniques will be used to minimize the potential for contact between wet concrete and stream water. Energy dissipater structures such as junction boxes or rock splash pads will be incorporated at the outlets of non-jurisdictional streams and energy dissipater basins where feasible and requested on perennial streams.

3. Culverts: All culverts will be extended. Culverts will be cleaned out and the invert adjusted as necessary in order to allow for the unimpeded flow of water. During project design, NCDOT will consider measures for making culverts more attractive to aquatic and terrestrial wildlife passage.

4. Cut slopes: NCDOT will minimize cut slopes to the extent practicable.

5. Pyritic shale: NCDOT completed geotechnical investigations and found no evidence of pyritic shale.

6. Sensitive Watersheds: The NCDOT will comply with regulations for sensitive watersheds as stated in 15A NCAC 04B.0124 and 15A NCAC 04B.0125 to

account for high quality waters and trout waters located within the project area. Stringent erosion and sediment erosion control practices will be used to minimize water quality impacts.

7. NCDOT will minimize wetland disturbances through careful geometric design to minimize clearing and filling at the Yadkin River tributaries.
8. NCDOT will restrict vegetation removal within adjacent natural communities.
9. Retaining walls will be included to avoid major fills in mountainous areas of the project and reduce the amount of impact to adjacent properties.
10. NCDOT will develop an Erosion and Sediment Control Management and Maintenance Plan that complies with the North Carolina Sedimentation Pollution Control Act of 1973 during final design of the project. A soil erosion schedule will be developed that describes the time relationship between the phases of work that must be coordinated to reduce erosion, construction practices and temporary control measures to minimize erosion and a plan for waste disposal. Permanent erosion control work will be incorporated into the project at the earliest practicable time and coordinated with temporary control measures to ensure economical, effective and continuous erosion control. Precautions will be taken to prevent pollution of water bodies.
11. Trees outside the construction limits will be protected from construction activities.
12. Consultations on proposed endangered, threatened and sensitive (PETS) species and land transfers are on going with the National Forest Service and all required coordination will be completed prior to any land transfers.

Site specific minimization techniques were implemented as follows:

Site 1: Baffles buried in natural material to allow for aquatic life movement. An extended wing wall is used as a retaining wall.

Site 2: Culvert extended with a standard box with baffles on the inlet and a bottomless structure on the outlet.

Site 4: No rip-rap placed in stream bed.

Site 5: No rip-rap placed in stream bed. Drop structure installed to reduce the outlet velocity.

Site 6 A/B: Energy dissipater basins installed at pipe outfalls of filled wetlands.

Site 8: No rip-rap placed in stream bed.

Station 290+00: NCDOT will install a retaining wall to protect the wetland located east of US 321 (located outside of proposed right-of-way).

COMPENSATION: The primary emphasis of the compensatory mitigation is to reestablish a condition that would have existed if the project were not built. As previously stated, mitigation is limited to reasonable expenditures and practicable

considerations related to highway operation. Mitigation is generally accomplished through a combination of methods designed to replace wetland functions and values lost as a result of construction of the project. These methods consist of creation of new wetlands from uplands, borrow pits, and other non-wetland areas; restoration of wetlands; and enhancement of existing wetlands. Where such options may not be available, or when existing wetlands and wetland-surface water complexes are considered to be important resources worthy of preservation, consideration is given to preservation as at least one component of a compensatory mitigation proposal.

Based upon the agreements stipulated in the "Memorandum of Agreement Among the North Carolina Department of Environment and Natural Resources, the North Carolina Department of Transportation, and the U.S. Army Corps of Engineers, Wilmington District" (MOA), it is understood that the North Carolina Department of Environment and Natural Resources EEP, will assume responsibility for satisfying the federal Clean Water Act compensatory mitigation requirements for NCDOT projects that are listed in Exhibit 1 of the subject MOA during the EEP transition period which ends on June 30, 2005.

Although the subject project is not listed in Exhibit 1, R-2237B is included on a supplemental project list submitted to EEP. EEP will provide the necessary compensatory mitigation to offset unavoidable impacts to waters that are jurisdictional under the federal Clean Water Act. The offsetting mitigation will derive from an inventory of assets already in existence within the same 8-digit cataloguing unit. The Department has avoided and minimized impacts to jurisdictional resources to the greatest extent possible as described above. The remaining, unavoidable impacts to 889 linear feet of jurisdictional streams and 0.16 acre of non-riverine wetlands in the Yadkin Pee-Dee River Basin HU 03040101 and 791 linear feet of jurisdictional streams in the Catawba River Basin HU 03050101 will be offset by compensatory mitigation provided by the EEP program. Enclosed in this application is a letter to EEP requesting mitigation at a 2:1 ratio for a total of 3,360 feet of stream mitigation and 0.32 acre of non-riverine wetland mitigation.

INDIRECT AND CUMULATIVE IMPACTS

An Indirect and Cumulative Impact Study for R-2237B is under way and is expected to be complete in July of 2004. A copy of this report will be sent to North Carolina Division of Water Quality (NCDWQ) for review once complete. The construction of R-2237B is not expected to result in any indirect or cumulative impacts that will adversely affect water quality.

REGULATORY APPROVALS

Application is hereby made for a Department of the Army Individual 404 Permit as required for the above described activities. We are also hereby requesting a 401 Water Quality Certification from the NCDWQ. In compliance with Section 143-215.3D(e) of the NCAC we will provide $475.00 to act as payment for processing the Section 401 permit application previously noted in this application (see Subject line). We are

providing seven copies of this application to the North Carolina Department of Environment and Natural Resources, NCDWQ, for their review.

It is anticipated that comments from the NCWRC will be required prior to authorization by the Corps of Engineers. By copy of this letter and attachment, NCDOT hereby requests NCWRC review. NCDOT requests that NCWRC forward their comments to the Corps of Engineers.

If you have any questions or need additional information please call Rachelle Beauregard at (919) 715-1383.

Sincerely,

Gregory J. Thorpe, Ph.D.
Environmental Management Director, PDEA

APPLICATION FOR DEPARTMENT OF THE ARMY PERMIT (33 CFR 325)

OMB APPROVAL NO. 0710-003
Expires December 31, 2004

Public reporting burden for this collection of information is estimated to average 10 hours per response, although the majority of applications should require 5 hours or less. This includes the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Department of Defense, Washington Headquarters Service Directorate of Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington, VA 22202-4302; and to the Office of Management and Budget, Paperwork Reduction Project (0710-0003), Washington, DC 20503. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to any penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number. Please DO NOT RETURN your form to either of those addresses. Completed applications must be submitted to the District Engineer having jurisdiction over the location of the proposed activity.

PRIVACY ACT STATEMENT

Authority: Rivers and Harbors Act, Section 10, 33 USC 403: Clean Water Act, Section 404, 33 USC 1344; Marine Protection, Research and Sanctuaries Act, 33 USC 1413, Section 103. Principal Purpose: Information provided on this form will be used in evaluating the application for a permit. Routine Uses: This information may be shared with the Department of Justice and other federal, state, and local government agencies. Submission of requested information is voluntary, however, if information is not provided the permit application cannot be evaluated nor can a permit be issued.

One set of original drawings or good reproducible copies which show the location and character of the proposed activity must be attached to this application (see sample drawings and instructions) and be submitted to the District Engineer having jurisdiction over the location of the proposed activity. An application that is not completed in full will be returned.

NAME, LOCATION, AND DESCRIPTION OR PROJECT OR ACTIVITY

12. PROJECT NAME OR TITLE (see instructions

US 321 Widening from SR 1370 (Kirby Mountain Road) to SR 1500 (Blackberry Road) in Bailey Camp, just north of Patterson, Caldwell County, NC

13. NAME OF WATERBODY, IF KNOWN (if applicable)
Rocky Cove Creek, Greenfield Branch, UT to Puncheon Camp Creek, UT to Right Fork Mulberry Creek, UT to Left Fork Mulberry Creek

14. PROJECT STREET ADDRESS (if applicable)

15. LOCATION OF PROJECT

Caldwell (COUNTY) NC (STATE)

16. OTHER LOCATION DESCRIPTIONS, IF KNOWN (see instructions) **Section, Township, Range, Lat/Lon, and/or Accessors's Parcel Number, for example.**

17. DIRECTIONS TO THE SITE

US 321-from SR 1370, go north 6.5 miles to SR 1500 in Bailey Camp

18. Nature of Activity (Description of project, include all features)

Widening of US 321 from a two-lane facility to a four-lane roadway. The project is 6.5 miles long and will provide four 12-foot lanes with a four-foot painted median and 10-foot shoulders (13 feet with guardrail).). The proposed right-of-way varies throughout the project, ranging from approximately 110 to 885 feet.

Section B of the project will impact five streams through seven stream crossings, impacting 1,080 linear feet of jurisdictional perennial streams and 600 linear feet of intermittent streams. The project will also impact 0.16 acre of wetlands and 0.13 acre of surface waters.

19. Project Purpose (Describe the reason or purpose of the project, see instructions)

Public transportation. The purpose of the project is to increase traffic capacity and safety by widening the roadway. US 321is listed in the draft 2004-2010 North Carolina Transportation Improvement Program

USE BLOCKS 20-22 IF DREDGED AND/OR FILL MATERIAL IS TO BE DISCHARGED

20. Reason(s) for Discharge

Needed in order to provide a wider road base for the highway widening.

21. Type(s) of Material Being Discharged and the Amount of Each Type in Cubic Yards

See attached permit drawings.

22. Surface Area in Acres of Wetlands or Other Waters Filled (see instructions)

1,680 linear feet of stream channel, 0.13 ac of surface water, and 0.16 acre of wetland

23. Is Any Portion of the Work Already Complete? Yes ___ No _X_ IF YES, DESCRIBE THE COMPLETED WORK

24. Addresses of Adjoining Property Owners, Lessees, Etc., Whose Property Adjoins the Waterbody (If more than can be entered here, please attach a supplemental list).

See Attached List

25. List of Other Certifications or Approvals/Denials Received from other Federal, State, or Local Agencies for Work Described in This Application.

AGENCY	TYPE APPROVAL*	IDENTIFICATION NUMBER	DATE APPLIED	DATE APPROVED	DATE DENIED

* Would include but is not restricted to zoning, building, and flood plain permits

26. Application is hereby made for a permit or permits to authorize the work described in this application. I certify that the information in this application is complete and accurate. I further certify that I possess the authority to undertake the work described herein or am acting as the duly authorized agent of the applicant.

SIGNATURE OF APPLICANT	DATE	SIGNATURE OF AGENT	DATE
[signature]	7/21/04		

The application must be signed by the person who desires to undertake the proposed activity (applicant) or it may be signed by a duly authorized agent if the statement in block 11 has been filled out and signed.

18 U.S.C. Section 1001 provides that: Whoever, in any manner within the jurisdiction of any department or agency of the United States knowingly and willfully falsifies, conceals, or covers up any trick, scheme, or disguises a material fact or makes any false, fictitious or fraudulent statements or representations or makes or uses any false writing or document knowing same to contain any false, fictitious or fraudulent statements or entry, shall be fined not more than $10,000 or imprisoned not more than five years or both.

 8/21/03

March 31, 2003

Subject: Draft Minutes Interagency Hydraulic Design 4C Review Meeting on March 27, 2003 for R-2237B, Caldwell County.

Team Members:
John Thomas – USACE (Absent)
Cynthia Van Der Wiele – NCDWQ (Present)
Marla Chambers – NCWRC (Present)
Marella Buncick – USFWS (Absent)
Chris Militscher – EPA (Absent)
Heather Montague – NCDOT PDEA (Present)

Participants:
David Chang – NCDOT Hydraulics
Beth Barnes– NCDWQ
Greg Kempf – HDR
Jamie Byrd – Transite Engineering
Tony Davis – NCDOT Structures
Anne Gamber – NCDOT Hydraulics

This project consists of the widening and realigning of US-321 in Caldwell County. A recent natural system survey of streams was completed and provided to Transite. Jamie Byrd began the meeting by describing the project and stating that due to the topography the use of swales was limited.

1. Trout Streams: Cynthia Van Der Wiele stated that all streams were trout waters, this was not indicated in the environmental documents previously submitted to Transite. Retaining walls were used to avoid impacts to the streams. Transite would review all streams to reduce impacts to the trout stream buffer.
2. Construction in Stream: NCDWQ expressed concern over the method of construction in the trout streams. They requested that no wet concrete is allowed in stream and that machinery be well maintained and kept out of live stream. Transite and NCDOT Hydraulics agreed to this.
3. Culvert #1 Rocky Cove Creek: Baffles are use to hold silt. The baffles are buried in natural material to allow for aquatic life movement. An extended wing wall is used as retaining wall. The Division Construction Engineer will be consulted as to type of wall required.
4. Culvert #2 Greenfield Branch: A discussion over the practicability of directly outletting into culvert and reduce impact to trout stream buffer was debated. It was determined that since the rip rap at the end of the culvert was needed the reduction in buffer impact was insignificant.
5. Drop Structure/Energy Dissipater: It was agreed that an energy dissipater would be used at the outlet of the pipe at station 115+50. A drop structure would be used in the system on sheet 13 to reduce the outlet velocity.
6. Pocket Wetlands: The two pocket wetlands on Sheet 14 were reviewed to determine if the impacts would be "grandfathered". The dateline had been past by the date of 30% completion.

The meeting was adjourned at 3:15.

November 24, 2003

Subject: Draft Minutes Interagency Permit Drawing Review Meeting on November 20, 2003, for R-2237B in Caldwell County.

Team Members:

John Thomas – USACE	(Absent)
Cynthia Van Der Wier – NCDWQ	(Present)
Marla Chambers – NCWRC	(Present)
Marella Buncick – USFWS	(Present)
Christopher Militscher – USEPA	(Present)
Elizabeth Lusk – NCDOT ONE	(Present)

Participants:
Marshall Clawson – NCDOT Hydraulics
James A. Byrd – Transite Consulting
Pete Colwell – Stantec Consulting
Doug Taylor – NCDOT Design Services /Roadway
Alan Ray – NCDOT Design Services /Roadway
Dan Duffield – NCDOT Hydraulics
John Frye – NCDOT Structures Unit
Brian Hanks – NCDOT Structures Unit

Site 2 Sheet 10

Marella- Does the culvert have sill in it?

DOT's response: - The existing culvert may be bottomless. Until this is confirmed the current design is the have a culvert extension at the inlet end with sills and more than likely a bottomless extension at the outlet end.

General Comments at the end of the meeting

Marla – Has the alignment be adjust to less the impacts to the streams?

DOT's response: – Yes, the alignment has been revised (from the original design) to minimize impacts. The s – curves have been replaced with longer flatter curves instead of straight tangent sections. Also, a large amount of retaining walls have been utilized to less impacts that would have been caused from long fill slopes.

Chris – Have the large cut slopes been minimized?

DOT's response: – YES, all cuts were minimized to the extent practicable, steepening slopes where allowed by the Geotech Unit causing rock catchment areas to be added and thus caused a decrease in the footprint.

Copies of John Thomas' entire e-mail were handed out to all the Team Members stating that he confirmed the jurisdictional determinations conducted by the consultants Stantec and also that he had concerns about the 600 +/- linear feet of jurisdictional stream channel impacts that are in the areas where the s-curves are located.

DOT's response: Just to reiterate, yes, the alignment has been revised (from the original design) to minimize impacts. The s – curves have been replaced with longer flatter curves instead of straight tangent sections. Also, a large amount of retaining walls have been utilized to less impacts that would have been caused from long fill slopes.

The meeting was adjourned.

SECRETARY

July 14, 2004

Mr. Brian Cole
US Fish and Wildlife Service
160 Zillicoa Street
Asheville, NC 28801

Dear Mr. Cole:

This letter is in reference to NCDOT's proposed US 321 widening project from SR 1370 (Kirby Mountain Road) to SR 1500 (Blackberry Road) in Bailey Camp in Caldwell County, TIP No. R-2237B. The purpose of this letter is to request concurrence from the U.S. Fish and Wildlife Service pursuant to Section 7 of the Endangered Species Act, as amended (16 U.S.C. 1531 *et seq.*) (ESA).

Please see the attached document concerning the latest survey report for R-2237B. Based on the information in the attached survey reports, NCDOT concludes that the proposed project's Biological Conclusions for the dwarf-flowered heartleaf (*Hexastylis naniflora*) is "May Affect-Not Likely to Adversely Affect". The Biological Conclusion for the spruce-fir moss spider (*Microhexura montivaga*) and Heller's blazing star (*Liatris helleri*) is "No Effect". We believe that the requirements of Section 7(a)(2) of the ESA have been satisfied and hereby request your concurrence.

If you have any questions, please contact Rachelle Beauregard at rbeauregard@dot.state.nc.us or (919) 715-1383.

Sincerely,

for Phillip S. Harris, III, P.E., Manager

July 14, 2004

Mr. William D. Gilmore, P.E.
EEP Transition Manager
Ecosystem Enhancement Program
1652 Mail Service Center
Raleigh, NC 27699-1652

Subject: US 321 Widening From SR 1370 (Kirby Mountain Road) to SR 1500 (Blackberry Road) in Bailey Camp. Caldwell County. TIP No. R-2237B.

Dear Sir:

The purpose of this letter is to request that the North Carolina Ecosystem Enhancement Program (EEP) provide confirmation that you are willing to provide compensatory mitigation for the project in accordance with the Memorandum of Agreement (MOA) signed July 22, 2003 by the USACE, the NCDENR and the NCDOT.

The North Carolina Department of Transportation (NCDOT), Division of Highways, in consultation with the Federal Highway Administration (FHWA) proposes to widen US 321 in Caldwell County, from SR 1370 (Kirby Mountain Road) just north of Patterson to SR 1500 (Blackberry Road) in Bailey Camp. The location of the two additional lanes varies from the east to the west side of the existing roadway depending upon the location of existing development, natural and historic resources, severity of terrain, and design objectives. The proposed project is approximately 6.5 miles in length, and will provide four 12-foot lanes with a four-foot painted median and 10-foot shoulders (13 feet with guardrail). The proposed right-of-way varies throughout the project, ranging from just over approximately 110 to 885 feet.

RESOURCES UNDER THE JURISDICTION OF SECTION 404 AND 401 OF THE CLEAN WATER ACT.

We have avoided and minimized the impacts to jurisdictional resources to the greatest extent possible as described in the permit application. A copy of the permit application can be found at http://www.ncdot.org/planning/pe/naturalunit/Applications.html. The remaining impacts to jurisdictional resources will be compensated for by mitigation provided by the EEP program. We estimate that 1,080 linear feet of jurisdictional perennial streams, 600 linear feet of intermittent streams, 0.16 acre of wetlands, and 0.13 acre of surface water will be impacted.

The project is located in the Blue Ridge Physiographic Province in Caldwell County in the Yadkin-Pee Dee River basin in Hydrological Cataloguing Unit 03040101and the Catawba River Basin in Hydrologic Cataloguing Unit 03050101.

The following impacts occur in Hydrologic Cataloguing Unit 03040101:

- Stream impacts in Hydrologic Cataloguing Unit 03040101 total 889 linear feet. Impacts will occur to Rocky Cove Creek [DWQ Index No. 12-12-1], a first order perennial stream; Greenfield Branch (DWQ Index No. 12-12-1-1), a second order perennial stream; and a first order perennial stream that is a tributary to Puncheon Camp Creek (DWQ Index No. 12-12-1).

- Wetland impacts will occur to 0.16 acre of non-riverine Palustrine, Unconsolidated Bottom, Semi-Permanently Flooded, Diked/Impounded (PUBAh) wetlands as classified by Cowardin et al. (1979). The wetlands are located within a powerline corridor surrounded by a Mesic Mixed Forest community.

The following impacts occur in Hydrological Cataloguing Unit 03050101:

- Stream impacts in Hydrologic Cataloguing Unit 03050101 total 791 linear feet. Impacts will occur to a first order perennial stream that is a tributary to the Right Fork of Mulberry Creek (DWQ Index No. 11-38-32-3) and a first order intermittent stream that is a tributary to the Left Fork of Mulberry Creek (DWQ Index No. 11-38-32-2).

Stream and wetland impacts are summarized in Table 1 with the amount of need mitigation. We propose to use the EEP to mitigate for all impacts at a 2:1 ratio. Needed mitigation in Yadkin Pee-Dee River Basin, HU 03040101 are 1778 ft of streams and 0.32 ac of non-riverine wetlands. Needed mitigation in the Catawba River Basin, HU 03050101 are 1582 ft of streams.

Table 1: Summary of Jurisdictional Impacts and Needed Mitigation

Hydrologic Cataloguing Unit	Permanent Non-Riverine Wetland Impacts	Needed Mitigation	Streams Impacts	Needed Mitigation
03040101	0.16 ac	0.32 ac	889 ft	1778 ft
03050101	0.0	0.0	791 ft	1582 ft

Please send the letter of confirmation to John Thomas (USACE Coordinator) at U. S. Army Corps of Engineers, Raleigh Regulatory Field Office, 6508 Falls of Neuse Road, Suite 120, Raleigh, NC 27615). Mr. Thomas's FAX number is (919) 876-5823. The current let date for the project is December 21, 2004 for which the let review date is November 2, 2004.

If you have any questions or need additional information please call Ms. Rachelle Beauregard at 919-715-1383.

Sincerely,

Gregory J. Thorpe, Ph.D.
Environmental Management Director

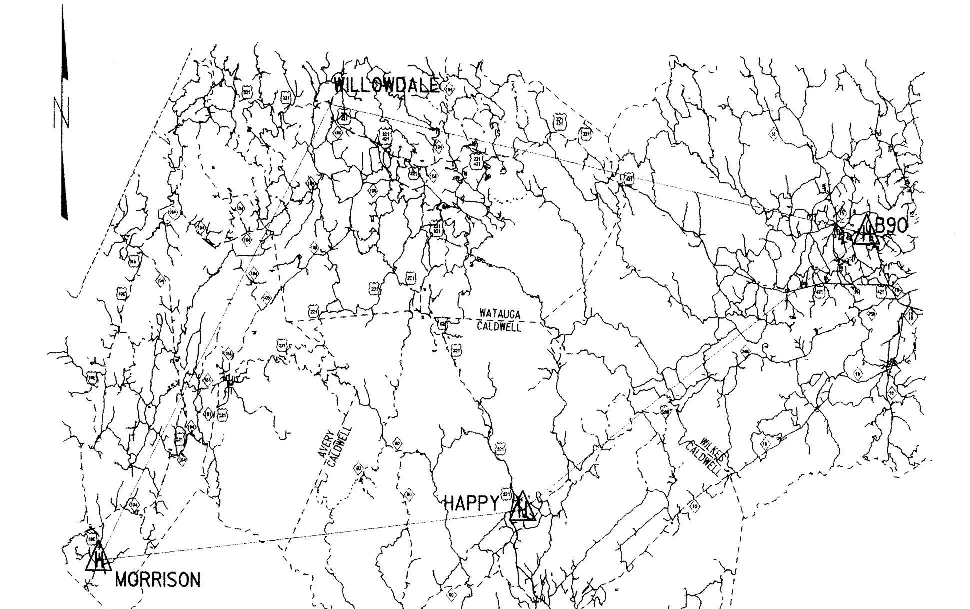
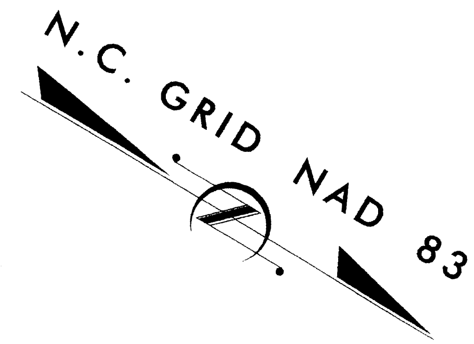
SURVEY CONTROL SHEET



GPS CONTROL NETWORK

NOT TO SCALE



NOTES

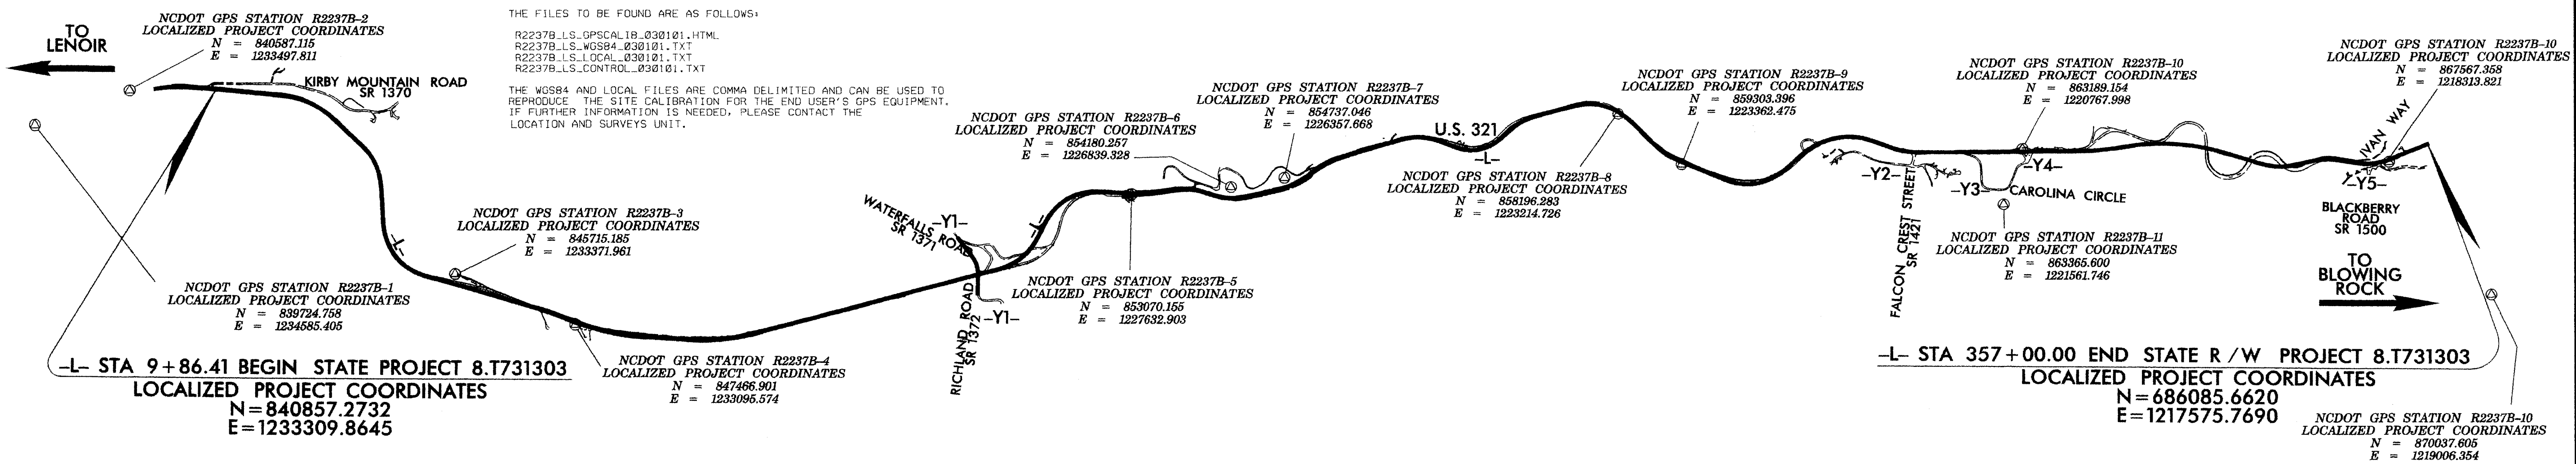
1. THE SITE CALIBRATION SHOWN IS BASED UPON A NETWORK TIED TO THE NAD 83 ADJUSTMENT. THIS CALIBRATION WILL ALLOW THE END USER TO WORK WITHIN THE SAME COORDINATE SYSTEM WHEN USING RTK (REAL TIME KINEMATIC) GPS AND A LOCAL BASE STATION. IF ANOTHER SYSTEM SUCH AS VRS (VIRTUAL REFERENCE STATION) IS USED. ADDITIONAL FIELD TIES MAYBE NEEDED TO REDUCE POSSIBLE ERRORS. OR BIASES.

2. THE CONTROL DATA FOR THIS PROJECT CAN BE FOUND ELECTRONICALLY BY SELECTING PROJECT CONTROL DATA AT HTTP://WWW.DOH.DOT.STATE.NC.US/PRECONSTRUCT/HIGHWAY/LOCATION/PROJECT/

   THE FILES TO BE FOUND ARE AS FOLLOWS:

   R2237B_LS_GPSCALIB_030101.HTML
   R2237B_LS_WGS84_030101.TXT
   R2237B_LS_LOCAL_030101.TXT
   R2237B_LS_CONTROL_030101.TXT

   THE WGS84 AND LOCAL FILES ARE COMMA DELIMITED AND CAN BE USED TO REPRODUCE THE SITE CALIBRATION FOR THE END USER'S GPS EQUIPMENT. IF FURTHER INFORMATION IS NEEDED, PLEASE CONTACT THE LOCATION AND SURVEYS UNIT.



DATUM DESCRIPTION

THE LOCALIZED COORDINATE SYSTEM DEVELOPED FOR THIS PROJECT IS BASED ON THE STATE PLANE COORDINATES ESTABLISHED BY NCDOT FOR MONUMENT "R2237B-6"
WITH NAD 83 STATE PLANE GRID COORDINATES OF
NORTHING: 854180.257(ft) EASTING: 1226839.328(ft)
THE AVERAGE COMBINED GRID FACTOR USED ON THIS PROJECT (GROUND TO GRID) IS: .999908500
THE N.C. LAMBERT GRID BEARING AND LOCALIZED HORIZONTAL GROUND DISTANCE FROM "R2237B-6" TO -L- STATION 9+86.41 IS
S 25°54'16" E 14811.13'
ALL LINEAR DIMENSIONS ARE LOCALIZED HORIZONTAL DISTANCES
VERTICAL DATUM USED IS NGVD 29

⊚ INDICATES GEODETIC CONTROL MONUMENTS USED OR SET FOR HORIZONTAL PROJECT CONTROL BY THE NCDOT LOCATION AND SURVEYS UNIT.

PROJECT CONTROL ESTABLISHED UTILIZING GLOBAL POSITIONING SYSTEM.

NETWORK ESTABLISHED FROM EXISTING NCGS AND NC DOT MONUMENTATION.

SEE GPS CALIBRATION SHEET FOR HORIZONTAL AND VERTICAL COORDINATE VALUES

NOTE: DRAWING NOT TO SCALE

SURVEY CONTROL SHEET R-2237B

GPS CALIBRATION REPORT

PROJECT : R2237B

TIP NUMBER	R-2237B		
USER NAME	RGMILLER	DATE & TIME	2:02:18 PM 7/29/2003
COORDINATE SYSTEM	US STATE PLANE 1983(AT GROUND)	ZONE	NORTH CAROLINA 3200
HORIZONTAL DATUM	NAD 1983 (CONUS)		
VERTICAL DATUM	NGVD 29	GEOID MODEL	GEOID99 (CONUS)
COORDINATE UNITS	US SURVEY FEET		
DISTANCE UNITS	US SURVEY FEET		
HEIGHT UNITS	US SURVEY FEET		

LOCAL SITE INFORMATION
LOCALIZED AROUND

LATITUDE	36°04′08.15088"N
LONGITUDE	81°36′58.81643"W
SITE SCALE FACTOR	1.0000915100

THE NORTH CAROLINA DEPARTMENT OF TRANSPORTATION USES A LOCALIZED COORDINATE SYSTEM
WHICH IS VERY SIMILAR TO NORTH CAROLINA ZONE 3200 FROM WHICH IT IS DERIVED.
PLEASE TAKE CARE IN UTILIZING THESE COORDINATES TO ELIMINATE CONFUSION OF THE TWO SYSTEMS.
THIS FILE IS TO AID IN THE USE OF REAL TIME KINEMATIC (RTK) GPS DURING CONSTRUCTION LAYOUT.

DATUM DESCRIPTION

THE LOCALIZED COORDINATE SYSTEM DEVELOPED FOR THIS PROJECT IS BASED ON THE STATE PLANE COORDINATES ESTABLISHED BY NCDOT FOR MONUMENT "R2237B-6"
WITH NAD 83 STATE PLANE GRID COORDINATES OF
NORTHING: 854180.257(ft) EASTING: 1226839.328(ft)
THE AVERAGE COMBINED GRID FACTOR USED ON THIS PROJECT (GROUND TO GRID) IS: .999908500
THE N.C. LAMBERT GRID BEARING AND LOCALIZED HORIZONTAL GROUND DISTANCE FROM "R2237B-6" TO -L- STATION 9+86.41 IS
S 25°54′16" E 14,811.13′
ALL LINEAR DIMENSIONS ARE LOCALIZED HORIZONTAL DISTANCES
VERTICAL DATUM USED IS NGVD 29

NOTES

1. THE SITE CALIBRATION SHOWN IS BASED UPON A NETWORK TIED TO THE NAD 83 ADJUSTMENT. THIS CALIBRATION WILL ALLOW THE END USER TO WORK WITHIN THE SAME COORDINATE SYSTEM WHEN USING RTK (REAL TIME KINEMATIC) GPS AND A LOCAL BASE STATION. IF ANOTHER SYSTEM SUCH AS VRS (VIRTUAL REFERENCE STATION) IS USED, ADDITIONAL FIELD TIES MAYBE NEEDED TO REDUCE POSSIBLE ERRORS, OR BIASES.

2. THE CONTROL DATA FOR THIS PROJECT CAN BE FOUND ELECTRONICALLY BY SELECTING PROJECT CONTROL DATA AT HTTP://WWW.DOH.DOT.STATE.NC.US/PRECONSTRUCT/HIGHWAY/LOCATION/PROJECT/

   THE FILES TO BE FOUND ARE AS FOLLOWS:

   R2237B_LS_GPSCALIB_030101.HTML
   R2237B_LS_WGS84_030101.TXT
   R2237B_LS_LOCAL_030101.TXT
   R2237B_LS_CONTROL_030101.TXT

   THE WGS84 AND LOCAL FILES ARE COMMA DELIMITED AND CAN BE USED TO REPRODUCE THE SITE CALIBRATION FOR THE END USER'S GPS EQUIPMENT. IF FURTHER INFORMATION IS NEEDED, PLEASE CONTACT THE LOCATION AND SURVEYS UNIT.

DATUM DESCRIPTION

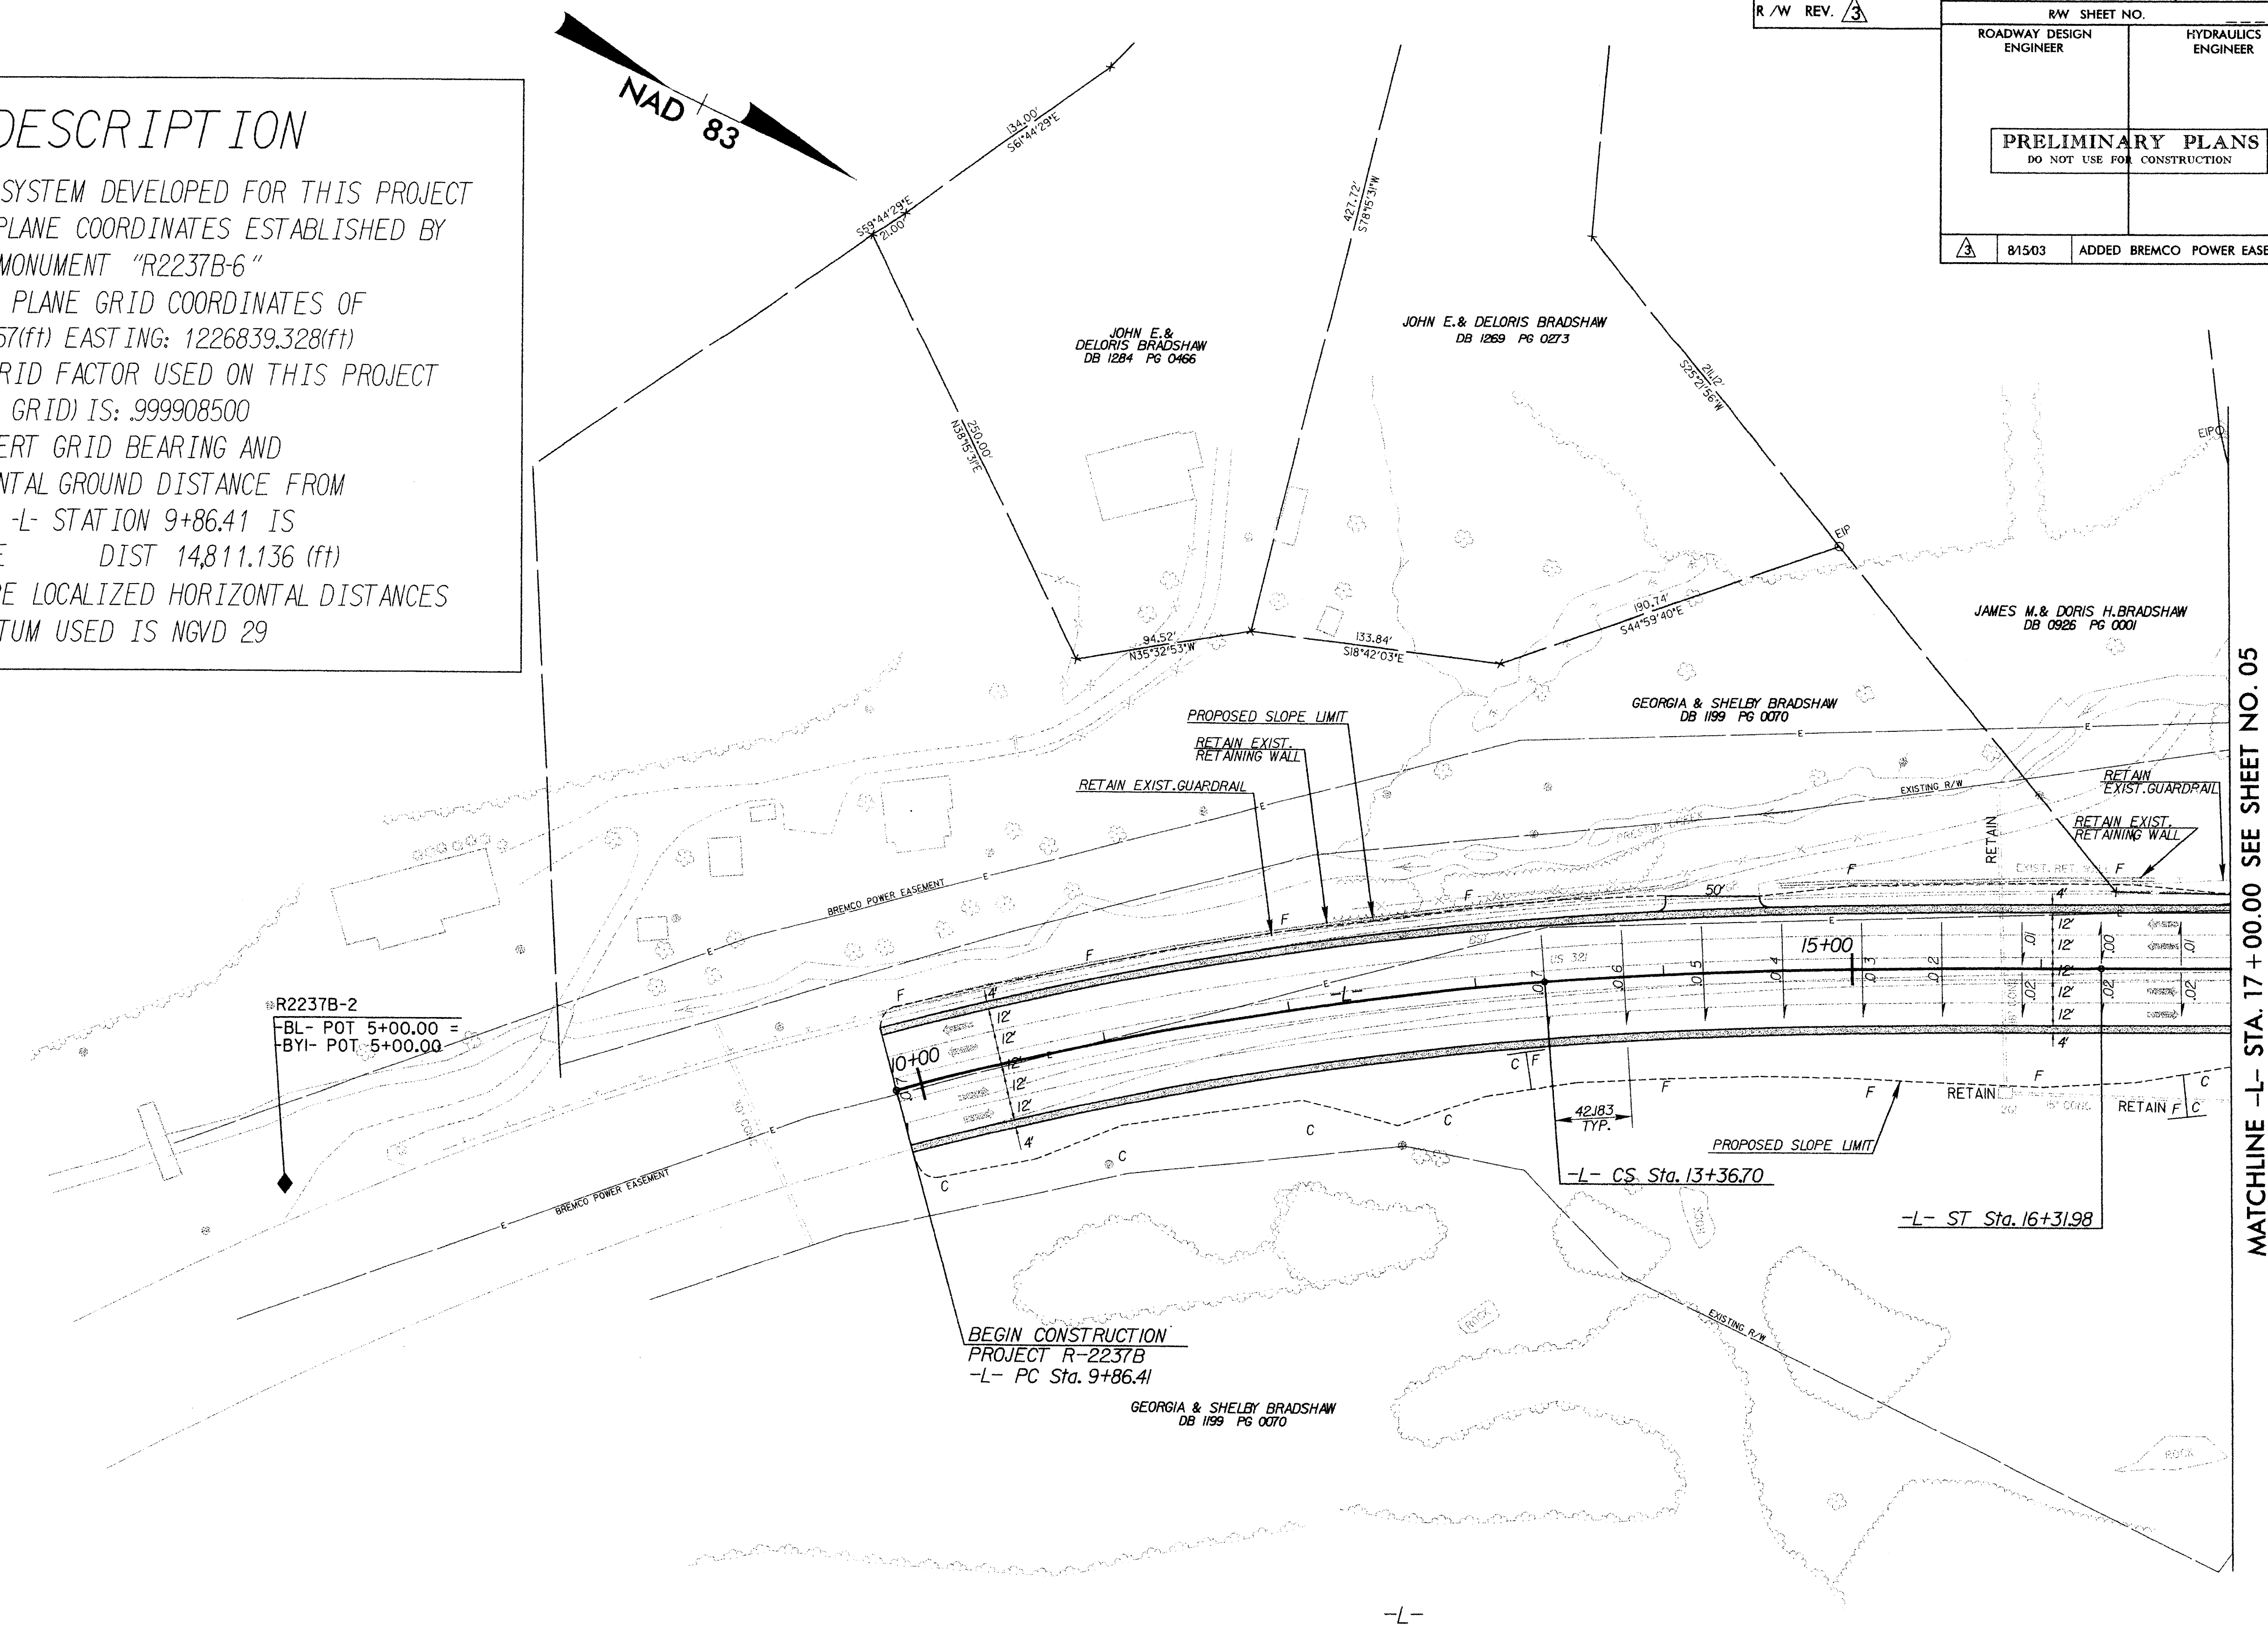
THE LOCALIZED COORDINATE SYSTEM DEVELOPED FOR THIS PROJECT
IS BASED ON THE STATE PLANE COORDINATES ESTABLISHED BY
NCDOT FOR MONUMENT "R2237B-6"
WITH NAD 83 STATE PLANE GRID COORDINATES OF
NORTHING: 854180.257(ft) EASTING: 1226839.328(ft)
THE AVERAGE COMBINED GRID FACTOR USED ON THIS PROJECT
(GROUND TO GRID) IS: .999908500
THE N.C. LAMBERT GRID BEARING AND
LOCALIZED HORIZONTAL GROUND DISTANCE FROM
"R2237B-6" TO -L- STATION 9+86.41 IS
S 25° 54' 15.57" E DIST 14,811.136 (ft)
ALL LINEAR DIMENSIONS ARE LOCALIZED HORIZONTAL DISTANCES
VERTICAL DATUM USED IS NGVD 29



MATCHLINE -L- STA. 17+00.00 SEE SHEET NO. 05
