U.S. Army Corps of Engineers
Washington Regulatory Field Office
Post Office Box 1000
Washington, NC 27889-1000

Attention: Mr. William Wescott, NCDOT Coordinator

Subject: **Application for Section 404 Nationwide Permit Numbers 14 and 33, Section 401 Water Quality Certification, and Neuse Riparian Buffer Authorization** for Improvements to US 17 from Mills Street in Bridgeton to North of SR 1433 (Antioch Road), Craven County. State Project: 8.117601. Federal Aid Project: STPNHF-17(24). TIP: R-3403A. Debit $570 from WBS 34538.1.1

The North Carolina Department of Transportation (NCDOT), Division of Highways, in consultation with the Federal Highway Administration (FHWA), proposes to widen US 17 to a multi-lane facility from Mills Street in Bridgeton to North of SR 1433 (Antioch Road) in Craven County. The length of the proposed project (R-3403A) is approximately 2.9 miles (see Permit Drawings, enclosed). The project has been separated into two sections, A & B, due to differences in proposed construction dates. Section A begins at Mills Street in Bridgeton and ends north (of the southernmost intersection) of SR 1433 (Antioch Road); section B starts there and continues to north of NC 43.

The purpose of this letter is to request approval for the United States Army Corps of Engineers (USACE) Section 404 NW 14 & 33 permits and Section 401 Water Quality Certification and Neuse Riparian Buffer authorization from the North Carolina Division of Water Quality (NCDWQ) for Project R-3403A. Public Notice for projects R-3403A and B was published on May 4, 2004, and assigned Action ID 200411285 by USACE.

In addition to the cover letter and PCN Form, this application package includes the following: permit drawings, riparian buffer drawings, a set of half-size roadway plans, EEP acceptance letter, and 4A and 4C meeting minutes.

Purpose and Need

The purpose and need for this project, as identified in the 2002 Environmental Assessment (EA), is to improve safety, increase traffic capacity to meet projected transportation needs, and reduce travel times. The 1992 New Bern-Bridgeton-Trent Woods-River Bend Urban Thoroughfare Plan classifies US 17 as an Urban Major Thoroughfare from Mills Street in Bridgeton to approximately 1.5 miles north of Antioch Road. This project addresses an important regional transportation need to improve traffic flow in the US 17 corridor that accesses the Cherry Point Marine Base and the Atlantic coast. The purpose of the project is to alleviate congestion and improve the level of service along US 17, and by doing so, improve the safety of the route. US 17 currently operates at Level of Service (LOS) "D", and these

RALEIGH, NC 27604

conditions will become worse as traffic volumes are forecast to increase in the future. Providing additional traffic-carrying capacity will improve the operation of US 17 as a hurricane evacuation route.

Project Description

The project widens US 17 symmetrically about the existing centerline, from Mills Street to Pine Street. From Pine Street to south of B Street (SR 1602), the proposed 4-lane divided highway shifts west of the existing US 17 centerline. The project intersects the Norfolk Southern Railway in Bridgeton at grade. The existing right-of-way is 150-feet wide and is offset to the east of the US 17 centerline from Mills Street to B Street. From B Street to Antioch Road, the right-of-way is offset to the west. With the exception of buying temporary construction easements, NCDOT proposes to locate the improved facility within the current 150-foot corridor.

The project has a "best fit" alignment that avoids the Bridgeton Historic District west of US 17 and the Encee Chemical Sales Company located south of the railroad crossing. By avoiding this company's property while providing a 60-mph design speed, this alignment will impact several residences and businesses west of US 17 and north of the railroad tracks.

The project has been further divided into sections AA and AB. The AA section begins at Mill Street and continues to the Norfolk Southern Railway. The AB section begins there and ends north of Antioch Road.

Summary of Impacts

Waters of the U.S.: Proposed impacts to jurisdictional areas of R-3403A total 0.14 acre of permanent riparian wetland impacts, 0.79 acre of permanent non-riparian wetland impacts, 0.13 acre of 401 isolated wetland impacts and 443 linear feet of permanent stream impacts. See Table 1 for the permanent and temporary impact summary for all sites.

Neuse Riparian Buffers: There are mitigable impacts proposed to 13,390 square feet and allowable impacts to 12,759 square feet of Neuse River basin riparian buffer for R-3403A (see Table 2).

Summary of Mitigation

The NCDOT has avoided and minimized impacts to jurisdictional resources to the greatest extent practicable as described above. The unavoidable impacts to jurisdictional wetlands, streams, and riparian buffer will be offset by compensatory mitigation provided by NC Ecosystem Enhancement Program (EEP).

Project Schedule

Construction of this project is divided into two sections (A and B). Only the A section is included in this permit application. The Let date for R-3403A is December 16, 2008. The Let date for R-3403B is currently scheduled for March 2, 2020. Due to the amount of time between lettings, an application for R-3403B will be submitted at a later date. The attached permit drawings are final in detailing all proposed impacts occurring within Project R-3403A.

NEPA Document Status

This project has been developed through the NEPA/404 merger process. The project was added in June 1995 for inclusion in the 1996-2002 Transportation Improvement Plan (TIP). Concurrence Points 1 (Purpose and Need) and 2 (Alternatives for Study) were approved on October 1, 1999 and June 14, 2001, respectively. The EA was signed June 3, 2002. Concurrence Point 2A (Bridging Decisions and Final Alternatives to Carry Forward) was approved on January 3, 2003. Concurrence Point 3 (Least Environmentally Damaging Practicable Alternative (LEDPA)) and 4A (Avoidance and Minimization)

were both approved on September 9, 2004. Concurrence Point 4C for Project R-3403A was completed on December 13, 2006, and the final field review was held on February 27, 2008.

Independent Utility

R-3403A is in compliance with 23 CFR Part 771.111(f), which lists the FHWA characteristics of the independent utility of a project. The project meets the criteria for independent utility as discussed below:

- The project has logical termini and independent utility and is of sufficient length to address environmental matters on a broad scope;
- The project is usable and a reasonable expenditure of funds, even if no additional transportation improvements are made in the area; and
- The project does not restrict consideration of alternatives for other reasonably foreseeable transportation improvements.

Resource Status

The project study area is located in the Neuse River Basin within the North Carolina Division of Water Quality (NCDWQ) sub-basin 03-04-10 and within the United States Geological Survey (USGS) eight-digit Cataloging Unit 03020204. Surface waters within the project study area are classified as "C", "SC", and "SW". The impacts are located in an unnamed tributary to the Neuse River and an unnamed tributary to Mills Branch.

Jurisdictional Delineation

Wetland and stream identification and preliminary assessment analysis for the study area were performed in 1999, reported in the Natural Resources Technical Report (NRTR), and summarized in the EA for this project. The wetlands and streams within the project study area were delineated based on the 1987 USACE Wetland Delineation Manual and the preliminary design was prepared to avoid and minimize impacts to the extent practicable. Jurisdictional areas were verified in the field by USACE representative Mike Bell on February 21, 2001 and R-3403A wetlands were re-verified in the field on March 5, 2008 by USACE representative William Wescott. Verified jurisdictional wetlands and streams are depicted on the enclosed Permit Drawings.

Characterization of Jurisdictional Sites

Wetlands and streams were described in the NRTR and EA completed for this project as follows:

Wetlands

The EA describes the wetlands occurring in Project R-3403A as "Depressional Wetlands" as follows: "This community is located throughout the project, between areas developed for agriculture and residential/commercial uses. It is also found in the area between US 17 and the railroad tracks, which parallel the road for much of the project length. It is composed of a mosaic of small upland areas interspersed among wet depressions and canebrake areas."

Streams

As part of the 1999 assessment for the NRTR, stream reaches falling within the study corridor of the Preferred Alternative were identified and assessed. This assessment was reported in the NRTR and summarized in the EA as "channelized" with "sand-substrate" and "some flow".

Jurisdictional Resources

Estimated impacts to jurisdictional areas (as shown on the Wetland Permit Impact Summary sheet, enclosed, and in Table 1) are the result of minimization and avoidance measures and represent the final impacts foreseen at this time. Section AA sites include A1-A2 and Section AB sites include B1-B9.

Table 1. Summary of Wetland and Stream Impacts for R-3403A

Site	**Wetland Impacts** (acres)		**Stream Impacts** (linear feet)	
	Permanent	**Temporary**	**Permanent**	**Temporary**
A1	0.04	0.00	0	0
A2	0.23	0.00	0	0
B1+	0.05	0.00	72	80
B2*	0.02	0.00	0	0
B3+	0.09	0.00	105	61
B5	0.04	0.00	0	0
B7	0.48	0.00	0	0
B8	0.00	0.00	266	95
B9*	0.11	0.00	0	0
Total:	1.06	0.00	443	236

*denotes 401 isolated wetlands
+denotes riparian wetlands

Permanent Impacts: Proposed permanent impacts include fill, excavation, and mechanized clearing in wetlands. The total permanent wetland impacts are 0.93 acre. Proposed permanent impacts due to fill in surface waters are 443 linear feet (0.07 acre). Impacts for isolated wetlands are 0.13 acre (see Wetland Permit Impact Summary, enclosed).

Temporary Impacts: Proposed temporary impacts to 0.07 acre of wetlands due to temporary fill in wetlands in the hand clearing areas for the installation of erosion control measures, including Temporary Silt Fence and/or Special Sediment Control Fence. Proposed temporary fill in surface waters is 0.04 acre (236 linear feet).

Hand Clearing: There will be 0.14 acre of hand clearing in riparian wetlands and 0.22 in non-riparian wetlands due to project construction.

Riparian Buffer Impacts: There are mitigable impacts proposed to 13,390 square feet (at Site B3) and allowable impacts to 12,759 square feet (at Site B1) of Neuse River basin riparian buffer for R-3403A (see Table 2 and Buffer Impacts Summary, enclosed). There are 9,175 square feet of buffer impacts at Sites B1 and B3, which are in jurisdictional wetlands.

Utility Impacts: There will be 0.42 acre of hand clearing for aerial power lines.

Table 2. Summary of Buffer Impacts for R-3403A

Site	**Total Buffer Impact** (ft^2)			**Wetland Impact Within Buffer** (ft^2)			**Buffer Requiring Mitigation** (ft^2)		
	Zone 1	**Zone 2**	**Total**	**Zone 1**	**Zone 2**	**Total**	**Zone 1**	**Zone 2**	**Total**
B1	7,913	4,846	12,759	2,747	1,145	3,892	N/A	N/A	N/A
B3	8,264	5,126	13,390	4,602	681	5,283	8,264	5,126	13,390
Total:	16,177	9,972	26,149	7,349	1,826	9,175	8,264	5,126	13,390

Wetlands

Roadway impacts proposed at Site A1 involve 0.02 acre of permanent fill and 0.02 acre of mechanized clearing for a total 0.04 acre within depressional wetlands. Roadway impacts at Site A2 involve 0.14 acre of permanent fill and 0.09 acre of mechanized clearing for a total 0.23 acre.

Extension of the 6-foot by 6-foot Reinforced Concrete Box Culvert (RCBC) proposed at Site B1 involves 0.05 acre of permanent fill with 0.07 acre depressional wetlands to be hand cleared.

Roadway impacts proposed at Site B2 involve 0.02 acre of permanent fill with 0.06 acre of hand clearing in depressional wetlands.

Extension of the double 6-foot by 5-foot RCBC proposed at Site B3 involves 0.09 acre of permanent fill and less than 0.01 acre excavation with 0.07 acre of hand clearing for a total 0.10 acre impact within depressional wetlands.

Ditching through Site B5 is required due to topography. Roadway impacts proposed at Site B5 involve 0.04 acre of permanent fill and 0.09 acre of hand clearing in depressional wetlands.

Roadway impacts at Site B7 will necessitate 0.48 acre permanent fill and 0.05 acre hand clearing in depressional wetlands. Roadway impacts proposed at Site B9 involve 0.11 acre of permanent fill with 0.02 acre of hand clearing within depressional wetlands.

Streams

The existing 6-foot by 6-foot RCBC at Site B1 will be retained and extended. The outlet extension will be buried approximately 1-foot; however, the inlet extension will not, due to the existing inlet being perched. Permanent impacts to 72 linear feet (0.02 acre) of stream channel and temporary impacts to 80 linear feet (0.02 acre) channel tributary to the Neuse River will result.

The existing double 6-foot by 5-foot RCBC at Site B3 will be retained and extended. The extensions will not be buried due to the existing inlet and outlet being perched. Permanent impacts to 105 linear feet (0.02 acre) stream channel and temporary impacts to 61 linear feet (0.01 acre) channel tributary to Mills Branch will result.

The existing 4-foot by 5-foot RCBC at Site B8 will be extended with a 72-inch Reinforced Concrete Pipe (RCP) that will be buried 1-foot. Permanent impacts to 155 linear feet (0.02 acre) stream channel and temporary impacts to 77 linear feet (0.01 acre) channel tributary to Mills Branch will result. The existing 42-inch Corrugated Metal Pipe (CMP) will be replaced with a 72-inch RCP that will be buried 1-foot. Permanent impacts to 111 linear feet (0.01 acre) stream channel and temporary impacts to 18 linear feet (<0.01 acre) channel tributary to Mills Branch will also result at Site B8. Total permanent impacts of 266 linear feet (0.03 acre) channel and temporary impacts of 95 linear feet (<0.02 acre) channel are proposed at Site B8.

Neuse River Basin Riparian Buffer

This project is located in the Neuse River Basin; therefore, the regulations pertaining to the buffer rules apply. There will be a total of 26,149 ft^2 of impacts to riparian buffers (see Table 2). This includes 12,759 ft^2 (7,913 ft^2 in Zone 1 and 4,846 ft^2 in Zone 2) of impacts that will occur from approach fill, excavation, and mechanized clearing activities due to road crossings. These road crossing activities are allowable because impacts are less than the 150-foot or one-third of an acre threshold per crossing, for which mitigation is required. Uses designated as allowable may proceed within the riparian buffer provided that there are no practical alternatives to the requested use pursuant to Item (8) of this rule. There are 13,390 ft^2 (8,264 ft^2 in Zone 1 and 5,126 ft^2 in Zone 2) of road crossing impacts that exceed the threshold for mitigation, which is considered allowable with mitigation. However, a portion of these impacts overlap with jurisdictional wetlands. When this occurs, wetland mitigation will be provided in

lieu of buffer mitigation. There is also an additional 1,600 ft^2 (0.059 acre) of hand clearing in the riparian buffer (800 ft^2 in Zone 1 and 1,000 ft^2 in Zone 2) for aerial power lines. This action is exempt because it is a perpendicular crossing that disturbs equal to or less than 150 linear feet of riparian buffer. Additional information is provided in the buffer impacts summary sheets.

Protected Species

Plants and animals with federal classification of Endangered (E), Threatened (T), Proposed Endangered (PE), and Proposed Threatened (PT) are protected under provisions of Section 7 and Section 9 of the Endangered Species Act of 1973, as amended. The United States Fish and Wildlife Service (USFWS) include the five federally protected species summarized in Table 3 for Craven County as of the January 31, 2008, listing. Species characteristics, distribution, and habitat details along with survey and biological conclusion information were reported in the previously referenced EA.

Table 3. Federally Protected Species for Craven County

Scientific Name	Common Name	Status	Habitat Present	Biological Conclusion
Alligator mississippiensis	American alligator	T(S/A)	N/A	Not Required
Dermochelys coriacea	Leatherback sea turtle	E	No	No Effect
Picoides borealis	Red-cockaded woodpecker	E	No	No Effect
Trichechus manatus	West Indian manatee	E	No	No Effect
Aeschynomene virginica	Sensitive joint-vetch	T	Yes	No Effect

Surveys were completed in 1999 prior to the completion of the EA for the above-listed species. During these surveys, no suitable habitat was identified within the study area for Project R-3403A for leatherback sea turtle (*Dermochelys coriacea*), red-cockaded woodpecker (*Picoides borealis*), or West Indian manatee (*Trichechus manatus*). Specific survey for individuals or populations of sensitive joint-vetch (*Aeschynomene virginica*) was conducted because potentially suitable habitat was identified for this species. The Project R-3403 study area was re-surveyed in September 2002 for sensitive joint-vetch and the Project R-3403A study area will be re-surveyed for individuals and/or populations of this species again prior to construction. Therefore, biological conclusions of No Effect were given due to the lack of occurrence or absence of habitat for the federally protected species listed for Craven County.

Bald and Golden Eagle Protection Act

In the July 9, 2007, Federal Register (72:37346-37372), the bald eagle was declared recovered, and removed (de-listed) from the Federal List of Threatened and Endangered wildlife. This de-listing took effect August 8, 2007. After de-listing, the Bald and Golden Eagle Protection Act (16 U.S.C. 668-668d) became the primary law protecting bald eagles. No suitable bald eagle nesting habitat was found within 660 feet of the project limits. This project will, therefore, have no effect on the bald eagle.

Cultural Resources

Project effects on archaeological and architectural resources were documented in the EA and summarized as follows:

Archaeological Resources

This is a federally funded project subject to Section 106 of the National Historic Preservation Act which requires consultation with the State Historic Preservation Office (HPO) on possible effects of the project on historic properties. The Area of Potential Effects (APE) for this project is defined as the geographic area or areas within which a project may cause changes in the character or use of historic properties. The

HPO requested that background research be provided for the general project area and a National Register of Historic Places (NRHP) evaluation for site 31CV244/244** be completed.

Field investigations were comprised primarily of pedestrian reconnaissance of plowed field locations. The pedestrian survey revealed a high degree of landform disturbance within the APE due to residential, industrial, and agricultural development. In addition, the presence of the Norfolk and Southern Railroad adjacent to the east side of the existing US 17 right-of-way has lessened the possibility for intact archaeological sites within the eastern limits of the project's APE. A single historic surface scatter designated site 31CV257** was recorded within the project area. A series of twelve 50cm x 50cm subsurface test units were excavated within the limits of site 31CV244/244** which yielded evidence of Woodland and late 19th century components predominantly confined to the plow zone. The Wallace cemetery was documented due to its close proximity to the project area. At least 23 graves are present with an internment date range from 1882-1973.

None of these resources were determined to be significant through application of the criteria established for eligibility to the NRHP under 36 CFR§60.4. In addition, there are no visible remains or features that would be appropriate for public display and interpretation, and would warrant preservation in place as a public exhibit. Therefore, Section 4(f) of the Department of Transportation Act of 1966 (U.S.C.§303) as amended does not apply. No further archaeological work is recommended.

Architectural Resources

An architectural historian with the NCDOT conducted a field study of the project's APE and reported the findings to the HPO. For purposes of compliance with Section 106 of the National Historic Preservation Act, HPO and NCDOT concur that the following properties are eligible for the NRHP as contributing resources with the Bridgeton Historic District:

House (Property #39), House (Property #41), House (Property #44), & House (Property #45).

The Bridgeton Historic District is a "well-preserved early twentieth century community that has local significance both for its architecture and its history." It was determined eligible for the NRHP in 1992, with most buildings within the district contributing to its integrity, in spite of typical alterations such as the addition of artificial siding and the replacement of porches. The project will have no adverse effect on the Bridgeton Historic District because the chosen alignment does not take property in the district and there will be no construction easements in the district. This assessment of effects is recorded on a form signed by NCDOT, HPO, and FHWA on November 29, 2001.

FEMA Compliance

The project has been coordinated with appropriate state and local officials and the Federal Emergency Management Agency (FEMA) to assure compliance with federal, state, and local floodway regulations. The location and conceptual design of the build alternative in the floodplain and floodway were planned to mitigate increases in flooding risk and substantial environmental impacts. A floodplain evaluation was conducted for the project in accordance with Executive Order 11988 "Floodplain Management" and 23 CFR 650, Subpart A "Location and Hydraulic Design of Encroachments of Floodplains." The floodplains in the study area were identified. The recommended alternative crosses the 100-year floodplains of an unnamed tributary to the Neuse River and an unnamed tributary to Mills Branch. Since this is a widening project, existing culverts within the 100-year floodplain will be retained and extended. Potential impacts to the floodplain from erosion will be mitigated through strict adherence to NCDOT's "Best Management Practices for Protection of Surface Waters."

Mitigation Options

The NCDOT is committed to incorporating all reasonable and practical design features to avoid and minimize jurisdictional impacts, and to provide full compensatory mitigation for all remaining,

unavoidable jurisdictional impacts. Avoidance measures were taken during the planning and NEPA compliance stages and minimization measures were incorporated as part of the project design. Because opportunities for on-site mitigation are limited, NCDOT proposes to utilize the EEP to mitigate for wetland, stream, and buffer impacts.

Avoidance and Minimization

Due to the location and extent of wetlands and surface waters within the project study area, complete avoidance of impacts is not possible. Any widening of US 17 will impact jurisdictional areas. All jurisdictional features were delineated, field verified, and surveyed within the project corridor. Using these surveyed features, preliminary designs were adjusted to avoid and/or minimize impacts to wetlands, streams, and riparian buffer areas. NCDOT employs many strategies to avoid and minimize impacts to jurisdictional areas in all of its designs. Many of these strategies have been incorporated into Best Management Practice (BMP) documents that have been reviewed and approved by the resource agencies and which will be followed throughout construction. Wetland areas not affected by the project will be protected from unnecessary encroachment. Avoidance and minimization strategies applied on this project are as follows:

- No staging of construction equipment or storage of construction supplies will be allowed in wetlands or near surface waters.
- The project was designed to avoid or minimize disturbance to aquatic life movements.
- Crossings of jurisdictional areas were angled to cross as perpendicularly as possible to minimize impacts.
- Design Standards in Sensitive Watersheds will be implemented to minimize erosion/sedimentation loss during construction phase.
- Medians were reduced to minimum safe widths in order to minimize impacts to jurisdictional areas.
- 3:1 fill slopes will be applied in jurisdictional areas where practicable.
- Hand-clearing will be used in wetlands where practicable.

Compensation

The NCDOT has avoided and minimized impacts to jurisdictional resources to the greatest extent practicable as described above. The unavoidable impacts to 1.06 acres of jurisdictional wetlands and 443 linear feet of stream will be offset by compensatory mitigation provided by EEP. A copy of the EEP acceptance letter is included with this application.

Indirect and Cumulative Effects

Indirect and Cumulative Effects (ICE) were described in an addendum titled "Indirect and Cumulative Impacts" to the EA included in the Finding of No Significant Impact (FONSI) completed in January 2005. Based on discussions with the local planning community in Craven County, as well as analysis of demographic characteristics, employment trends, local land use and transportation plans, inventory of notable features, and qualitative assessment of impact-causing conditions, it was determined that construction of R-3403 should have a low potential to generate indirect effects.

Regulatory Approvals

Section 404: The NCDOT requests that these activities be authorized by Nationwide Permit 14. We are also requesting the issuance of a Nationwide Permit 33 for the temporary surface water impacts due to the extension of culverts. (72 CFR; 11092-11198, March 12, 2007).

Section 401: We anticipate 401 General Certification numbers 3704 and 3688 will apply to this project. The NCDOT will adhere to all standard conditions of the aforementioned certifications. In accordance with 15A NCAC 2H, Section .0500(a), we are providing five copies of this application to the NCDWQ for their review and approval.

Riparian Buffer: By copy of this application, NCDOT is requesting Neuse Riparian Buffer authorization from NCDWQ.

CAMA: Due to the absence of any Areas of Environmental Concern, this project will not require a CAMA permit as confirmed by North Carolina Division of Coastal Management staff. As previously stated the project will require a Nationwide permit, which has been determined to be consistent with the State's coastal program.

State Stormwater : NCDOT has received a state stormwater permit for the AB Section and is submitting an application for the AA Section under separate cover.

A copy of this permit application will be posted on the NCDOT website at: http://www.ncdot.org/doh/preconstruct/pe/neu/permit.html. If you have any questions or need additional information, please contact Mr. Chris Underwood at 919-715-1451 or csunderwood@ncdot.gov.

Sincerely,

E. L. Lusk

I. Processing

1. Check all of the approval(s) requested for this project:
   - ☒ Section 404 Permit
   - ☐ Section 10 Permit
   - ☒ 401 Water Quality Certification
   - ☒ Riparian or Watershed Buffer Rules
   - ☐ Isolated Wetland Permit from DWQ
   - ☐ Express 401 Water Quality Certification

2. Nationwide, Regional or General Permit Number(s) Requested: NWP 14 and 33

3. If this notification is solely a courtesy copy because written approval for the 401 Certification is not required, check here: ☐

4. If payment into the North Carolina Ecosystem Enhancement Program (NCEEP) is proposed for mitigation of impacts, attach the acceptance letter from NCEEP, complete section VIII, and check here: ☒

5. If your project is located in any of North Carolina's twenty coastal counties (listed on page 4), and the project is within a North Carolina Division of Coastal Management Area of Environmental Concern (see the top of page 2 for further details), check here: ☐

II. Applicant Information

1. Owner/Applicant Information
   Name: Dr, Gregory J. Thorpe, Ph.D.
   Mailing Address: North Carolina Department of Transportation
   Project Development and Environmental Analysis Branch
   1598 Mail Service Center
   Raleigh, NC 27699-1598
   Telephone Number: 919-715-1500 Fax Number: _____
   E-mail Address: _____

2. Agent/Consultant Information (A signed and dated copy of the Agent Authorization letter must be attached if the Agent has signatory authority for the owner/applicant.)
   Name: _____
   Company Affiliation: _____
   Mailing Address: _____
   _____
   _____
   Telephone Number: _____ Fax Number: _____
   E-mail Address: _____

III. Project Information

Attach a **vicinity map** clearly showing the location of the property with respect to local landmarks such as towns, rivers, and roads. Also provide a detailed **site plan** showing property boundaries and development plans in relation to surrounding properties. Both the vicinity map and site plan must include a scale and north arrow. The specific footprints of all buildings, impervious surfaces, or other facilities must be included. If possible, the maps and plans should include the appropriate USGS Topographic Quad Map and NRCS Soil Survey with the property boundaries outlined. Plan drawings, or other maps may be included at the applicant's discretion, so long as the property is clearly defined. For administrative and distribution purposes, the USACE requires information to be submitted on sheets no larger than 11 by 17-inch format; however, DWQ may accept paperwork of any size. DWQ prefers full-size construction drawings rather than a sequential sheet version of the full-size plans. If full-size plans are reduced to a small scale such that the final version is illegible, the applicant will be informed that the project has been placed on hold until decipherable maps are provided.

1. Name of project: US 17 from Mills Street in Bridgeton to North of SR 1433 (Antioch Road)

2. T.I.P. Project Number or State Project Number (NCDOT Only): R 3403A

3. Property Identification Number (Tax PIN): _____

4. Location
   County: Craven Nearest Town: Bridgeton
   Subdivision name (include phase/lot number): _____
   Directions to site (include road numbers/names, landmarks, etc.): From Washington Field Office, Drive: 30.3 mi – about 46 mins. Head north on Union Dr toward W 2nd St 449 ft; Turn left at W 2nd St 0.3 mi 1 min; Turn left at US-17 16.1 mi 24 mins; Slight left at US-17-BYP S 3.5 mi 6 mins; Slight left at US-17 S 10.3 mi 14 mins. Arrive Project Terminus. Head south on US-17 toward Antioch Rd 2.9 mi., 4 mins. Arrive Project Start (Mills St.)

5. Site coordinates (For linear projects, such as a road or utility line, attach a sheet that separately lists the coordinates for each crossing of a distinct waterbody.)
   Decimal Degrees (6 digits minimum): 35.122330 °N 77.019680 °W

6. Property size (acres): _____

7. Name of nearest receiving body of water: UT to Neuse River; UT to Mills Branch

8. River Basin: Neuse
   (Note – this must be one of North Carolina's seventeen designated major river basins. The River Basin map is available at http://h2o.enr.state.nc.us/admin/maps/.)

9. Describe the existing conditions on the site and general land use in the vicinity of the project at the time of this application: Agriculture, residential, and commercial (see attached for details)

10. Describe the overall project in detail, including the type of equipment to be used: Widen US 17 to a multi-lane facility for 2.9 miles, retain at-grade intersection with Norfolk Southern Railroad in Bridgeton with new flashing gates and rubberized road surface. Three reinforced concrete box culverts will be retained and extended (see attached letter for more details).

11. Explain the purpose of the proposed work: Alleviate congestion and improve the level of service along US 17, and by doing so, improve the safety of the route. Providing additional traffic-carrying capacity will improve US 17 operation as a hurricane evacuation route (see attached for details).

IV. Prior Project History

If jurisdictional determinations and/or permits have been requested and/or obtained for this project (including all prior phases of the same subdivision) in the past, please explain. Include the USACE Action ID Number, DWQ Project Number, application date, and date permits and certifications were issued or withdrawn. Provide photocopies of previously issued permits, certifications or other useful information. Describe previously approved wetland, stream and buffer impacts, along with associated mitigation (where applicable). If this is a NCDOT project, list and describe permits issued for prior segments of the same T.I.P. project, along with construction schedules. Public Notice for R-3403 issed May 4, 2004 (USACE Action ID 200411285)

V. Future Project Plans

Are any future permit requests anticipated for this project? If so, describe the anticipated work, and provide justification for the exclusion of this work from the current application.
R-3403B anticipated future work excluded from current application due to construction dates

VI. Proposed Impacts to Waters of the United States/Waters of the State

It is the applicant's (or agent's) responsibility to determine, delineate and map all impacts to wetlands, open water, and stream channels associated with the project. Each impact must be listed separately in the tables below (e.g., culvert installation should be listed separately from riprap dissipater pads). Be sure to indicate if an impact is temporary. All proposed impacts, permanent and temporary, must be listed, and must be labeled and clearly identifiable on an accompanying site plan. All wetlands and waters, and all streams (intermittent and perennial) should be shown on a delineation map, whether or not impacts are proposed to these systems. Wetland and stream evaluation and delineation forms should be included as appropriate. Photographs may be included at the applicant's discretion. If this proposed impact is strictly for wetland or stream mitigation, list and describe the impact in Section VIII below. If additional space is needed for listing or description, please attach a separate sheet.

1. Provide a written description of the proposed impacts: See attached letter for details

2. Individually list wetland impacts. Types of impacts include, but are not limited to mechanized clearing, grading, fill, excavation, flooding, ditching/drainage, etc. For dams, separately list impacts due to both structure and flooding.

Wetland Impact Site Number (indicate on map)	Type of Impact	Type of Wetland (e.g., forested, marsh, herbaceous, bog, etc.)	Located within 100-year Floodplain (yes/no)	Distance to Nearest Stream (linear feet)	Area of Impact (acres)
See attached	**Permit drawings**				
Total Wetland Impact (acres)					

3. List the total acreage (estimated) of all existing wetlands on the property: 3.10

4. Individually list all intermittent and perennial stream impacts. Be sure to identify temporary impacts. Stream impacts include, but are not limited to placement of fill or culverts, dam construction, flooding, relocation, stabilization activities (e.g., cement walls, rip-rap, crib walls, gabions, etc.), excavation, ditching/straightening, etc. If stream relocation is proposed, plans and profiles showing the linear footprint for both the original and relocated streams must be included. To calculate acreage, multiply length X width, then divide by 43,560.

Stream Impact Number (indicate on map)	Stream Name	Type of Impact	Perennial or Intermittent?	Average Stream Width Before Impact	Impact Length (linear feet)	Area of Impact (acres)
See attached	**Permit drawings**					
Total Stream Impact (by length and acreage)						

5. Individually list all open water impacts (including lakes, ponds, estuaries, sounds, Atlantic Ocean and any other water of the U.S.). Open water impacts include, but are not limited to fill, excavation, dredging, flooding, drainage, bulkheads, etc.

Open Water Impact Site Number (indicate on map)	Name of Waterbody (if applicable)	Type of Impact	Type of Waterbody (lake, pond, estuary, sound, bay, ocean, etc.)	Area of Impact (acres)
N/A				
Total Open Water Impact (acres)				**0.00**

USACE – In accordance with the Final Notice of Issuance and Modification of Nationwide Permits, published in the Federal Register on January 15, 2002, mitigation will be required when necessary to ensure that adverse effects to the aquatic environment are minimal. Factors including size and type of proposed impact and function and relative value of the impacted aquatic resource will be considered in determining acceptability of appropriate and practicable mitigation as proposed. Examples of mitigation that may be appropriate and practicable include, but are not limited to: reducing the size of the project; establishing and maintaining wetland and/or upland vegetated buffers to protect open waters such as streams; and replacing losses of aquatic resource functions and values by creating, restoring, enhancing, or preserving similar functions and values, preferable in the same watershed.

If mitigation is required for this project, a copy of the mitigation plan must be attached in order for USACE or DWQ to consider the application complete for processing. Any application lacking a required mitigation plan or NCEEP concurrence shall be placed on hold as incomplete. An applicant may also choose to review the current guidelines for stream restoration in DWQ's Draft Technical Guide for Stream Work in North Carolina, available at http://h2o.enr.state.nc.us/ncwetlands/strmgide.html.

1. Provide a brief description of the proposed mitigation plan. The description should provide as much information as possible, including, but not limited to: site location (attach directions and/or map, if offsite), affected stream and river basin, type and amount (acreage/linear feet) of mitigation proposed (restoration, enhancement, creation, or preservation), a plan view, preservation mechanism (e.g., deed restrictions, conservation easement, etc.), and a description of the current site conditions and proposed method of construction. Please attach a separate sheet if more space is needed.
   NCDOT has received compensatory mitigation from EEP.

2. Mitigation may also be made by payment into the North Carolina Ecosystem Enhancement Program (NCEEP). Please note it is the applicant's responsibility to contact the NCEEP at (919) 715-0476 to determine availability, and written approval from the NCEEP indicating that they are will to accept payment for the mitigation must be attached to this form. For additional information regarding the application process for the NCEEP, check the NCEEP website at http://h2o.enr.state.nc.us/wrp/index.htm. If use of the NCEEP is proposed, please check the appropriate box on page five and provide the following information:

   Amount of stream mitigation requested (linear feet): **443**
   Amount of buffer mitigation requested (square feet): **13,390**
   Amount of Riparian wetland mitigation requested (acres): **0.14**
   Amount of Non-riparian wetland mitigation requested (acres): **0.92**
   Amount of Coastal wetland mitigation requested (acres): **0**

6. List the cumulative impact to all Waters of the U.S. resulting from the project:

Stream Impact (acres):	**0.07**
Wetland Impact (acres):	**1.06**
Open Water Impact (acres):	**0.00**
Total Impact to Waters of the U.S. (acres)	**1.13**
Total Stream Impact (linear feet):	**679**

7. Isolated Waters
   Do any isolated waters exist on the property? ☒ Yes ☐ No
   Describe all impacts to isolated waters, and include the type of water (wetland or stream) and the size of the proposed impact (acres or linear feet). Please note that this section only applies to waters that have specifically been determined to be isolated by the USACE.
   Impacts include 0.11 acre of fill.

8. Pond Creation
   If construction of a pond is proposed, associated wetland and stream impacts should be included above in the wetland and stream impact sections. Also, the proposed pond should be described here and illustrated on any maps included with this application.
   Pond to be created in (check all that apply): ☐ uplands ☐ stream ☐ wetlands
   Describe the method of construction (e.g., dam/embankment, excavation, installation of draw-down valve or spillway, etc.):_____
   Proposed use or purpose of pond (e.g., livestock watering, irrigation, aesthetic, trout pond, local stormwater requirement, etc.):_____
   Current land use in the vicinity of the pond:_____
   Size of watershed draining to pond:_____ Expected pond surface area:_____

VII. Impact Justification (Avoidance and Minimization)

Specifically describe measures taken to avoid the proposed impacts. It may be useful to provide information related to site constraints such as topography, building ordinances, accessibility, and financial viability of the project. The applicant may attach drawings of alternative, lower-impact site layouts, and explain why these design options were not feasible. Also discuss how impacts were minimized once the desired site plan was developed. If applicable, discuss construction techniques to be followed during construction to reduce impacts. **See attached letter for details**

VIII. Mitigation

DWQ - In accordance with 15A NCAC 2H .0500, mitigation may be required by the NC Division of Water Quality for projects involving greater than or equal to one acre of impacts to freshwater wetlands or greater than or equal to 150 linear feet of total impacts to perennial streams.

IX. Environmental Documentation (required by DWQ)

1. Does the project involve an expenditure of public (federal/state/local) funds or the use of public (federal/state) land? Yes ☒ No ☐

2. If yes, does the project require preparation of an environmental document pursuant to the requirements of the National or North Carolina Environmental Policy Act (NEPA/SEPA)? Note: If you are not sure whether a NEPA/SEPA document is required, call the SEPA coordinator at (919) 733-5083 to review current thresholds for environmental documentation. Yes ☒ No ☐

3. If yes, has the document review been finalized by the State Clearinghouse? If so, please attach a copy of the NEPA or SEPA final approval letter. Yes ☒ No ☐

X. Proposed Impacts on Riparian and Watershed Buffers (required by DWQ)

It is the applicant's (or agent's) responsibility to determine, delineate and map all impacts to required state and local buffers associated with the project. The applicant must also provide justification for these impacts in Section VII above. All proposed impacts must be listed herein, and must be clearly identifiable on the accompanying site plan. All buffers must be shown on a map, whether or not impacts are proposed to the buffers. Correspondence from the DWQ Regional Office may be included as appropriate. Photographs may also be included at the applicant's discretion.

1. Will the project impact protected riparian buffers identified within 15A NCAC 2B .0233 (Neuse), 15A NCAC 2B .0259 (Tar-Pamlico), 15A NCAC 02B .0243 (Catawba) 15A NCAC 2B .0250 (Randleman Rules and Water Supply Buffer Requirements), or other (please identify ____)? Yes ☒ No ☐

2. If "yes", identify the square feet and acreage of impact to each zone of the riparian buffers. If buffer mitigation is required calculate the required amount of mitigation by applying the buffer multipliers.

Zone*	Impact (square feet)	Multiplier	Required Mitigation
1	**8,264**	3 (2 for Catawba)	**24,792**
2	**5126**	1.5	**7,689**
Total	**13,390**		**32,481**

* Zone 1 extends out 30 feet perpendicular from the top of the near bank of channel; Zone 2 extends an additional 20 feet from the edge of Zone 1.

3. If buffer mitigation is required, please discuss what type of mitigation is proposed (i.e., Donation of Property, Riparian Buffer Restoration / Enhancement, or Payment into the Riparian Buffer Restoration Fund). Please attach all appropriate information as identified within 15A NCAC 2B .0242 or .0244, or .0260. Payment into the Riparian Buffer Restoration Fund

XI. Stormwater (required by DWQ)

Describe impervious acreage (existing and proposed) versus total acreage on the site. Discuss stormwater controls proposed in order to protect surface waters and wetlands downstream from the property. If percent impervious surface exceeds 20%, please provide calculations demonstrating total proposed impervious level. NCDOT received a stormwater permit for the AB section and will be submitting one for the AA section.

XII. Sewage Disposal (required by DWQ)

Clearly detail the ultimate treatment methods and disposition (non-discharge or discharge) of wastewater generated from the proposed project, or available capacity of the subject facility.
N/A

XIII. Violations (required by DWQ)

Is this site in violation of DWQ Wetland Rules (15A NCAC 2H .0500) or any Buffer Rules?
Yes ☐ No ☒

Is this an after-the-fact permit application? Yes ☐ No ☒

XIV. Cumulative Impacts (required by DWQ)

Will this project (based on past and reasonably anticipated future impacts) result in additional development, which could impact nearby downstream water quality? Yes ☐ No ☒
If yes, please submit a qualitative or quantitative cumulative impact analysis in accordance with the most recent North Carolina Division of Water Quality policy posted on our website at http://h2o.enr.state.nc.us/ncwetlands. If no, please provide a short narrative description:
US 17 will be widened to a four lane, divided highway in Bridgeton, NC.

XV. Other Circumstances (Optional):

It is the applicant's responsibility to submit the application sufficiently in advance of desired construction dates to allow processing time for these permits. However, an applicant may choose to list constraints associated with construction or sequencing that may impose limits on work schedules (e.g., draw-down schedules for lakes, dates associated with Endangered and Threatened Species, accessibility problems, or other issues outside of the applicant's control).
N/A

E. L. Lusk 12-9-08

Applicant/Agent's Signature **Date**
(Agent's signature is valid only if an authorization letter from the applicant is provided.)

Subject: Meeting Minutes for 4C Permit Review Meeting
on December 13, 2006 for R-3403A in Craven County

Galen Cail, NCDOT Hydraulics
Will Hines, Sungate Design
Greg Brew, NCDOT Roadway Design
David Williams, NCDOT Roadway Design
Roy Girolami, NCDOT Structure Design
Laura Sutton, NCDOT Structure Design
Mike Robinson, NCDOT Construction
Richard Darling, Buck Engineering

General Comments:

Provide treatment/velocity info table with buffer permit package. (Info will be sent to DWQ for review prior to final submittal).

Make sure any rip rap associated with jurisdictional streams is noted as "ON BANKS ONLY".

Profiles of any culverts 60" or larger will be provided in final wetland/stream permit package. It was stated that all culverts at jurisdictional streams will be buried 1' except at those crossings where existing culverts are already perched (case at both box culvert crossings).

It was requested to provide submittal dates on plan sheets.

Site 1; Sheet 8: Jurisdictional Stream Impacts

-There was discussion about the use of flow spreaders prior to the buffer in the SW corner of the crossing. It was stated a PSH in the ditch would result in either ponding in the ditch (and saturation effects to the pavement subsurface) or require additional excavation in the buffer in order to "daylight" drainage. Treatment is acquired but needs to be shown with table.

Site 2; Sheet 9: Wetland Impacts

There was discussion on use of flow spreaders in the NW and NE corners of the crossing. Since these are in front of houses it was determined the location was not preferred. Treatment is acquired but needs to be shown with table.

Site 3; Sheet 11: Jurisdictional Stream & Wetland Impacts

-No comments

Site 4; Sheet 12: Wetland Impacts

-It was noted this site will be shown as a "total take" due to the proximity of the ditch/excavation in wetlands to the wetland limits. There is an existing roadway ditch. The proposed ditch is required for roadway and pavement subsurface drainage. Separate the "Drained Impacts" from the excavated and filled.

Site 5; Sheet 13: Wetland Impacts

-Additional wetland impacts due to draining effects of the ditch/excavation will be provided. Separate the "Drained Impacts" from the excavated and filled.

Site 6; Sheet 13 & 14: Wetland Impacts

-Except for a short section of cut (approximately 26') the site impacts are due to roadway fill. So no wetland drainage effects due to the cut are anticipated.

Site 7; Sheet 14 & 15: Jurisdictional Stream & Wetland Impacts

-Need to investigate the use of a flow spreader/PSH in the NE corner of the crossing.

-It was stated the existing box culvert is being extended with a 72" pipe.

Site 8; Sheet 14: Jurisdictional Stream Impacts

-It was stated the existing 42" pipe is being replaced by a 72" pipe.

Meeting Adjourned

STORMWATER MANAGEMENT PLAN

Project: 34538.1.1
TIP: R-3403AB
County: Craven

Hydraulics Project Engineers: W. Henry Wells, Jr., PE and William M. Hines, Jr., P.E. (Sungate Design Group); W. Galen Cail, P.E. (NCDOT Hydraulics Unit)

ROADWAY DESCRIPTION

The project involves the widening of US 17, located in Bridgeton, Craven County, from the Norfolk/Southern R/R to North of SR 1433 (Antioch Road). The overall length of the project is approximately 2.88 miles. The existing roadway is a predominately 28-foot wide roadway with two 12-foot wide lanes and 2-foot paved shoulders. With Project R-3403AB, it is proposed to widen US 17 to a four-lane, shoulder section roadway with a narrow grass median. The project drainage system consists of cross pipes, grated inlets and associated pipe systems, and side and lateral ditches and swales.

ENVIRONMENTAL DESCRIPTION

The project is located in the Neuse River Basin. The project crosses three streams, one Tributary to the Neuse River and two Tributaries to Mills Branch. Two of these crossings have designated Neuse River buffers. There are eight wetland sites that will be impacted by the proposed project. Wetland impacts have been kept to a minimum as much as practicable.

BEST MANAGEMENT PRACTICES AND MAJOR STRUCTURES

The primary goal of Best Management Practices (BMPs) is to prevent degradation of the states surface waters as a result of the location, construction and operation of the highway system. BMPs are activities, practices and procedures taken to prevent or reduce stormwater pollution. The BMPs and measures that will be used on this project to reduce stormwater impacts are grassed swales, raised drive-pipes in ditch lines, and a preformed scour hole. On the four stream crossings, there are two box culverts and two large pipes. The two large pipes will be buried 1-foot; however, the box culverts, currently in a perched condition, cannot be buried.

GRASSED SWALES AND RAISED DRIVE-PIPES

Grassed swales are proposed along the majority of the project. These ditches will have a maximum 3:1 side slope and a 0.0 to 0.3 % grade. In addition, the grassed swales along the side of the roadway will be used for stormwater storage and encourage infiltration by raising the drive-pipes 3-inches above the ditch line.

BOX CULVERT – STA 66+11 -L- (SITE 1)

The existing 6'x 6' RCBC will be retained and extended. The outlet extension will be buried about 1-foot; however, the inlet extension will not, due to the existing inlet being perched. The stream is a tributary to the Neuse River.

BOX CULVERT – STA 109+36 -L- (SITE 3)

The existing 2 @ 6' x 5' RCBC will be retained and extended. The extensions will not be buried due to the existing inlet and outlet being perched. The stream is a tributary to Mills Branch.

72-INCH PIPE – STA 155+47 -L- (SITE 7)

The existing 4'x 5' RCBC will be extended with a 72-inch RCP that will be buried 1-foot. The stream is a tributary to Mills Branch.

72-INCH PIPE – STA 13+46 -L- (SITE 8)

The existing 42-inch CMP will be replaced with a 72-inch RCP that will be buried 1-foot. The stream is a tributary to Mills Branch.

DITCHING IN BUFFER ZONES AND WETLANDS

BUFFERS

Ditching through all of the Sites with Buffer Zones is required due to topography and the inability to daylight the roadway ditches prior to the Buffer. The median storm system is piped directly to streams at buffer Sites 1 and 2 (JS Sites 1 & 3). All median inlets and roadway ditches that drain directly to the streams meet both of the following requirements: 100 feet of grassed swale per 1.0 acres of drainage and the 2-Year velocity is less than 2 feet per second.

WETLANDS

Ditching through Site 4 and 6 is required due to topography. The 2-Year velocity is less than 2 feet per second in each grassed swale.

Ecosystem Enhancement
PROGRAM

November 13, 2008

Mr. Gregory J. Thorpe, Ph.D.
Environmental Management Director
Project Development and Environmental Analysis Branch
North Carolina Department of Transportation
1548 Mail Service Center
Raleigh, North Carolina 27699-1548

Dear Dr. Thorpe:

Subject: EEP Mitigation Acceptance Letter:

R-3403AA/AB, US 17 Improvements at Bridgeton, Craven County

The purpose of this letter is to notify you that the Ecosystem Enhancement Program (EEP) will provide the compensatory stream, riparian wetland, and nonriparian wetland mitigation and buffer mitigation for the subject project. **This mitigation acceptance letter replaces the mitigation acceptance letters issued on May 14, 2008 and October 7, 2008.** Based on the information supplied by you on October 6, 2008, the impacts are located in CU 03020204 of the Neuse River Basin in the Southern Outer Coastal Plain (SOCP) Eco-Region, and are as follows:

Warm Stream:	443 feet
Riparian Wetland:	0.15 acre
Nonriparian Wetland:	0.92 acre
Buffer – Zone 1:	8,264 square feet
Buffer – Zone 2:	5,126 square feet

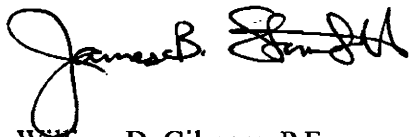
All buffer mitigation requests and approvals are administrated through the Riparian Restoration Buffer Fund. The NCDOT will be responsible to ensure that appropriate compensation for the buffer mitigation will be provided in the agreed upon method of fund transfer. Upon receipt of the NCDWQ's Buffer Authorization

Certification, EEP will transfer funds from Tri-Party MOA Fund into the Riparian Restoration Buffer Fund. Upon completion of transfer payment, NCDOT will have completed its riparian buffer mitigation responsibility for TIP R-3403AA/AB. Subsequently, EEP will conduct a review of current MOA mitigation projects in the river basin to determine if available buffer mitigation credits exist. If there are buffer mitigation credits available, then the Riparian Restoration Buffer Fund will purchase the appropriate amount of buffer mitigation credits from Tri-Party MOA Fund.

EEP commits to implementing sufficient stream, riparian wetland, and nonriparian wetland mitigation credits to offset the impacts associated with this project by the end of the MOA Year in which this project is permitted, in accordance with Section X of the Amendment No. 2 to the Memorandum of Agreement between the North Carolina Department of Environment and Natural Resources, the North Carolina Department of Transportation, and the U. S. Army Corps of Engineers, fully executed on March 8, 2007. If the above referenced stream or buffer impact amounts are revised, then this mitigation acceptance letter will no longer be valid and a new mitigation acceptance letter will be required from EEP.

If you have any questions or need additional information, please contact Ms. Beth Harmon at 919-715-1929.

Sincerely,



William D. Gilmore, P.E.
EEP Director

cc: Mr. William Wescott, USACE – Washington Regulatory Field Office
Mr. Brian Wrenn, Division of Water Quality, Wetlands/401 Unit
File: R-3403AA/AB Revised 2

Ecosystem Enhancement PROGRAM

November 13, 2008

Mr. William Wescott
U. S. Army Corps of Engineers
Washington Regulatory Field Office
Post Office Box 1000
Washington, North Carolina 27889-1000

Dear Mr. Wescott:

Subject: EEP Mitigation Acceptance Letter:

R-3403AA/AB, US 17 Improvements in Bridgeton, Craven County; Neuse River Basin (Cataloging Unit 03020204); Southern Outer Coastal Plain (SOCP) Eco-Region

The purpose of this letter is to notify you that the Ecosystem Enhancement Program (EEP) will provide the compensatory stream, riparian wetland and nonriparian wetland mitigation and the buffer mitigation for the unavoidable impact associated with the above referenced project. **This mitigation notification letter replaces the mitigation notification letters issued on May 14, 2008 and October 7, 2008.** As indicated in the NCDOT's mitigation request dated October 7, 2008, stream, riparian, and nonriparian wetland mitigation from EEP is required for approximately 443 feet of warm stream impacts, 0.15 acre of riparian wetland impacts, and 0.92 acre nonriparian wetland impacts.

Also, this project will impact buffers located in CU 03020204 of the Neuse River Basin. The total buffer impacts are 8,264 square feet in Zone 1 and 5,126 square feet in Zone 2 with a total buffer mitigation requirement of 32,481.0 square feet. If the buffer impacts or the amount of mitigation required from EEP increases or decreases for this project, then this mitigation acceptance letter will no longer be valid and a new mitigation acceptance letter will be required. All buffer mitigation requests and approvals are administrated through the Riparian Restoration Buffer Fund (Fund 2982).

The NCDOT will be responsible to ensure that the appropriate compensation for the buffer mitigation will be provided in the agreed upon method of fund transfer. Upon receipt of the NCDWQ's Buffer Authorization Certification, EEP will transfer funds

from Fund 2984 (Tri-Party MOA Account) into Fund 2982 and commit to provide the appropriate buffer mitigation to offset the impacts associated with this project.

Stream, riparian wetland, and nonriparian wetland mitigation associated with this project will be provided in accordance with Section X of the Amendment No. 2 to the Memorandum of Agreement between the N. C. Department of Environment and Natural Resources, the N. C. Department of Transportation, and the U. S. Army Corps of Engineers fully executed on March 8, 2007 (Tri-Party MOA). EEP commits to implement sufficient stream mitigation up to 886 stream credits, 0.30 riparian wetland credits, and 1.84 nonriparian wetland credits to offset the impacts associated with this project by the end of the MOA year in which this project is permitted. If the above referenced impact amounts are revised, then this mitigation acceptance letter will no longer be valid and a new mitigation acceptance letter will be required from EEP.

If you have any questions or need additional information, please contact Ms. Beth Harmon at 919-715-1929.

Sincerely,

William D. Gilmore, P.E.
EEP Director
