Attention: Thomas Steffens
NCDOT Coordinator

Dear Sir:

Subject: **Application for Section 404 Nationwide Permits (NWP) 23 & 12, Section 401 Water Quality Certification & Riparian Buffer Certification** for the replacement of Bridge No. 326 over Mill Branch Creek on SR 1525 (Cornwallis Road) in Johnston County; TIP Project B-4772; Federal Aid Project No. BRZ-1525 (9); Debit $240 from WBS No. 33769.1.1.

Please find enclosed PCN, permit drawings, stormwater management plan, and roadway plans for the above referenced project proposed by the North Carolina Department of Transportation (NCDOT). A Programmatic Categorical Exclusion (PCE) was completed for this project on January 29, 2011 and distributed shortly thereafter. Additional copies are available upon request. The NCDOT proposes to replace existing Bridge No. 326 over Mill Branch Creek on SR 1525 in Johnston County. The project involves replacement of the existing structurally deficient bridge and approaches with a new 88-foot bridge. The new bridge will include two 12-foot lanes and 9-foot 5-inch offsets. The approach roadway will extend approximately 235 feet from the west end of the new bridge and 175 feet from the east end of the new bridge. The approaches will include a 24-foot pavement width, providing two 12-foot lanes and eight-foot grass shoulders.

Proposed permanent impacts to riparian wetlands from bridge construction are 0.03 acre for fill and 0.08 acre for mechanized clearing. The project will impact riparian buffers due to bridge construction and approach work. Roadway and bridge buffer impacts involve 5,482 sq. ft. in Zone 1 and 2,075 sq. ft. in Zone 2. Utility work on aerial power lines will affect 1,888 sq. ft. in Zone 1 and 1,144 sq. ft. in zone 2. Traffic will be detoured off-site during construction.

Regulatory Approvals

Section 404 Permit: All aspects of this project are being processed by the Federal Highway Administration as a "Categorical Exclusion" in accordance with 23 CFR 771.115(b). The NCDOT requests that the project be authorized by NWP 23 for bridge construction and NWP 12 for utility relocations.

Section 401 Permit: We anticipate 401 General Certification numbers 3891 and 3884 will apply to this project. NCDOT is requesting written concurrence from the North Carolina Department of Environmental and Natural Resources, Division of Water Quality. We are providing five copies of this application to the NCDWQ for their approval.

Neuse Riparian Buffer Authorization: NCDOT requests that the NC Division of Water Quality review this application and issue a written approval for a Neuse Riparian Buffer Authorization.

A copy of this permit application and its distribution list will be posted on the NCDOT website at http://www.ncdot.org/doh/preconstruct/pe/neu/permit.html.

If you have any questions or need additional information, please contact Gordon Cashin at (919) 707-6107.

E. REVIEW PERFORMED FOR SITE EVALUATION (CHECK ALL THAT APPLY):
☐ Office (Desk) Determination Date:
☐ Field Determination Date(s):

1. The Corps of Engineers believes that there may be jurisdictional waters of the United States on the subject site, and the permit applicant or other affected party who requested this preliminary JD is hereby advised of his or her option to request and obtain an approved jurisdictional determination (JD) for that site. Nevertheless, the permit applicant or other person who requested this preliminary JD has declined to exercise the option to obtain an approved JD in this instance and at this time.

2. In any circumstance where a permit applicant obtains an individual permit, or a Nationwide General Permit (NWP) or other general permit verification requiring "pre-construction notification" (PCN), or requests verification for a non-reporting NWP or other general permit; and the permit applicant has not requested an approved JD for the activity, the permit applicant is hereby made aware of the following: (1) the permit applicant has elected to seek a permit authorization based on a preliminary JD, which does not make an official determination of jurisdictional waters; (2) that the applicant has the option to request an approved JD before accepting the terms and conditions of the permit authorization, and that basing a permit authorization on an approved JD could possibly result in less compensatory mitigation being required or different special conditions; (3) that the applicant has the right to request an individual permit rather than accepting the terms and conditions of the NWP or other general permit authorization; (4) that the applicant can accept a permit authorization and thereby agree to comply with all the terms and conditions of that permit, including whatever mitigation requirements the Corps has determined to be necessary; (5) that undertaking any activity in reliance upon the subject permit authorization without requesting an approved JD constitutes the applicant's acceptance of the use of the preliminary JD, but that either form of JD will be processed as soon as is practicable; (6) accepting a permit authorization (e.g., signing a proffered individual permit) or undertaking any activity in reliance on any form of Corps permit authorization based on a preliminary JD constitutes agreement that all wetlands and other water bodies on the site affected in any way by that activity are jurisdictional waters of the United States, and precludes any challenge to such jurisdiction in any administrative or judicial compliance or enforcement action, or in any administrative appeal or in any Federal court; and (7) whether the applicant elects to use either an approved JD or a preliminary JD, that JD will be processed as soon as is practicable. Further, an approved JD, a proffered individual permit (and all terms and conditions contained therein), or individual permit denial can be administratively appealed pursuant to 33 C.F.R. Part 331, and that in any administrative appeal, jurisdictional issues can be raised (see 33 C.F.R. 331.5(a)(2)). If, during that administrative appeal, it becomes necessary to make an official determination whether CWA jurisdiction exists over a site, or to provide an official delineation of jurisdictional waters on the site, the Corps will provide an approved JD to accomplish that result, as soon as is practicable. This preliminary JD finds that there *"may be"* waters of the United States on the subject project site, and identifies all aquatic features on the site that could be affected by the proposed activity, based on the following information:

STORMWATER MANAGEMENT PLAN

B-4772, WBS No. 38544.1.1
JOHNSTON COUNTY
Hydraulics Project Manager: Stephen R. Morgan, PE
Date: 9/11/2012

ROADWAY DESCRIPTION

The project involves the replacement of bridge number 326 over Mill Branch Creek on SR 1525 (Cornwallis Road) in Johnston County. The overall length of the project is 0.095 mile. The project will replace an existing 2 span 36 foot length bridge with a new single span 88 foot length, 33" Box Beam. An off-site detour will be required.

ENVIRONMENTAL DESCRIPTION

The project is located in the Neuse River. The proposed bridge is over Mill Branch Creek which is classified as C, NSW.

Approximately 0.12 acre of wetlands will be impacted.
Approximately 7557 square feet of buffer zones will be allowable impacted.

BEST MANAGEMENT PRACTICES AND MAJOR STRUCTURES

Best Management Practices (BMPs) and measures used on the project are an attempt to reduce the stormwater impacts to the receiving stream due to erosion and runoff. BMPs used on the job are primarily non-structural and consist of methods to attenuate and disperse stormwater before entering the receiving waters. Bridge deck drainage will not be allowed to directly discharge into the water. At the beginning of the project there are two preformed scour holes (PSH) outside of Buffer Zone 2 used to disperse the flow from the ditches. At the end of the bridge deck drainage is carried in a storm drain system and then out letting onto a rip rap pad to disperse the flow.

PREFORMED SCOUR HOLES

Replace existing bridge over Mill Branch Creek.

A sill is used to restrict low flow to one barrel to prevent over-widening of the stream near the culvert.

Utility Relocation Environmental Permit

Existing Utilities:

1. Underground Telephone Lines - There are existing underground and aerial telephone lines that run the entire length of the project along the right side. There is one existing underground telephone line that runs along the left side of the project and crosses the road before the bridge.

2. Overhead Power Lines – There is an existing aerial power line that crosses the bridge along the left side of the project.

3. Water Line – There is an existing 6" water line located on the right/southeast side of the bridge. It runs through the entire length of the project.

Proposed Utility Relocations:

1. Underground Telephone Lines – The existing telephone lines will be abandoned and dismantled and removed. A new underground telephone line will be installed from Sta. 11+00 up to a new pole which will be at Sta. 13+03. From that point the telephone will become aerial with the existing power line to a new pole at Sta. 17+51. It will then become buried again and ties into existing facilities at Sta. 18+76. There is environmental impacts due to hand clearing in the buffer zones and wetlands.

2. Overhead Power Lines – The poles on the left side of the bridge will remain in place. A new pole will be installed on the right side of the bridge at Sta. 13+03 and connect to the existing poles on the left side. Another new pole will be installed on the right side at Sta. 17+51. . There is environmental impacts due to hand clearing in the buffer zones and wetlands.

3. Water Line – A new 6" water line will be installed by directional bore beginning at Sta. 12+63 and ending at Sta. 18+87. There will be no environmental impacts within the buffer zones or wetlands.
