Pre-Construction Notification (PCN) Form

For Nationwide Permits and Regional General Permits

(along with corresponding Water Quality Certifications)

September 29, 2018 Ver 3

*Please note: fields marked with a red asterisk * below are required. You will not be able to submit the form until all mandatory questions are answered.*

Also, if at any point you wish to print a copy of the E-PCN, all you need to do is right-click on the document and you can print a copy of the form.

Below is a link to the online help file.

https://edocs.deq.nc.gov/WaterResources/0/edoc/624704/PCN%20Help%20File%202018-1-30.pdf

A. Processing Information

County (or Counties) where the project is located:*

Cumberland

Is this project a public transportation project?*

(•) Yes ( ) No

This is any publicly funded by municipal,state or federal funds road, rail, airport transportation project.

Is this a NCDOT Project?*

(•) Yes ( ) No

(NCDOT only) T.I.P. or state project number:

B-5703

WBS #*

45657.1.1

(for NCDOT use only)

1a. Type(s) of approval sought from the Corps:*

[x] Section 404 Permit (wetlands, streams and waters, Clean Water Act)

[ ] Section 10 Permit (navigable waters, tidal waters, Rivers and Harbors Act)

1b. What type(s) of permit(s) do you wish to seek authorization?*

[x] Nationwide Permit (NWP)

[ ] Regional General Permit (RGP)

[ ] Standard (IP)

This form may be used to initiate the standard/individual permit process with the Corps. Please contact your Corps representative concerning submittals for standard permits. All required items that are not provided in the E-PCN can be added to the miscellaneous upload area located at the bottom of this form.

1c. Has the NWP or GP number been verified by the Corps?*

(•) Yes ( ) No

Nationwide Permit (NWP) Number: 13 - Bank Stabilization

NWP Numbers (for multiple NWPS):

List all NW numbers you are applying for not on the drop down list.

1d. Type(s) of approval sought from the DWR:*

check all that apply

[x] 401 Water Quality Certification - Regular

[ ] Non-404 Jurisdictional General Permit

[ ] Individual Permit

[ ] 401 Water Quality Certification - Express

[ ] Riparian Buffer Authorization

1e. Is this notification solely for the record because written approval is not required?

*

For the record only for DWR 401 Certification: (•) Yes ( ) No

For the record only for Corps Permit: ( ) Yes (•) No

1f. Is this an after-the-fact permit application?*

( ) Yes (•) No

1g. Is payment into a mitigation bank or in-lieu fee program proposed for mitigation of impacts?

If so, attach the acceptance letter from mitigation bank or in-lieu fee program.

○ Yes ◉ No

Acceptance Letter Attachment

Click the upload button or drag and drop files here to attach document

FILE TYPE MUST BE PDF

1h. Is the project located in any of NC's twenty coastal counties? *

○ Yes ◉ No

1j. Is the project located in a designated trout watershed? *

○ Yes ◉ No

Link to trout information: http://www.saw.usace.army.mil/Missions/Regulatory-Permit-Program/Agency-Coordination/Trout.aspx

B. Applicant Information

1a. Who is the Primary Contact? *

NCDOT

1b. Primary Contact Email: *

jldilday@ncdot.gov

1c. Primary Contact Phone: *

(xxx)xxx-xxxx

(919)707-6111

1d. Who is applying for the permit? *

☑ Owner ☐ Applicant (other than owner)

(Check all that apply)

1e. Is there an Agent/Consultant for this project? *

○ Yes ◉ No

2. Owner Information

2a. Name(s) on recorded deed: *

NCDOT

2b. Deed book and page no.:

2c. Responsible party:

(for Corporations)

2d. Address *

Street Address

1000 Birch Ridge Drive

Address Line 2

City

Raleigh

State / Province / Region

NC

Postal / Zip Code

27610

Country

USA

2e. Telephone Number: *

(xxx)xxx-xxxx

(919)707-6111

2f. Fax Number:

(xxx)xxx-xxxx

2g. Email Address: *

pharris@ncdot.gov

C. Project Information and Prior Project History

1. Project Information

1a. Name of project: *

B-5703 (Bridge 60 over Lower Little River on US 401) Central

1b. Subdivision name:

(if appropriate)

1c. Nearest municipality / town: *

Linden

2. Project Identification

2a. Property Identification Number:

(tax PIN or parcel ID)

2b. Property size:

(in acres)

2c. Project Address

Street Address

Address Line 2

City

State / Province / Region

Postal / Zip Code

Country

2d. Site coordinates in decimal degrees

Please collect site coordinates in decimal degrees. Use between 4-6 digits (unless you are using a survey-grade GPS device) after the decimal place as appropriate, based on how the location was determined. (For example, most mobile phones with GPS provide locational precision in decimal degrees to map coordinates to 5 or 6 digits after the decimal place.)

Latitude: *

35.2631

ex: 34.208504

Longitude: *

-78.7766

-77.796371

3. Surface Waters

3a. Name of the nearest body of water to proposed project: *

Lower Little River

3b. Water Resources Classification of nearest receiving water: *

C

Surface Water Lookup

3c. What river basin(s) is your project located in? *

Cape Fear

3d. Please provide the 12-digit HUC in which the project is located. *

030300040409

River Basin Lookup

4. Project Description and History

4a. Describe the existing conditions on the site and the general land use in the vicinity of the project at the time of this application: *

Land use in the vicinity is rural, wooded, agriculture and light residential.

4b. Have Corps permits or DWR certifications been obtained for this project (including all prior phases) in the past? *

○ Yes ◉ No ○ Unknown

4d. Attach an 8 1/2 X 11 excerpt from the most recent version of the USGS topographic map indicating the location of the project site. (for DWR)

Click the upload button or drag and drop files here to attach document

File type must be pdf

4e. Attach an 8 1/2 X 11 excerpt from the most recent version of the published County NRCS Soil Survey map depicting the project site. (for DWR)

Click the upload button or drag and drop files here to attach document

File type must be pdf

4f. List the total estimated acreage of all existing wetlands on the property:

0

4g. List the total estimated linear feet of all existing streams on the property:

(intermittent and perennial)

200

4h. Explain the purpose of the proposed project: *

The purpose of this project is to replace the structurally deficient Bridge No. 60 with a new bridge.

4i. Describe the overall project in detail, including indirect impacts and the type of equipment to be used: *

The project involves replacing the existing three span, 176-foot bridge with a three span, 190-foot bridge on the existing alignment. Traffic will be maintained on an off-site detour. Standard road building equipment, such as trucks, dozers, and cranes will be used.

4j. Please upload project drawings for the proposed project.

Click the upload button or drag and drop files here to attach document

B-5703 75 Percent roadway plans.pdf	2.8MB
B-5703_Permit_Plans_and_Impact_20190529.pdf	1.79MB

File type must be pdf

5. Jurisdictional Determinations

5a. Have the wetlands or streams been delineated on the property or proposed impact areas? *

◉ Yes ○ No ○ Unknown

Comments:

5b. If the Corps made a jurisdictional determination, what type of determination was made? *

(•) Preliminary ( ) Approved ( ) Not Verified ( ) Unknown ( ) N/A

Corps AID Number:

Example: SAW-2017-99999

SAW-2016-00747

5c. If 5a is yes, who delineated the jurisdictional areas?

Name (if known): Kim Hamlin

Agency/Consultant Company: SEPI Engineering

Other:

5d. List the dates of the Corp jurisdiction determination or State determination if a determination was made by the Corps or DWR.

Preliminary JD received May 4, 2016.

5d1. Jurisdictional determination upload

Click the upload button or drag and drop files here to attach document

B-5703 Cumberland PJD.pdf 120.31KB

File type must be PDF

6. Future Project Plans

6a. Is this a phased project? *

( ) Yes (•) No

Are any other NWP(s), regional general permit(s), or individual permits(s) used, or intended to be used, to authorize any part of the proposed project or related activity? This includes other separate and distant crossing for linear projects that require Department of the Army authorization but don't require pre-construction notification.

D. Proposed Impacts Inventory

1. Impacts Summary

1a. Where are the impacts associated with your project? (check all that apply):

☐ Wetlands ☑ Streams-tributaries ☐ Buffers

☐ Open Waters ☐ Pond Construction

3. Stream Impacts

If there are perennial or intermittent stream impacts (including temporary impacts) proposed on the site, then complete this question for all stream sites impacted.

"S." will be used in the table below to represent the word "stream".

	3a. Reason for impact * (?)	3b.Impact type *	3c. Type of impact *	3d. S. name *	3e. Stream Type * (?)	3f. Type of Jurisdiction *	3g. S. width *	3h. Impact length *
S1	Riprap at ditch outfall	Permanent	Bank Stabilization	Little Lower River	Perennial	Corps	60 Average (feet)	14 (linear feet)
S2	Site2/3 Bridge riprap	Permanent	Bank Stabilization	Little Lower River	Perennial	Corps	60 Average (feet)	21 (linear feet)

** All Perennial or Intermittent streams must be verified by DWR or delegated local government.

3i. Total jurisdictional ditch impact in square feet:

0

3i. Total permanent stream impacts:

35

3i. Total temporary stream impacts:

0

3i. Total stream and ditch impacts:

35

3j. Comments:

All impacts are from bank stabilization. Interior bridge bents will be on the bank above the normal water level.

E. Impact Justification and Mitigation

1. Avoidance and Minimization

1a. Specifically describe measures taken to avoid or minimize the proposed impacts in designing the project: *

See stormwater management plan for minimization measures.

1b. Specifically describe measures taken to avoid or minimize the proposed impacts through construction techniques: *

The new bridge will have no deck drains or direct discharge into Lower Little River. The bridge will be replaced on the existing alignment. An off-site detour will be used during construction.

2. Compensatory Mitigation for Impacts to Waters of the U.S. or Waters of the State

2a. Does the project require Compensatory Mitigation for impacts to Waters of the U.S. or Waters of the State?

○ Yes ◉ No

2b. If this project DOES NOT require Compensatory Mitigation, explain why:

Impacts are not considered a loss of "waters of the United States"

NC Stream Temperature Classification Maps can be found under the Mitigation Concepts tab on the Wilmington District's RIBITS website.

F. Stormwater Management and Diffuse Flow Plan (required by DWR)

*** Recent changes to the stormwater rules have required updates to this section .***

1. Diffuse Flow Plan

1a. Does the project include or is it adjacent to protected riparian buffers identified within one of the NC Riparian Buffer Protection Rules?

○ Yes ◉ No

For a list of options to meet the diffuse flow requirements, click here.

If no, explain why:

This project is not located within one of the protected riparian buffer basins.

2. Stormwater Management Plan

2a. Is this a NCDOT project subject to compliance with NCDOT's Individual NPDES permit NCS000250? *

◉ Yes ○ No

Comments:

G. Supplementary Information

1. Environmental Documentation

1a. Does the project involve an expenditure of public (federal/state/local) funds or the use of public (federal/state) land? *

◉ Yes ○ No

1b. If you answered "yes" to the above, does the project require preparation of an environmental document pursuant to the requirements of the National or State (North Carolina) Environmental Policy Act (NEPA/SEPA)? *

◉ Yes ○ No

1c. If you answered "yes" to the above, has the document review been finalized by the State Clearing House? (If so, attach a copy of the NEPA or SEPA final approval letter.) *

◉ Yes ○ No

NEPA or SEPA Final Approval Letter

Click the upload button or drag and drop files here to attach document

FILE TYPE MUST BE PDF

2. Violations (DWR Requirement)

2a. Is the site in violation of DWR Water Quality Certification Rules (15A NCAC 2H .0500), Isolated Wetland Rules (15A NCAC 2H .1300), or DWR Surface Water or Wetland Standards or Riparian Buffer Rules (15A NCAC 2B .0200)? *

○ Yes ◉ No

3. Cumulative Impacts (DWR Requirement)

3a. Will this project (based on past and reasonably anticipated future impacts) result in additional development, which could impact nearby downstream water quality? *

○ Yes ◉ No

3b. If you answered "no," provide a short narrative description.

Due to the minimal transportation impact resulting from this bridge replacement, this project will neither influence nearby land uses nor stimulate growth. Therefore, a detailed indirect or cumulative effects study will not be necessary.

4. Sewage Disposal (DWR Requirement)

4a. Is sewage disposal required by DWR for this project? *

○ Yes ○ No ◉ N/A

5. Endangered Species and Designated Critical Habitat (Corps Requirement)

5a. Will this project occur in or near an area with federally protected species or habitat? *

◉ Yes ○ No

5b. Have you checked with the USFWS concerning Endangered Species Act impacts? *

◉ Yes ○ No

5c. If yes, indicate the USFWS Field Office you have contacted.

Raleigh

5d. Is another Federal agency involved? *

○ Yes ◉ No ○ Unknown

5e. Is this a DOT project located within Division's 1-8? *

◉ Yes ○ No

5j. What data sources did you use to determine whether your site would impact Endangered Species or Designated Critical Habitat? *

N.C. Natural Heritage Program database; USFWS-Raleigh Field Office website;biological surveys for protected species listed for Cumberland County, which include American alligator, Cape Fear shiner, red-cockaded woodpecker (RCW), Saint Francis satyr butterfly, American chaffseed, Michaux's sumac, pondberry and rough-leaved loosestrife. All species, except Cape Fear shiner received biological conclusions of "No Effect", due to no habitat being present. A biological conclusion for American alligator is not required due to its listing as Threatened Due to Similarity of Appearance. A survey for the Cape Fear shiner was conducted on June 21, 2018. A biological conclusion of May Affect, Not Likely to Adversely Affect was rendered due to the presence of suitable habitat and a known occurrence of the species approximately 10 miles downstream of the project. The Northern long-eared bat has a conclusion of May Affect, Likely to Adversely Affect and is covered under a Programmatic Biological Opinion. The Little Lower River was determined to be a water body large enough to be considered foraging habitat for the bald eagle. A visual survey for nest trees was conducted on March 9, 2016 within 660 feet of the study area. No eagles or nest trees were observed.

6. Essential Fish Habitat (Corps Requirement)

6a. Will this project occur in or near an area designated as an Essential Fish Habitat? *

○ Yes ◉ No

6b. What data sources did you use to determine whether your site would impact an Essential Fish Habitat? *

NMFS County Index

7. Historic or Prehistoric Cultural Resources (Corps Requirement)

Link to the State Historic Preservation Office Historic Properties Map (does not include archaeological data: http://gis.ncdcr.gov/hpoweb/

7a. Will this project occur in or near an area that the state, federal or tribal governments have designated as having historic or cultural preservation status (e.g., National Historic Trust designation or properties significant in North Carolina history and archaeology)? *

○ Yes ◉ No

7b. What data sources did you use to determine whether your site would impact historic or archeological resources? *

SEPA documentation

7c. Historic or Prehistoric Information Upload

Click the upload button or drag and drop files here to attach document

File must be PDF

8. Flood Zone Designation (Corps Requirement)

Link to the FEMA Floodplain Maps: https://msc.fema.gov/portal/search

8a. Will this project occur in a FEMA-designated 100-year floodplain? *

◉ Yes ○ No

8b. If yes, explain how project meets FEMA requirements:

NCDOT Hydraulics Unit coordination with FEMA

8c. What source(s) did you use to make the floodplain determination? *

FEMA Maps

☐ Previous determination(s). File no. and date of response letter: _____

☑ Other information (please specify): LiDAR

1. The Corps of Engineers believes that there may be jurisdictional waters of the United States on the subject site, and the permit applicant or other affected party who requested this preliminary JD is hereby advised of his or her option to request and obtain an approved jurisdictional determination (JD) for that site. Nevertheless, the permit applicant or other person who requested this preliminary JD has declined to exercise the option to obtain an approved JD in this instance and at this time.

2. In any circumstance where a permit applicant obtains an individual permit, or a Nationwide General Permit (NWP) or other general permit verification requiring "pre-construction notification" (PCN), or requests verification for a non-reporting NWP or other general permit, and the permit applicant has not requested an approved JD for the activity, the permit applicant is hereby made aware of the following: (1) the permit applicant has elected to seek a permit authorization based on a preliminary JD, which does not make an official determination of jurisdictional waters; (2) that the applicant has the option to request an approved JD before accepting the terms and conditions of the permit authorization, and that basing a permit authorization on an approved JD could possibly result in less compensatory mitigation being required or different special conditions; (3) that the applicant has the right to request an individual permit rather than accepting the terms and conditions of the NWP or other general permit authorization; (4) that the applicant can accept a permit authorization and thereby agree to comply with all the terms and conditions of that permit, including whatever mitigation requirements the Corps has determined to be necessary; (5) that undertaking any activity in reliance upon the subject permit authorization without requesting an approved JD constitutes the applicant's acceptance of the use of the preliminary JD, but that either form of JD will be processed as soon as is practicable; (6) accepting a permit authorization (e.g., signing a proffered individual permit) or undertaking any activity in reliance on any form of Corps permit authorization based on a preliminary JD constitutes agreement that all wetlands and other water bodies on the site affected in any way by that activity are jurisdictional waters of the United States, and precludes any challenge to such jurisdiction in any administrative or judicial compliance or enforcement action, or in any administrative appeal or in any Federal court; and (7) whether the applicant elects to use either an approved JD or a preliminary JD, that JD will be processed as soon as is practicable. Further, an approved JD, a proffered individual permit (and all terms and conditions contained therein), or individual permit denial can be administratively appealed pursuant to 33 C.F.R. Part 331, and that in any administrative appeal, jurisdictional issues can be raised (see 33 C.F.R. 331.5(a)(2)). If, during that administrative appeal, it becomes necessary to make an official determination whether CWA jurisdiction exists over a site, or to provide an official delineation of jurisdictional waters on the site, the Corps will provide an approved JD to accomplish that result, as soon as is practicable.

This preliminary JD finds that there *"may be"* waters of the United States on the subject project site, and identifies all aquatic features on the site that could be affected by the proposed activity, based on the following information:

IMPORTANT NOTE: The information recorded on this form has not necessarily been verified by the Corps and should not be relied upon for later jurisdictional determinations.

_____	_____ 03/31/16
Signature and date of Regulatory Project Manager (REQUIRED)	Signature and date of person requesting preliminary JD (REQUIRED, unless obtaining the signature is impracticable)

WETLAND DETERMINATION DATA FORM - Atlantic and Gulf Coastal Plain Region

Project/Site: B-5703/Bridge 60 **City/County:** Cumberland **Sampling Date:** 12-Feb-16

Applicant/Owner: NCDOT **State:** NC **Sampling Point:** Upland DP

Investigator(s): K. Hamlin, W. Smith **Section, Township, Range:** S T R

Landform (hillslope, terrace, etc.): Flat **Local relief (concave, convex, none):** none **Slope:** 0.0 % / 0.0 °

Subregion (LRR or MLRA): MLRA 133A in LRR P **Lat.:** 35.2637 **Long.:** -78.7764 **Datum:** NAD83

Soil Map Unit Name: WkD - Wickham fine sandy loam, 6 to 15 percent slopes **NWI classification:** None

Are climatic/hydrologic conditions on the site typical for this time of year? Yes ◉ No ○ **(If no, explain in Remarks.)**

Are Vegetation ☐ **, Soil** ☐ **, or Hydrology** ☐ **significantly disturbed?** **Are "Normal Circumstances" present?** Yes ◉ No ○

Are Vegetation ☐ **, Soil** ☐ **, or Hydrology** ☐ **naturally problematic?** **(If needed, explain any answers in Remarks.)**

SUMMARY OF FINDINGS - Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes ◉ No ○	**Is the Sampled Area within a Wetland?** Yes ○ No ◉
Hydric Soil Present?	Yes ○ No ◉	
Wetland Hydrology Present?	Yes ○ No ◉	

Remarks:

HYDROLOGY

Definition of Vegetation Strata:

Tree - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and 3 in. (7.6 cm) or larger in diameter at breast height (DBH).

Sapling - Woody plants, excluding woody vines, approximately 20 ft (6 m) or more in height and less than 3 in. (7.6 cm) DBH.

Sapling/Shrub - Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1m) tall.

Shrub - Woody plants, excluding woody vines, approximately 3 to 20 ft (1 to 6 m) in height.

Herb - All herbaceous (non-woody) plants, including herbaceous vines, regardless of size, and woody plants, except woody vines, less than approximately 3 ft (1 m) in height.

Woody vine - All woody vines, regardless of height.

Hydrophytic Vegetation Present? Yes ◉ No ○

Remarks: (If observed, list morphological adaptations below).

*Indicator suffix = National status or professional decision assigned because Regional status not defined by FWS.

Table of Contents

1.0 Introduction

The North Carolina Department of Transportation (NCDOT) proposes the replacement of Bridge No. 60 over Lower Little River on US 401 in Cumberland and Harnett counties (Appendix A, Figure 1). The Lower Little River is located in the Cape Fear River Basin. The Cape Fear Shiner (*Notropis mekistocholas*) is currently listed for both Cumberland and Harnett Counties by the U.S. Fish and Wildlife Service (USFWS) as protected species under the Endangered Species Act (ESA). The Atlantic Pigtoe (*Fusconaia masoni*), was proposed to be listing as Threatened under the ESA on October 11, 2018. Two additional species were proposed to be listed under ESA on May 22, 2019, the Neuse River Waterdog (*Necturus lewisi*) and the Carolina Madtom (*Noturus furiosus*), are both noted for Harnett County but are not know from the Cape Fear Basin and are not evaluated further in this report.

A review of the NC Natural Heritage Program (NCNHP) records, last accessed on May 04, 2018, indicated that no element occurrence (EO) exists for a target species within a 5-mile buffer of the project location (Figure 2). The closest occurrence for Cape Fear Shiner (EO ID 27861) is approximately 10.3 stream miles upstream on the Cape Fear River. This EO was first and last observed on July 23, 2007. The closest occurrence for Atlantic Pigtoe (EO ID 24770) is approximately 18.5 stream miles downstream on the Cape Fear River. The only observation date listed for this historical EO is Pre-1972.

As part of the federal permitting process that requires an evaluation of potential project related impacts to federally protected species, Rummel, Klepper, and Kahl (RK&K) was contracted by NCDOT to conduct the freshwater mussel and fish surveys targeting the Atlantic Pigtoe and Cape Fear Shiner.

2.0 Waters Affected

The Lower Little River is located in the Cape Fear River Basin (HUC# 03030004). From the project location, the Lower Little River flows approximately 6.5 stream miles to the Cape Fear River.

2.1 NPDES Dischargers

There are no NPDES permitted dischargers located such that they could affect the water quality in the Lower Little River at the project site.

2.2 303(d) Classification

The Lower Little River is not on the North Carolina Department of Environmental Quality (NCDEQ) - Division of Water Resources 2016 303(d) list of impaired streams or the 2018 draft list.

3.0 Target Species Description

3.1 Atlantic Pigtoe (*Fusconaia masoni*)

3.1.1 Characteristics

The Atlantic Pigtoe (*Fusconaia masoni* (Conrad 1834)) is a small, freshwater mussel that rarely exceeds 60 mm in length. The shells are usually compressed and have a sub-rhomboid outline; however, specimens from headwater streams tend to be more elongate than those found in larger waterways. The umbo extends well above the dorsal margin and the posterior ridge is angular and very distinct. The periostracum is yellowish brown or greenish brown with a parchment-like texture. The nacre is somewhat shiny and can be white, salmon, orange or iridescent blue.

Maximum age for the Atlantic Pigtoe is approximately 58 years and it is a short-term brooding (tachytictic) species. Specifically, the species becomes gravid and releases glochidia multiple times between late June through early July. Identified fish hosts for this species include the Bluegill (*Lepomis macrochirus*) and Shield Darter (*Percina peltata*).

3.1.2 Distribution and Habitat Requirements

The Atlantic Pigtoe is a southern Atlantic Slope species that is found from the James River basin in Virginia south to the Altamaha River basin in Georgia. Within North Carolina, the Atlantic Pigtoe historically inhabited the Roanoke, Tar-Pamlico, Neuse, Cape Fear, Yadkin-Pee Dee, and Catawba river basins. It appears that this mussel may be extirpated from the North Carolina portion of the Catawba River basin and potentially some areas within all river basins.

The Atlantic Pigtoe occupies riffles and runs in medium to large streams. Specifically, it typically inhabits moderately fast velocity areas that contain stable gravel, or sand and gravel substrate.

3.2 Cape Fear Shiner (*Notropis mekistocholas*)

3.2.1 Characteristics

The Cape Fear Shiner (*Notropis mekistocholas* (Snelson 1971)) is a small (approximately 50 mm long), yellowish minnow with a black band along the lateral line. The shiner also has yellow fins, a black upper lip, and a lower lip that bears a thin black bar. The Cape Fear Shiner forages primarily on plant and animal material. In addition, the digestive tract of the Cape Fear Shiner is long and coiled, unlike most other minnows within the genus *Notropis*.

3.2.2 Distribution and Habitat Requirements

The Cape Fear Shiner is endemic to the upper Cape Fear River Basin in the Central Piedmont of North Carolina. The species is known from tributaries and mainstreams of the Cape Fear, Deep, Haw and Rocky Rivers in Chatham, Harnett, Lee, Moore and Randolph counties.

This shiner is generally associated with gravel, cobble, and boulder substrates, and has been observed in slow pools, riffles, and slow runs. These areas occasionally support Water Willow (*Justicia americana*), which may be used as cover or protection from predators (e.g. Flathead Catfish (*Pylodictis olivaris*), bass (*Micropterus* spp.) and crappie (*Pomoxis* spp.)). The Cape Fear Shiner can be found swimming in schools of other minnow species but is never the most abundant species.

4.0 Survey Efforts

Freshwater mussel and fish surveys were conducted in association with this project by RK&K personnel Neil Medlin (Permit # 18-ES00030), Matt Martin and Hal Bain on June 21, 2018. The survey location was moved from the project site downstream to NC 217. The NC 217 crossing was selected due to the presence of extended reaches of shallow water which allowed for more effective survey efforts. The NC 217 location also increased the potential for colonization of the survey reach by the target species from Cape Fear River populations.

4.1 Stream Conditions at Time of Survey: Lower Little River at NC 217

The Lower Little River at NC 217 was twenty-seven meters wide and exhibited run and riffle flow regimes. The banks were approximately two meters high with some erosion/undercutting present. The maximum depth was 1.5 meters with an average depth of 0.5 meter. The substrate was primarily sand and gravel with clay, cobble and boulder also present. No beaver activity was observed at the survey location. A moderate width, forested buffer is present within the survey location.

4.2 Methodology

4.2.1 Mussels

A mussel survey was conducted from approximately 400 meters downstream of the bridge crossing to approximately 100 meters upstream of the crossing for a total of approximately 500 meters. Areas of appropriate habitat were searched, concentrating on the stable habitats preferred by the target species. Visual surveys were conducted with view buckets (bathyscopes) along with tactile methods that were employed where appropriate. All freshwater bivalves were recorded and returned to the substrate. Timed survey efforts typically provide Catch Per Unit Effort (CPUE) data for each species.

4.2.2 Fish

A fish survey was conducted from approximately 400 meters downstream of the bridge crossing to approximately 100 meters upstream of the crossing for a total of approximately 500 meters. The survey was conducted using a Smith-Root Model LR-24 backpack electrofishing unit and dip nets. The stream was sampled with one biologist operating the electrofishing unit while the other biologists collected the stunned fish with dip nets. All stunned fish were collected and temporarily placed in a 5-gallon bucket. All fish were identified and released onsite.

5.0 Results

5.1 Mussels

A total of 2.25-person hours of survey time were spent in the survey reach with three freshwater mussel species and one freshwater clam observed. No Atlantic Pigtoe were observed during the survey.

Table 1. CPUE for Freshwater Mussels in the Lower Little River, June 21, 2018

Scientific Name	Common Name	# live	#shells	Abundance/ CPUE
Freshwater Mussels				CPUE
Elliptio complanata	Eastern Elliptio	8	0	3.56/hr.

Elliptio roanokensis	Roanoke Slabshell	7	0	3.1/hr.
Freshwater Clams				
Corbicula fluminea	Asian Clam			R-C*

* R=Rare, C=Common

5.2 Fish

Fifteen fish species were identified during the survey with a total of 474 individuals observed (Table 2). No Cape Fear Shiners were collected. A total of 1202 shocking seconds were utilized during this survey.

Table 2. Fish Species in the Lower Little River, June 21, 2018

Scientific Name	Common Name	No. Individuals
Cyprinella analostana	Satinfin Shiner	45
Lepomis macrochirus	Bluegill	4

Notropis hudsonius	Spottail Shiner	5
Micropterus sp.	Bass	2

Scientific Name	Common Name	No. Individuals
Total Number of Individuals		474
Total Number of Species		15
Electrofishing Seconds		1202

6.0 Discussion/Conclusions

The mussel and fish surveys did not document either of the target species. Based the survey results and the distance from the project site to closest NCHNP EO (over 18 stream miles to a historical EO), completion of the project will not affect the Atlantic Pigtoe.

Biological Conclusion for Altantic Pigtoe: No Effect

Although no Cape Fear Shiners were collected during the fish survey, an NCNHP EO (located on the Cape Fear River) is slightly over 10 stream miles from the project site. Given the mobility of the species and the relative proximity of the known occurrence, the presence of the Cape Fear Shiner at the project location cannot be completely discounted.

Biological Conclusion for Cape Fear Shiner: May Affect; Not Likely to Adversely Affect

Annual Avg Daily Traffic (veh/hr/day):	Design/Future: 9100 Year: 2040	Existing: 5700 Year: 2016
General Project Narrative: (Description of Minimization of Water Quality Impacts)	The project will replace Cumberland County Bridge #69 and its approaches. The proposed replacement is 197' long with a clear roadway of 32'. This structure provides 2-12' travel lanes with 4' shoulders. The proposed bridge will have 1.5:1 abutments and 4' caps at the end bents. Placement and construction of the proposed bridge, end bents, caps, and associated roadway fill will not result in any wetland or similar environmental impacts. There will be no permanent channel changes. STORMWATER CONTROLS: The proposed bridge does utilize deck drains, but no water discharging from these drains is discharging over open water. The discharge on the left side of the bridge discharges through an inlet/pipe system outside of the jurisdictional stream at non-erosive velocities. Additionally, the entire length of the existing ditch on the right side of the bridge will have a proposed special cut ditch with 3:1 or flatter side slopes. This ditch becomes a lateral base ditch that discharges to rip rap at the embankment of Little River at non-erosive velocities. The entire length of this proposed ditch is listed in the "Swales" summary sheet. Roadway runoff is treated via vegetated roadway shoulders and existing/proposed vegetated swales prior to entering the stream. Class II riprap will be placed under the bridge on either side of the channel at a minimum elevation of one foot above the natural water surface to provide bank stabilization and prevent impacts to the stream.
