STATE OF NORTH CAROLINA
DEPARTMENT OF TRANSPORTATION

MICHAEL F. EASLEY
GOVERNOR

LYNDO TIPPETT
SECRETARY

September 10, 2007

U.S. Army Corps of Engineers
Raleigh Regulatory Field Office
6508 Falls of Neuse Road
Suite 120
Raleigh, NC 27615

ATTN: Mr. Eric Alsmeyer
NCDOT Coordinator

Dear Mr. Alsmeyer:

SUBJECT: **Permit Modification Request for TIP No. R-2809A**, Wake Forest Bypass, From west of Thompson Mill Road to east of Jones Dairy Road, Wake County, Federal Aid No. HPSTP-55 (12), State Project No. 8.1402501:

$570 Debit WBS Element 34503.1.1

Reference: R-2809 Department of the Army Section 404 Individual Permit dated April 4, 2002 (USACE Action ID 199601836)
Division of Water Quality Section 401 Water Quality Certification dated February 26, 2002 (DWQ Project No. 010550)
Neuse Buffer Authorization dated February 26, 2002, (DWQ Project No. 010550)

Please find enclosed with this letter a copy of the final design plans, permit drawings, Ecosystem Enhancement Program (EEP) confirmation letter, a copy of the Hydraulic Review meeting minutes, and the Stormwater Management Plan for R-2809A. The above referenced permits were issued for the entire R-2809 project (Sections A, B & C). Construction on Sections B and C are complete. The permits issued for the R-2809A portion of the project were based on preliminary design. The permit was conditioned so that NCDOT would be required to obtain a permit modification prior to construction of R-2809A. The NCDOT has modified the construction plans and permit drawings to reflect the final design on R-2809A. The purpose of this letter is to request a modification to the Department of the Army Individual Section 404 Permit from the USACE, as well as modification to the Section 401 Water Quality Certification and

Neuse River Buffer Authorization from the DWQ. Also included with this package are revised construction plans for the R-2809C at Buffer Sites 4 and 5 that reflect changes discussed in the field with USACE and DWQ.

Summary of Impacts:
Construction of R-2809A will result in 0.01 acres of permanent fill in non-riverine wetlands, 275 feet of permanent stream impacts, and 79 feet of temporary stream impacts. The original permit accounted for 0.01 acres of permanent fill in non-riverine wetlands, 90 feet of permanent stream impacts, and no temporary stream impacts.

Summary of Mitigation:
The project has been designed to avoid and minimize impacts to jurisdictional areas throughout the NEPA and design processes. However, project impacts will necessitate compensatory mitigation for the unavoidable impacts. The EEP will provide compensatory mitigation for 95 feet of stream impacts and 0.01 acres of non-riverine wetland impacts. Mitigation is not proposed for 180 feet of intermittent stream impacts due to the lack of aquatic habitat. The R-2809A portion of the project was not mitigated for during the original permit application.

The revised design does not compromise NCDOT's compliance with the existing permit conditions. The new impact sites have been evaluated for compliance with the avoidance/minimization criteria and are in compliance with all previous Individual Permit factors, including the following:

- Protected Species,
- Cultural Resources,
- Aquatic Life passage,
- FEMA compliance

RESOURCE STATUS

All impacts to waters of the U.S. occur in the Central Piedmont Ecoregion of the Neuse River Basin within HUC 03020201. Impacts to Waters of the U.S. have increased since the preliminary design was complete (Table 1). A description of the impact sites is included below.

Stream impacts from the construction of the double reinforced concrete box culverts at Station –L- 32+40 were permitted and constructed as part of R-2809B. Permit drawings and design plans are included for this site because work associated the paving of R-2809A will occur at Station –L- 32+40.

Table 1-Impacts to Waters of the U.S. on R-2809A

Site Number	Original Site Number	Final Design Fill Wetlands (ac)	Preliminary Design Fill in Wetlands (ac)	Final Design Permanent Channel Impacts (feet)	Preliminary Design Permanent Channel Impacts (feet)	Final Design Temporary Channel Impacts (feet)	Preliminary Design Temporary Channel Impacts (feet)
1	1 & 2	0.01	0.01	95	90	23	0
2	NA*			62**	0	20	0
3	NA*			118**	0	36	0
Total		0.01	0.01	275	90	79	0

*Streams were not reviewed during the original verification.
**Intermittent streams that will not require mitigation.

REVISIONS **RESULTING IN** JURISDICTIONAL IMPACT CHANGES TO WATERS OF THE U.S. on R-2809A

Site 1-UT1 to Horse Branch (Original permitted as Site numbers 1 and 2), Sheets 4 and 5 of 19

Station –L- 9+25

On the north side of existing NC 98, the existing 40-inch corrugated metal pipe (CMP) in UT1 to Horse Branch (UT1) will be extended with a junction box and a 48-inch corrugated steel pipe (CSP). A 24-inch CSP will also convey water from a lateral base ditch east of UT1 into the new 48-inch CSP. Construction of the lateral base ditch will allow for the removal of an existing concrete ditch. Two preformed scour holes will also be constructed at the outlet of the two 16-inch CSPs carrying storm water from the roadway and discharging prior to entering the buffer. Extension of the pipe and the associated work will result in 0.01 acre of fill in non-riverine wetlands, 95 feet of permanent stream impacts and 23 feet of temporary stream impacts in UT 1.

Impact change: increase of 5 feet of permanent impacts to UT1 to Horse Branch
increase of 23 of temporary impacts to UT1 to Horse Branch

Site 2-UT2 to Horse Branch, Sheets 8 and 9 of 19

Station –L- 13+50

An existing 18-inch concrete pipe will be replaced with a 24-inch CSP in UT2 to Horse Branch (UT2). Two preformed scour holes will also be constructed at the outlets of the two 15-inch CSPs carrying storm water from the roadway, one on the east and one on the west side of UT2. Replacement of the pipe and the associated work will result in 62 feet of permanent stream impacts and 20 feet of temporary stream impacts in UT2. Impacts to UT2 were not originally permitted in the original permit because the stream was not identified during the original delineation and verification. No mitigation is proposed at this site because the stream was determined to be intermittent and no signs of aquatic life were found during the onsite verification with Brian Wrenn of the DWQ on October 15, 2004. Eric Alsmeyer of the USACE deferred to the DWQ.

Impact change: increase of 62 feet of permanent impacts to UT2 to Horse Branch
increase of 20 of temporary impacts to UT2 to Horse Branch

Site 3-UT2 to Horse Branch, Sheet 13 and 14 of 26
Station –Y1- 10+30
A new 30-inch CSP will be placed in UT2 to allow for the construction of a proposed access road. The crossing of UT2 at Site 3 is located approximately 120 feet to the north (downstream) of Site 2. Construction of the 30-inch pipe and the associated work will result in 118 feet of permanent stream impacts and 36 feet of temporary stream impacts in UT2. Impacts to UT2 were not originally permitted in the original permit because the stream was not identified during the original delineation and verification. No mitigation is proposed at this site because the stream was determined to be intermittent and no signs of aquatic life were found during the onsite verification with Brian Wrenn of the DWQ on October 15, 2004. Eric Alsmeyer of the USACE deferred to the DWQ.

Impact change: increase of 118 feet of permanent impacts to UT2 to Horse Branch
increase of 36 feet of temporary impacts to UT2 to Horse Branch

FEDERALLY PROTECTED SPECIES

Plants and animals with federal classification of Endangered (E) or Threatened (T) are protected under provisions of Section 7 and Section 9 of the Endangered Species Act of 1973, as amended. The U.S. Fish and Wildlife Service (FWS) lists 3 federally protected species for Wake County (Table 2). No changes in the county species list has occurred since the original surveys were conducted. A re-survey for Michaux's sumac was conducted on June 20, 2007 and no specimens were found.

The bald eagle was delisted as of August 8, 2007 and is no longer protected by the Endangered Species Act. It is, however, protected under the Bald and Golden Eagle Protection Act. This project will have no effect on the bald eagle since no habitat is present in the project area.

Table 2. Federally Protected Species for Wake County

Scientific Name	Common Name	Habitat Present	Status	Biological Conclusion
Picoides borealis	Red-cockaded woodpecker	No	E	No Effect
Alasmidonta heterodon	Dwarf wedgemussel	No	E	No Effect
Rhus michauxii	Michaux's sumac	Yes	E	No Effect

CULTURAL RESOURCES

Historic Architecture:
In a letter dated December 27, 1995, included in Appendix B of the Finding of No Significant Impact (FONSI), the State Historic Preservation Office (SHPO) concurred that the project will have no effect on Crenshaw Hall and the William Thompson House is outside of the area of potential effects. On December 21, 1995 SHPO signed a concurrence form, that is included in Appendix B of the FONSI, stating that the project would have no effect on the Purefoy-Dunn Plantation.

Archaeology:
An archaeology survey on Archeological Site 31WA175 was conducted on August 19, 1994. No archeological evidence was recorded during the investigation. The investigation concluded that the proposed project would not adversely impact prehistoric archeological site 31WA175. The SHPO concurred with these findings in a memorandum dated July 20, 1994 that is included in the Environmental Assessment.

NEUSE RIVER BASIN BUFFER RULES

This project is located in the Neuse River Basin and is subject to the Neuse River Basin Buffer Rules. Impacts to the Neuse River Basin on R-2809A were approved for 19,936 ft^2 based on the preliminary design in the original buffer certification dated February 26, 2002. Final design buffer impacts total 43,382ft^2. Listed below is a summary of the changes to Neuse River Basin Buffers and required mitigation.

Table 3-Neuse River Basin Buffer Rule Impacts

Site Number	Original Site Number	Final Design Buffer Zone 1 Impacts (sqft)	Preliminary Design Buffer Zone 1 Impacts (sqft)	Impact Change (sqft)	Final Design Buffer Zone 2 Impacts (sqft)	Preliminary Design Buffer Zone 2 Impacts (sqft)	Impact Change (sqft)
1	1	5,651	1,787	**3,864**	3,283	1,432	**1,851**
2	NA	4,338		**4,338**	2,788		**2,788**
3	NA	7,556		**7,556**	4,198		**4,198**
NA	3		7,395	**-7,395**		9,322	**-9,322**
Total		25,814	9,182	**16,632**	17,568	10,754	**6,814**

Table 4-Neuse River Buffer Mitigation Summary

Site #	Allowable Buffer Impacts (sqft)	Allowable with Mitigation (sqft)
1	8,934	
2	7,126	
3		11,754
Total	16,060	11,754

REVISIONS **RESULTING IN** CHANGES TO NEUSE RIVER BASIN BUFFERS on R-2809A

Site 1, Sheets 4 and 5 of 19
Station -L- 9+25
The construction area was increased slightly in order to facilitate construction equipment. Impacts at this site are considered allowable because they occur from a road crossing that impacts between 40 and 150 linear feet and buffer impacts are less then 1/3 of an acre.
Impact change: Increase of 5,715 ft^2 of allowable Buffer impacts

Site 2, Sheets 8 and 9 of 19
Station -L- 13+50
Impacts at Site 2 were not originally permitted in the original permit because the stream was not identified during the original delineation and verification. Buffer impacts occur from the replacement of an existing 18-inch concrete pipe in UT2 to Horse Branch (UT2) with a 24-inch CSP. Two preformed scour holes will also be constructed at the outlets of the two 15-inch CSPs carrying storm water from the roadway, one on the east and one on the west side of UT2. Impacts at this site are considered allowable because they occur from a road crossing that impacts between 40 and 150 linear feet and buffer impacts are less then 1/3 of an acre.
Impact change: Increase of 7,126 ft^2 of allowable Buffer impacts

Site 3, Sheets 13 and 14 of 19
Station –Y1- 10+30
Impacts at Site 3 were not originally permitted in the original permit because the stream was not identified during the original delineation and verification. Buffer impacts occur from the placement of a 30-inch pipe for an access road. Impacts at this site are considered allowable with mitigation because they occur from a road crossing that impacts greater then 150 linear feet.
Impact change: Increase of 11,754 ft^2 of Buffer impacts requiring mitigation

Old Site 3,
Station –Y2- 15+45-
This site was reviewed by Brian Wrenn from DWQ and Brett Feulner from the NCDOT on October 15, 2004 and the determination was made that this site is not subject under the Neuse River Basin Buffer Rules. This site was shown in the original application as subject to the buffer rules but not as a jurisdictional stream.
Impact change: Decrease of 16,717 ft^2 of Buffer impacts requiring mitigation

REVISIONS **RESULTING IN NO** CHANGES to NEUSE BUFFER IMPACTS on R-2809C

Sites 4 and 5
Station –L-82+20 to Station –L-86+36
The NCDOT requested a permit modification on September 7, 2005 that included work on R-2809C at Sites 4 and 5. The modification was issued on September 30, 2005. The modification was requested to comply with the Neuse River Buffer Rules and to provide stability for a relocated channel at its tie in with Smith Creek. On May 30, 2006 the NCDOT Division 5 Construction Office sent the proposed project to prospective bidders. The only bid that was received was significantly higher then the NCDOT's estimate. The project was advertised a second time for bids on July 21, 2006 and no bids were received. During August 2006, Division 5 became aware that Public Service Company of North Carolina (PSCNC) had deviated from an encroachment agreement and open cut through Sites 4 and 5 as well as Smith Creek. Representatives from NCDOT, the USACE, DWQ and PSCNC meet onsite on March 12, 2007 to review the site and discuss how to proceed with plans to stabilize the site. As a result of this deviation, the NCDOT has revised the design plans at these sites. The revised plans do not affect the previously permitted impact quantities; therefore the permit drawings have not been revised. The changes discussed and agreed to in the field are highlighted below.

Station 82+20 to 82+95 –L- Rt
The NCDOT proposes to convert the existing lateral 2-foot base ditch with Class I riprap to a lateral swale/ ditch with rock checks. This will provide treatment of stormwater runoff prior discharging into the riparian buffer.

Station 83+80 to 84+20 –L- Lt
The NCDOT proposes to convert the existing lateral 2-foot base ditch with Class I riprap to a lateral swale/ ditch with rock checks. This will provide treatment of stormwater runoff prior discharging into the riparian buffer.

Station 84+20 to 84+55 –L- Lt
The NCDOT proposes to install a 24-inch and 42-inch RCPs with a junction box with a manhole. NCDOT also proposes to re-grade the floodplain, remove excess riprap and reconstruct the energy dissipator. These structures serve to convey water from the lateral swale/ ditch with rock checks to Smith Creek.

Station 84+40 to 84+90 –L- Lt
The NCDOT proposes to stabilize fill slopes above headwall and wing wall of existing culvert as directed by the Construction Engineer. This will provide long term stability to the fill slope located above the culvert inlet.

Station 84+63 to 84+80 –L- Lt
The NCDOT proposes to construct a temporary stream diversion and install six cross vanes and step pools at the relocated UT to Smith Creek. The cross vanes and step pools will allow water in the relocated stream to transition from natural ground to Smith Creek.

Station 85+10 to 85+60 –L- Lt
NCDOT proposes to excavate fill material in the wetland to pre-construction natural ground elevations as directed by the Construction Engineer. The temporary fill material will be removed from this wetland.

Station 85+36 to 85+51 –L- Lt and Stations 85+80 to 86+36 –L- Lt
The NCDOT proposes to construct a standard 5 to 8 foot base ditch. The base ditch serves to convey runoff to the relocated UT to Smith Creek.

Station 85+10 to 85+75-L- Lt
The NCDOT proposes to stabilize the stream banks of the relocated UT to Smith Creek. This will provide long term stability to the relocated channel.

PROJECT SCHEDULE

This project has a let date of December 18, 2007 and a review date of October 2, 2007.

MITIGATION OPTIONS

The NCDOT is committed to incorporating all reasonable and practicable design features to avoid and minimize jurisdictional impacts, and to provide full compensatory mitigation of all remaining, unavoidable jurisdictional impacts. Avoidance measures were taken during the planning and NEPA compliance stages; minimization measures were incorporated as part of the project design.

Avoidance:
All wetland areas not affected by the project will be protected from unnecessary encroachment. No staging of construction equipment or storage of construction supplies will be allowed in wetlands or near surface waters.

General avoidance measures incorporated into the project design

- Relocation of utility lines within roadway fill in jurisdictional areas
- No Staging of construction equipment or storage of construction supplies will be allowed in wetlands or near surface waters. Staging areas will be determined by the contractor after the project is let.

- No borrow or waste areas will be located in wetland areas without a permit from the USACE.

Minimization:
Minimization has been employed in the project area to the maximum extent particle. Reduction of fill-slopes at stream/wetland crossings and the selection of alternatives that will minimize wetland impacts will reduce unnecessary wetland takings.

Project Wide Minimization Measures
- Use of 2:1 side slopes in jurisdictional areas.
- All culverts will be buried 20% below the streambed.
- NCDOT BMP's for the protection of surface waters will be strictly enforced during the construction of this project.
- The use of rip rap has been eliminated from stream beds

Site Specific Minimization Measures
- Station –L-9+25- The preformed scour hole has been relocated outside of the buffer

COMPENSATORY MITIGATION

The construction of the R-2809A will result in 0.01 acre of non-riverine wetland fill and 95 feet of stream impacts that will require mitigation within the Neuse River Basin. The project will also require mitigation for impacts to Neuse River Basin Buffer impacts for 7,556ft^2 of Zone 1 Impacts and 4,198ft^2 of Zone 2 Impacts.

Based upon the agreements stipulated in the "Memorandum of Agreement Among the North Carolina Department of Environment and Natural Resources, the North Carolina Department of Transportation, and the U.S. Army Corps of Engineers, Wilmington District" (MOA), it is understood that the North Carolina Department of Environment and Natural Resources Ecosystem Enhancement Program (EEP), will assume responsibility for satisfying the federal Clean Water Act compensatory mitigation requirements for NCDOT projects.

The offsetting mitigation will be derived from an inventory of assets already in existence within the same 8-digit cataloguing unit. The Department has avoided and minimized impacts to jurisdictional resources to the greatest extent possible as described above. The remaining, unavoidable impacts will be offset by compensatory mitigation provided by the EEP program as noted in the enclosed EEP confirmation letter.

REGULATORY APPROVALS

Section 404 Permit: The NCDOT respectfully requests that the USACE modify the above referenced 404 Permit as required for the above-described activities for the proposed project.

Section 401 and Buffer Certification: The NCDOT respectfully requests that the DWQ modify the 401 water quality certification and the Neuse River Buffer Certification as required for the above described activities for the proposed project. In compliance with Section 143-215.3D(e) of the NCAC we will provide $570.00 to act as payment for processing the Section 401 permit application previously noted in this application (see Subject line).

Thank you for your assistance with this project. If you have any questions or need additional information, please contact Brett Feulner at bmfeulner@dot.state.nc.us or (919) 715-1488.

A copy of this permit application will be posted on the DOT website at: http://www.ncdot.org/doh/preconstruct/pe/neu/permit.html.

Sincerely,

E. R. Lusk

1548 Mail Service Center
Raleigh, North Carolina 27699-1548

Dear Dr. Thorpe:

Subject: EEP Mitigation Acceptance Letter:

R-2809A, NC 98 (Wake Forest Bypass) from West of SR 1923 (Thompson Mill Road) to US 1, Wake County

The purpose of this letter is to notify you that the Ecosystem Enhancement Program (EEP) will provide the compensatory stream and nonriparian wetland mitigation and buffer mitigation for the subject project. Based on the information supplied by you on August 29, 2007, the impacts are located in CU 03020201 of the Neuse River Basin in the Central Piedmont (CP) Eco-Region, and are as follows:

Warm Stream:	95 feet
Nonriparian Wetland:	0.01 acre
Buffer Zone 1:	7,556 square feet
Buffer Zone 2:	4,198 square feet

If the buffer impacts or the amount of mitigation required for this project increases, then this mitigation acceptance letter will no longer be valid and a new mitigation acceptance letter will be required.

All buffer mitigation requests and approvals are administrated through the Riparian Restoration Buffer Fund. The NCDOT will be responsible to ensure that appropriate compensation for the buffer mitigation will be provided in the agreed upon method of fund transfer. Upon receipt of the NCDWQ's Buffer Authorization Certification, EEP will transfer funds from Tri-Party MOA Fund into the Riparian Restoration Buffer Fund. Upon completion of transfer payment, NCDOT will have completed its riparian buffer mitigation responsibility for TIP R-2809A. Subsequently,

EEP will conduct a review of current MOA mitigation projects in the river basin to determine if available buffer mitigation credits exist. If there are buffer mitigation credits available, then the Riparian Restoration Buffer Fund will purchase the appropriate amount of buffer mitigation credits from Tri-Party MOA Fund.

During the review of this request, it was noted that this project was not included in the 2007 Impact Projection Database; however, EEP will provide the requested stream and nonriparian wetland mitigation. Depending on the availability and projected need of stream and nonriparian wetland mitigation in this cataloging unit, additional stream mitigation may be required that was not included in the biennial budget submitted to NCDOT on April 2, 2007 (revised April 16, 2007).

EEP commits to implementing sufficient compensatory stream and nonriparian wetland mitigation to offset the impacts associated with this project by the end of the MOA Year in which this project is permitted, in accordance with Section X of the Amendment No. 2 to the Memorandum of Agreement between the North Carolina Department of Environment and Natural Resources, the North Carolina Department of Transportation, and the U. S. Army Corps of Engineers, fully executed on March 8, 2007. If the above referenced impact amounts are revised, then this mitigation acceptance letter will no longer be valid and a new mitigation acceptance letter will be required from EEP.

If you have any questions or need additional information, please contact Ms. Beth Harmon at 919-715-1929.

Sincerely,

James B. Stanfill for

William D. Gilmore, P.E.
EEP Director

Ecosystem Enhancement PROGRAM

August 29, 2007

Mr. Eric Alsmeyer
U. S. Army Corps of Engineers
Raleigh Regulatory Field Office
6508 Falls of the Neuse Road, Suite 120
Raleigh, North Carolina 27615

Dear Mr. Alsmeyer:

Subject: EEP Mitigation Acceptance Letter:

R-2809A, NC 98 (Wake Forest Bypass) from West of SR 1923 (Thompson Mill Road) to US 1, Wake County; Neuse River Basin (Cataloging Unit 03020201); Central Piedmont (CP) Eco-Region

The purpose of this letter is to notify you that the Ecosystem Enhancement Program (EEP) will provide the stream and nonriparian wetland mitigation and the buffer mitigation for the unavoidable impact associated with the above referenced project. As indicated in the NCDOT's mitigation request dated August 29, 2007, stream and nonriparian wetland mitigation from EEP is required for approximately 95 feet of warm stream impacts and 0.01 acre nonriparian wetland impact.

Also, this project will impact buffers located in CU 03020201 of the Neuse River Basin. The total buffer impacts are 7,556 square feet in Zone 1 and 4,198 square feet in Zone 2 with a total buffer mitigation requirement of 28,965 square feet. If the buffer impacts or the amount of mitigation required from EEP increases or decreases for this project, then this mitigation acceptance letter will no longer be valid and a new mitigation acceptance letter will be required. All buffer mitigation requests and approvals are administrated through the Riparian Restoration Buffer Fund (Fund 2982).

The NCDOT will be responsible to ensure that the appropriate compensation for the buffer mitigation will be provided in the agreed upon method of fund transfer. Upon receipt of the NCDWQ's Buffer Authorization Certification, EEP will transfer funds from Fund 2984 (Tri-Party MOA Account) into Fund 2982 and commit to provide the appropriate buffer mitigation to offset the impacts associated with this project.

Stream and nonriparian wetland mitigation associated with this project will be provided in accordance with Section X of the Amendment No. 2 to the Memorandum of Agreement between the N. C. Department of Environment and Natural Resources, the N. C. Department of Transportation, and the U. S. Army Corps of Engineers fully executed on March 8, 2007 (Tri-Party MOA). EEP commits to implement sufficient stream mitigation up to 190 stream credits and 0.02 nonriparian wetland credits to offset the impacts associated with this project by the end of the MOA year in which this project is permitted. If the above referenced impact amounts are revised, then this mitigation acceptance letter will no longer be valid and a new mitigation acceptance letter will be required from EEP.

If you have any questions or need additional information, please contact Ms. Beth Harmon at 919-715-1929.

Sincerely,

James B. Stanfill for

William D. Gilmore, P.E.
EEP Director

John Hennessy-NCDWQ	(present)
Travis Wilson-NCWRC	(present)
Gary Jordan-USFWS	(absent)
Chris Militscher-EPA	(present)
Brett Feulner-PDEA	(present)

Participants:
Marshall Clawson, NCDOT Hydraulics
Galen Cail, NCDOT Hydraulics
Quang Nguyen, NCDOT Structure Design

It was agreed by all that the permit was not complete. There are a number of potential buffer sites* that may be added. Also, the permit will need to include info at buffer and wetland boundaries including 10 yr discharges and velocities and ditch slopes. Detailed treatment info will also be provided. John stated a 4C review will have to be scheduled to review the complete/updated permit.

A general comment was made to eliminate any rip rap in stream beds.

An impact summary sheet in English was requested.

Permit Site 1 & 2 (Sheet 5):

It was stated the outlet pipe will be realigned to the stream to improve the outlet discharge angle with the stream.

Investigate using a flow spreader at the buffer boundary in the ditch coming from the west. Need to justify reason(s) if unable to use. Need to investigate means for stormwater treatment.

Permit Site 3 (Sheet 17):

Investigate using flow spreaders at the buffer boundary in the ditch and at the pipe outlet. Need to justify reason(s) if unable to use. Why is excavation needed at inlet?

Need stream (intermittent) impact quantities.

Need buffer and stream (intermittent) impact quantities for the 800 CSP crossing Sta 16+50 –Y2-. Why is excavation needed at outlet?

*Depending on the acceptance of additional buffered crossings, it may be necessary to provide flow spreaders, 10 yr discharge and velocity data, treatment info, etc.

Kevin Moore, NCDOT Roadway

*Will meet to review at a later date

A prior 4B was held on 2/18/04. However, due to a number of potential buffer/stream sites that had not been reviewed, it was decided to reschedule the 4B. The buffer/stream "calls" have since been assessed.

Sheet 12:

An intermittent, buffered stream crosses at approximate Sta 10+30 –Y1-. It is buffered up to the 450 outlet under existing NC 98. The drainage that outlets into the buffer will be treated. It is proposed to outlet drainage to a JB along the cross pipe. Therefore, outlet energy dissipated in the JB instead of at the stream banks.

Sheet 14:

There was discussion about removing the existing NC 98 fill, since there will be a realignment, to provide potential mitigation. It is presently proposed just to remove the existing pavement after construction. It was mentioned that it may be difficult to remove the fill during construction since traffic will have to be maintained on site.

Subject: Minutes from Interagency 4C Permit Review Meeting on June 15, 2005 for R-2809A in Wake County

Team Members:

Eric Alsmeyer-USACE	(present)
Christina Breen-NCDWQ	(present)
Travis Wilson-NCWRC	(present)
Gary Jordan-USFWS	(absent)
Chris Militscher-EPA	(present)
Elizabeth Lusk-PDEA	(present)
Chris Murray-NCDOT-DEO	(present)

Participants:
Marshall Clawson, NCDOT Hydraulics
Galen Cail, NCDOT Hydraulics
Vince Rivers, NCDOT Hydraulics
Frank Fleming, Sungate Design Group
Lonnie Brooks, NCDOT Structure Design

Buffer Site 1 (Sheet 5):

Relocate PSH out of buffer.

STORMWATER MANAGEMENT PLAN

Prepared by:

Sungate Design Group, PA

915 Jones Franklin Road

Raleigh, NC 27606

PROJECT INVOLVEMENT

The proposed project is 2.5 kilometers (1.53 miles) in length and will construct a portion of NC 98 Bypass (-L-) on new location. The project also includes relocation and widening existing Falls of Neuse Rd. (-Y2-) and construction of NC 98 Bypass on new location. NC 98 Bypass will be a divided multilane facility with curb and gutter / grass median and grass swales left and right.

The proposed project contains three crossings of Unnamed Tributaries to Horse Creek, one new See Table 1 for a detailed list of the streams and proposed crossings.

Table 1. Stream Crossings

Stream Name	Drainage Area	Proposed Structure
*Site #1 **UT to Horse Creek	105 acres	Exist. 42"CSP/ Extend w/ 48" CSP
*Site #2 UT to Horse Creek	9 acres	24" CSP
Site #3 *UT to Horse Creek	11 acres	30" RCP

*Site numbers correspond to permit drawings

**Extension of Existing Pipe

UT – Unnamed Tributary

A review of the Environmental Assessment and Environmental Sensitivity Maps indicates that the project is located in Water Supply Watershed but the project is more than a mile from the critical area.

POTENTIAL IMPACTS

The project is located within the Town of Wake Forest Corporate Limits, City of Raleigh Corporate Limits and an Unincorporated area of Wake County. The project is located entirely within the drainage basin of the Neuse River and is therefore subject to the requirements of 15A NCAC 2B .0233, the Neuse River Riparian Buffer Rules. The purpose of the Rule is to protect and preserve riparian buffers in the Neuse River Basin to maintain their nutrient removal functions.

The Neuse Riparian Buffer Rules require that a 50-foot wide riparian buffer directly adjacent to surface waters in the Neuse River Basin be maintained. The Rule also requires that concentrated runoff from new ditches or manmade conveyances be converted to diffused flow before the runoff enters the riparian buffer.

BEST MANAGEMENT PRACTICES (BMPs)

As noted in Table 1, the proposed project contains three jurisdictional stream crossings. All three crossings meet the requirements of 15A NCAC 2B .0233(3) requiring treatment of stormwater runoff. The following discusses each crossing, the BMP proposed or a justification for alternative designs:

Site 1 – UT to Horse Creek (-L- Sta. 9+25)

The proposed work at Site 1 involves widening of existing NC 98 and the extension of the existing 42" CSP with a junction box and a 48" RCP. The increase in size is recommended to facilitate burying the outlet invert 0.8' below the existing stream bed. Rip rap will be placed on the banks and not in the stream for outlet bank stabilization. All storm water will be discharged into pre-formed scour holes outside of zone #2 buffer zone. See attached spreadsheet for calculations.

Site 2 – UT to Horse Creek (-L- Sta. 13+50L)

The proposed work at Site 2 involves the construction of new NC 98 Bypass. A proposed 24" CSP will discharge cross-drainage and grass-swale treated stormwater at this site. All other stormwater not treated will be discharged into pre-formed scour holes outside of zone #2 buffer zone.

Site 3 – Horse Creek (-Y1- Sta.17+59.78)

Site 3 is an additional crossing downstream of Site #2 by –Y3-. –Y3- is a proposed new location two-lane roadway for connection of existing NC 98 with –Y-1. The proposed 30" RCP will discharge cross-drainage and grass-swale treated storm water. The roadway drainage system on –Y3- is treated by grass-swales and proposed to be discharged directly into the 30" crosspipe. This direct connection is the result of determination that the topography is too steep to outlet into the riparian area. Since the stormwater is treated the least damaging alternative is to dissipate the energy from the drainage system in a proposed junction box and the 30" RCP. The proposed 30" RCP will be buried in the existing substrate and the outlet banks will be lined with Class 'I' Rip Rap to stabilize the outlet channel.

R-2809B- Site #1 UT to Richland Creek

As described in the Stormwater Plan for the 'B' section of Richland Creek, the proposed work at Site 1 involved construction of -L- and a 2 @ 7' x 6' RCBC on new location and the relocation of a portion of an unnamed tributary to Richland Creek adjacent to -Y2- (Retail Drive). It is required to discharge stormwater from section 'A' at this site. The majority stormwater is proposed to be treated by grass swales. The remainder of the stormwater is proposed to be treated with a 3' base grass swale before entering the riparian area. Because of topography and limits to R/W, check dams will be incorporated to flatten the slope and achieve 2'/sec. Also permanent reinforcement mat is proposed in the swale to maintain stability.

See attached spreadsheet for treatment calculations.

DESIGN DETAILS

Design details for the enhanced grass swales, variable width base ditches and preformed scour holes are shown on the Roadway Design plans.

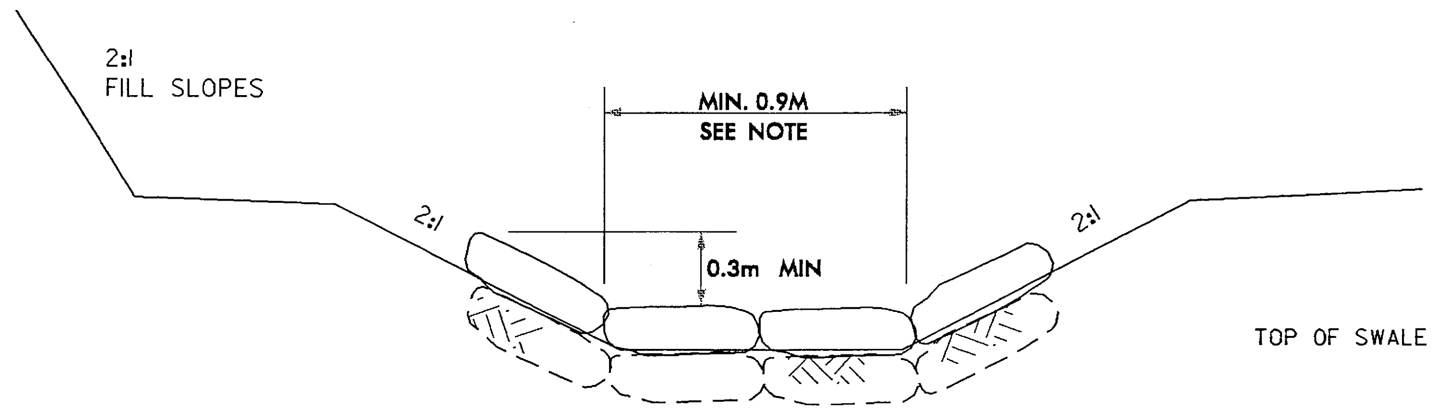
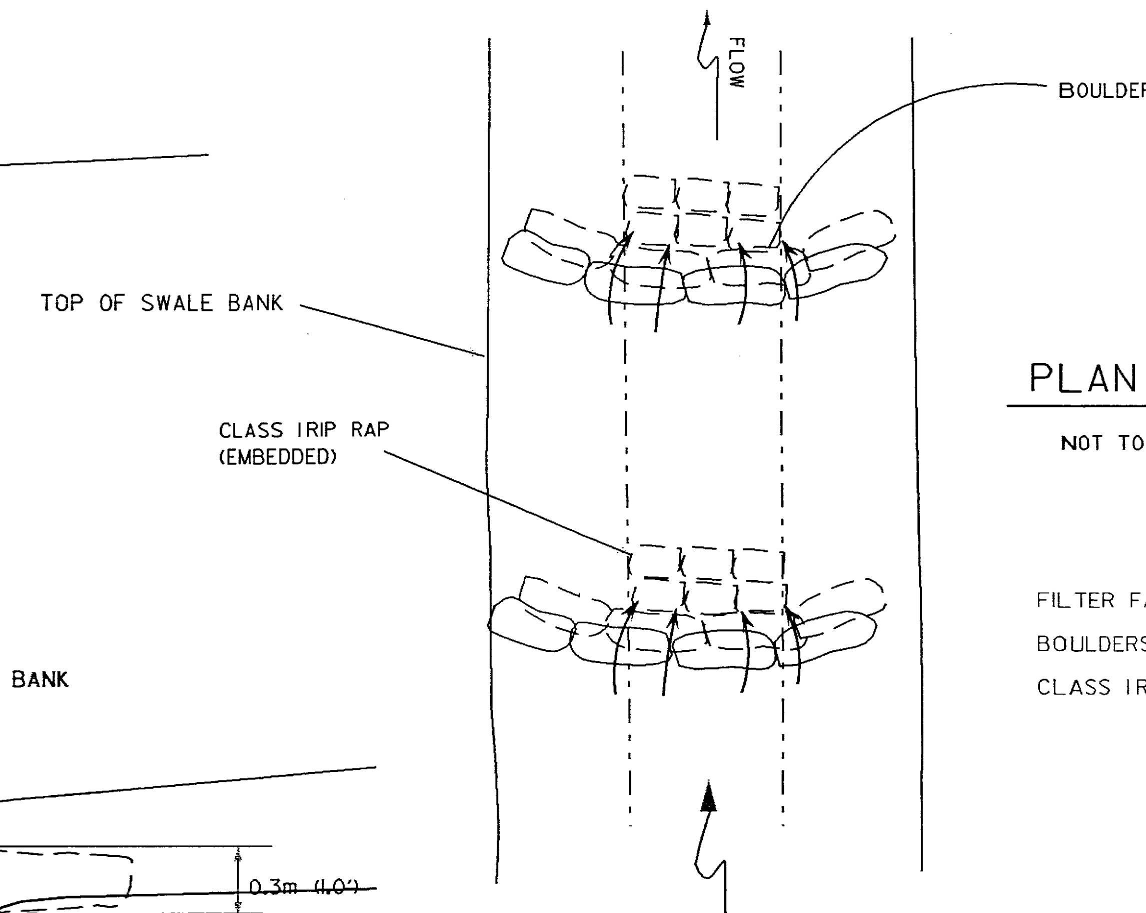
LATERAL SWALE/DITCH W/ROCK CHECKS
STA 31+16 TO 31+38 -L- RT



TYPICAL CROSS SECTION

NOT TO SCALE



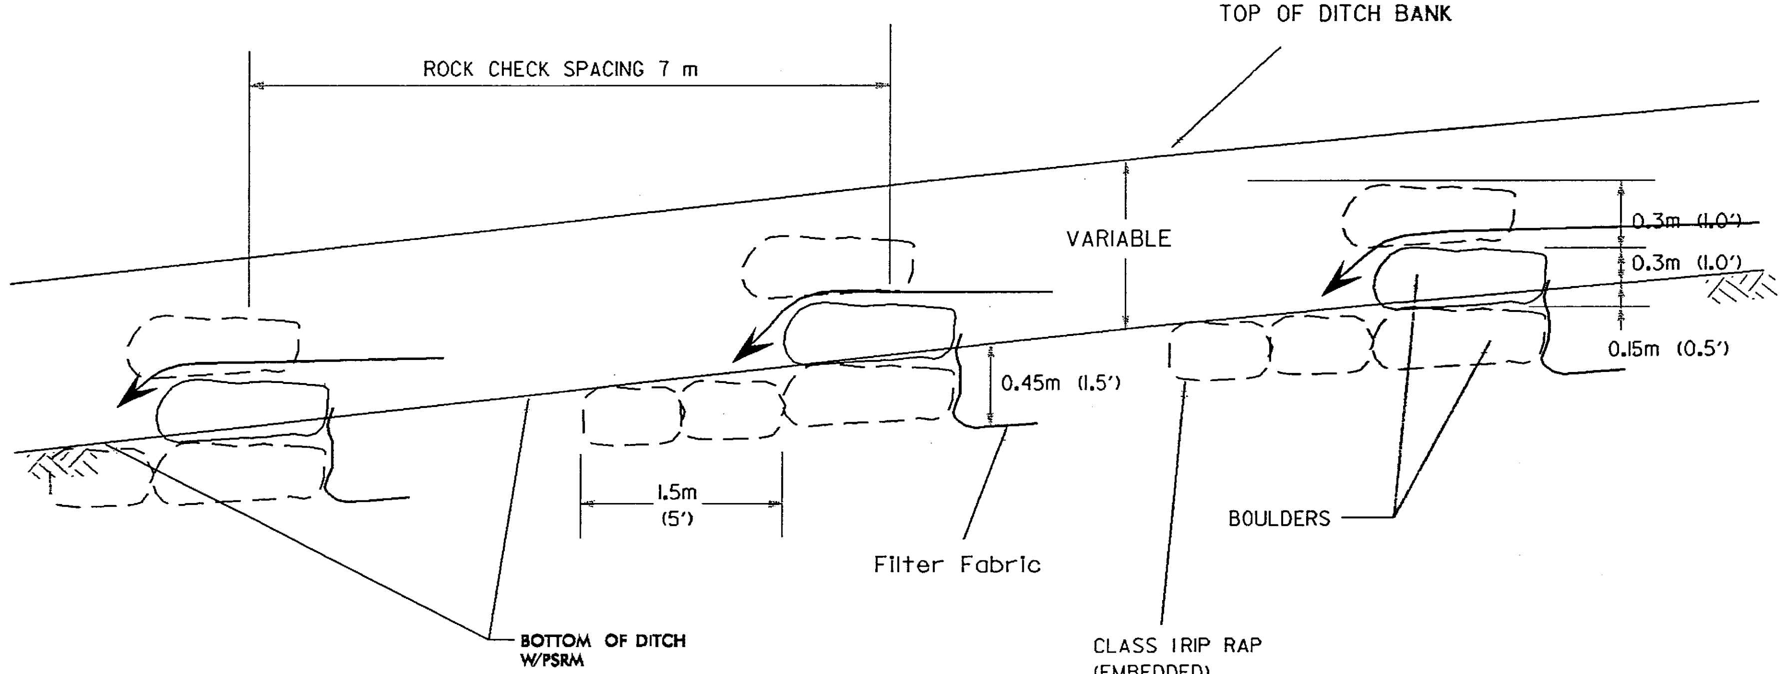
PLAN VIEW

NOT TO SCALE

FILTER FABRIC = $20m^2$

BOULDERS/FOOTER ROCK = 60 MTN

CLASS I RIP RAP = 5 MTN



PROFILE

NOT TO SCALE

NOTE:

BOULDERS SHOULD BE ANGULAR AND OBLONG WITH APPROXIMATE DIMENSIONS OF 0.6m x 0.45m x 0.45m (2' x 1.5' x 1.5'). ROCK SHOULD FIT TIGHTLY TOGETHER WITH MINIMAL VOIDS. STAGGER BOULDER JOINTS.

ROCK CHECK SPACING IS DEPENDENT ON DITCH GRADES AT 1' DROP INTERVALS OR SLOPE CONTROL.

*STRUCTURE NO.'S 78 & 83 OUTLET INTO A DITCH WITH THREE PROPOSED CHECK DAMS. THESE DAMS REDUCE THE SLOPE OF THE DITCH TO ACHIEVE 2.0'/SEC AND THEREFORE TREATMENT OF THESE INLETS. THE REQUIRED LENGTH OF TREATMENT FOR THESE TWO INLETS IS 18M. THE ACTUAL LENGTH IS 23M.

2GI = 2 GRATED INLET
SBG = SHOULDER BERM GUTTER
CB = CATCH BASIN
DDB = DRY DETENTION BASIN
B = BASIN
GS = GRASS SWALE

BDOS = BERM DRAINAGE OUTLET STRUCTURE
OTCB = OPEN THROAT CATCH BASIN
OPEN = OPEN END PIPE
PSH = PRE FORMED SCOUR HOLE
LS = LEVEL SPREADER
CD= CHECK DAMS

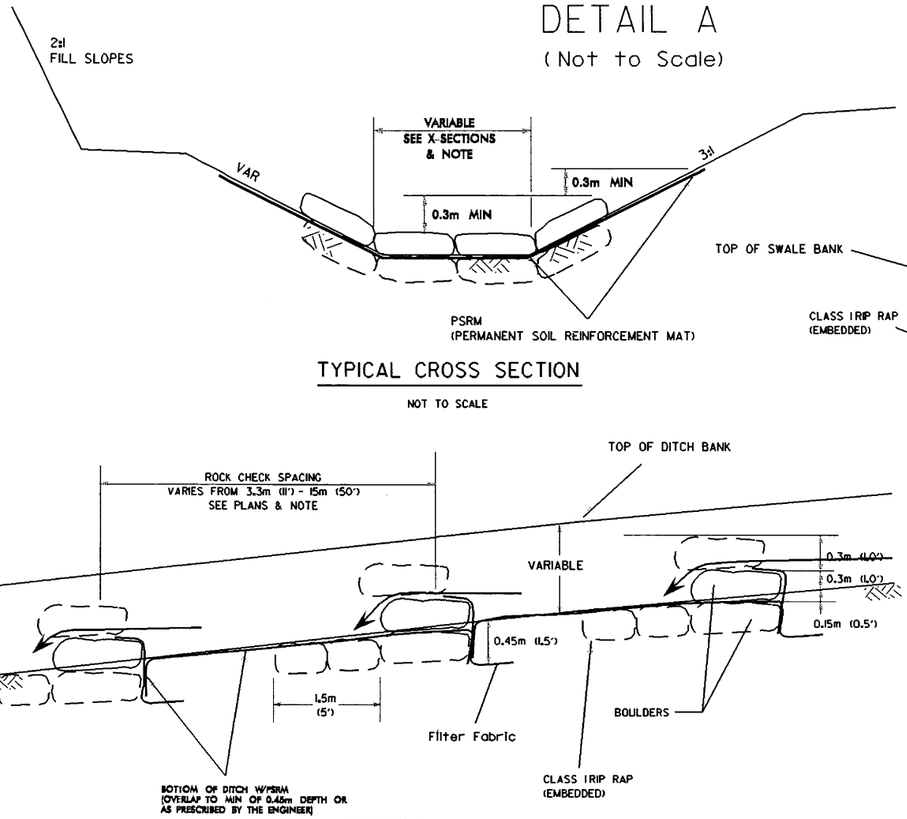
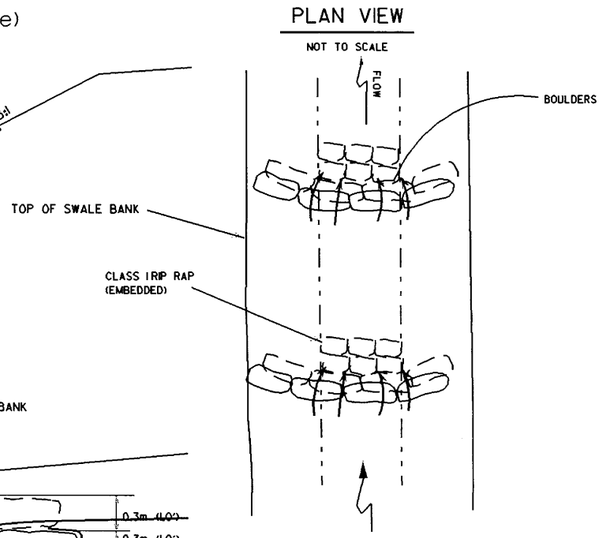
DETAIL A
(Not to Scale)



TYPICAL CROSS SECTION

NOT TO SCALE



PROFILE

NOT TO SCALE

NOTE:

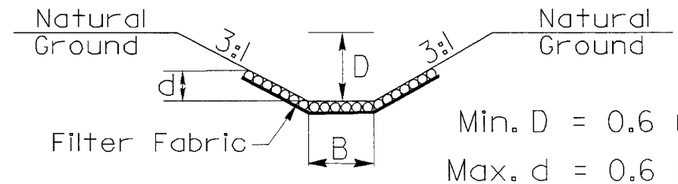
BOULDERS SHOULD BE ANGULAR AND OBLONG WITH APPROXIMATE DIMENSIONS OF 0.6m x 0.45m x 0.45m (2' x 1.5' x 1.5'). ROCK SHOULD FIT TIGHTLY TOGETHER WITH MINIMAL VOIDS. STAGGER BOULDER JOINTS.

ROCK CHECK SPACING IS DEPENDENT ON DITCH GRADES AT 1' DROP INTERVALS OR SLOPE CONTROL.

DITCH WIDTHS VARY. WIDEN TO EXTENT PRACTICAL WITHIN R/W LIMITS. SEE X-SECTIONS.

STANDARD BASE DITCH
STA 85+36 TO 85+51 -L- LT
STA 85+80 TO 86+36 -L- LT

DETAIL B
STANDARD BASE DITCH
(Not to Scale)



Min. D = 0.6 m

Max. d = 0.6 m

B = 1.5-2.4 m

* When B is < 1.8m

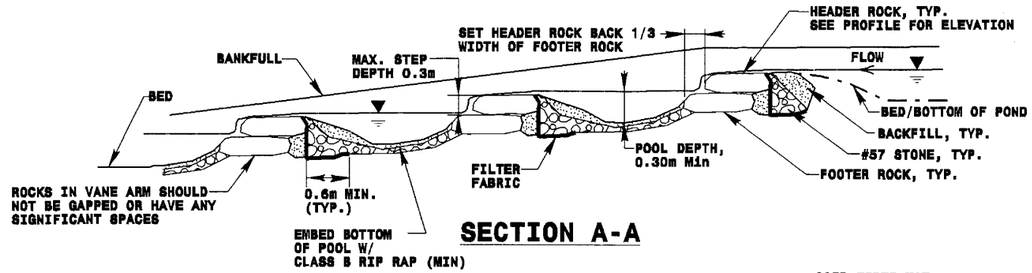
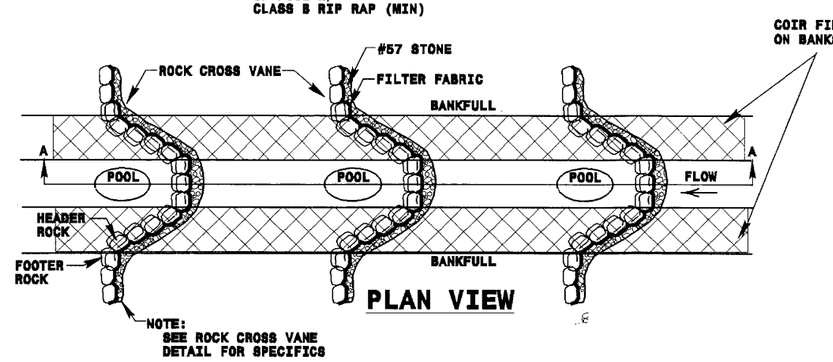
STEP POOL DETAIL

NOT TO SCALE



SECTION A-A

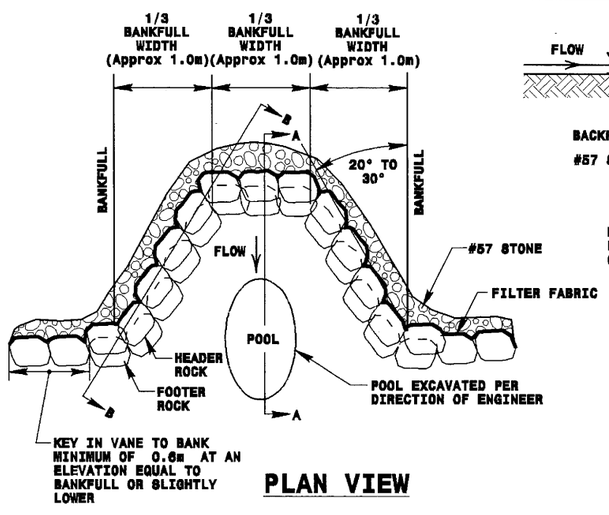


PLAN VIEW

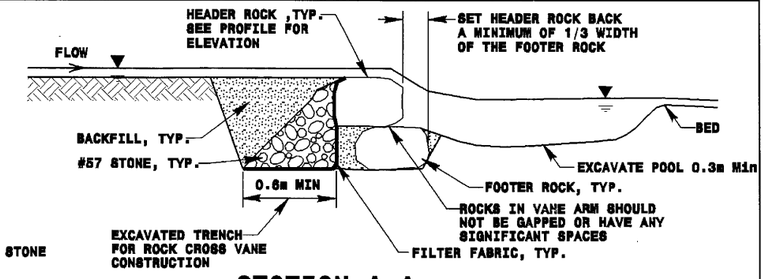
NOTES:
1. STEPS TO BE SHORT, FREQUENT, AND CLOSELY SPACED.
2. POOL SPACING SHALL BE INVERSELY PROPORTIONAL TO STREAM SLOPE, AND DIRECTLY PROPORTIONAL TO BANKFULL WIDTH. (APPROX 6.4m)
3. POOL DEPTHS AT BANKFULL ELEVATION SHALL BE TYPICALLY 2 TO 3 TIMES DEEPER THAN STEP DEPTHS AT BANKFULL ELEVATION.
4. ADEQUATE NUMBER OF FOOTER BOULDERS TO BE USED IN ORDER TO HOLD UP THE BOULDERS AT HEAD OF STEPS DURING HIGH ENERGY/HIGH FLOW EVENTS.
5. STEP POOL DEPTH SHOULD BE 2 TO 3 TIMES BANKFULL DEPTH.

ROCK CROSS VANE DETAIL FOR STEP POOL

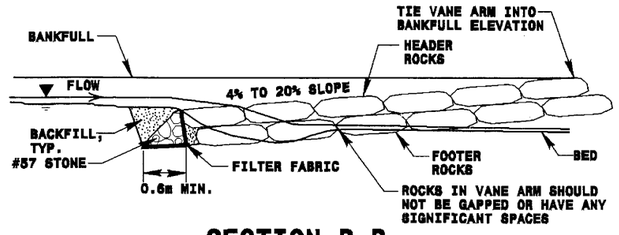
NOT TO SCALE



PLAN VIEW



SECTION A-A



SECTION B-B

	BOULDER DIMENSIONS (meters)		
STATION	HEIGHT	LENGTH	WIDTH
PER VANE	0.6m	0.9m	0.6m

NOTES:
1. DEEPEST PART OF POOL TO BE IN LINE WITH WHERE VANE ARM TIES INTO BANKFULL.
2. DO NOT EXCAVATE POOL TOO CLOSE TO FOOTER BOULDERS.
3. CLASS "A" STONE CAN BE USED TO REDUCE VOIDS BETWEEN HEADERS AND FOOTERS.
4. COMPACT BANKFULL TO EXTENT POSSIBLE OR AT THE DIRECTION OF THE ENGINEER.
5. POOL DEPTH SHOULD BE 2 TO 3 TIMES BANKFULL DEPTH.
