ATTN: Mr. Tom Steffens
NCDOT Coordinator

Subject: **Application for Modification to the Section 404 Individual Permit and Section 401 Water Quality Certification** for Section B of the proposed SR 1923 (Booker Dairy Road) Extension from US 70 Business to US 301 in Johnston County, Federal Aid Project No. STP-1923(2), State Project No. 8.3212101, TIP No. U-3334B. Debit $570 from WBS Number 34929.1.3

Reference: USACE Individual 404 Permit Action ID SAW-2008-02482, issued March 17, 2009, a Permit Modification issued August 25, 2009 and a Permit Renewal issued January 8, 2015.

NCDWR Project No. 20081106 Certification and Neuse Riparian Buffer Authorization, issued November 4, 2008, a Permit Modification issued July 22, 2009 and a Permit Renewal issued January 8, 2015.

Dear Sir:

The purpose of this letter is to request a modification to the United States Army Corps of Engineers (USACE) Section 404 Individual Permit and North Carolina Division of Water Resources Section 401 Certification and Neuse Buffer Authorization for Section B for the above referenced project. The original permit application (submitted July 10, 2008) presented final impacts for U-3334A and preliminary impacts for U-3334B. This modification presents the final design impacts for U-3334B.

Please see the enclosed, North Carolina Division of Mitigation Services (DMS) mitigation acceptance letter, Hydraulic Review Concurrence meeting minutes (4B and 4C), stormwater management plan (SMP), permit drawings, and roadway plan sheets for the U-3334B section.

Table 1– Description of Project Sections for U-3334

Section	Approximate Section Limits	Approximate Length	Construction Letting
U-3334 A	West of SR 1003 (Buffalo Road) to US 70 Business	2.27 miles	January 2009
U-3334 B	West of SR 1003 (Buffalo Road) to US 301	2.12 miles	January 2018
	TOTAL	4.39 miles	

Summary of U-3334B Jurisdictional Impacts:
The preliminary design impacts projected from the original permit application for U-3334B were 176 linear feet of permanent stream impacts, 20,378 square feet of Zone 1 buffers, 7,040 square feet of Zone 2 buffers, and 5.3 acres of permanent impacts to wetlands. Final design impacts for U-3334B are 430 linear feet of permanent impacts to streams, 96 linear feet of bank stabilization, and 54 linear feet of temporary stream impacts, 32,274 square feet of Zone 1 buffers, 12,089 square feet of Zone 2 buffers, and 4.10 acres of permanent impacts to wetlands. The increase in stream impacts from preliminary to final design are due to the preliminary cross section being designed for a two-lane 26-foot roadway with 8-foot shoulders and the final cross section being designed for two 12-foot travels lanes in each direction from Buffalo Road to US301 (Brightleaf Boulevard) with 4-foot paved and 4-foot grassed shoulders and extending project area on White Oak Drive picking up another stream.

Totals of the proposed impacts to individual water resources by each section can be found in Tables 2, 3, and 4.

Table 2. Summary of Wetland Impacts for U-3334

Section	Design Stage	Wetland Impact Type	Wetland Impact Area (ac)	Wetland Impacts Requiring Mitigation (ac)
U-3334A	Final	Permanent Wetland Fill	1.96	2.39
		Excavation in Wetlands	0.02	
		Mechanized Clearing in Wetlands	0.41	
		Hand Clearing in Wetlands	7.02	
		Temp. Clearing in Wetlands	0.21	
U-3334B	Final	Permanent Wetland Fill	3.57	4.11
		Mechanized Clearing in Wetlands	0.54	
			Total	**6.50**

Table 3. Summary of Stream Impacts for U-3334

Section	Design Stage	Stream Impact Type	Impact Length (lf)	Stream Impacts Requiring Mitigation (lf)
U-3334A	Final	Permanent Fill	78	78
		Bank Stabilization	0	
		Temporary	0	
U-3334B	Final	Permanent Fill	430	430
		Bank Stabilization	96	
		Temporary	54	
Total			**658**	**508**

Table 4. Summary of Buffer Impacts for U-3334

Section	Zone 1 Buffer Impacts (sq. ft)	Zone 2 Buffer Impacts (sq. ft)
U-3334A	48,895	20,378
U-3334B	32,274	12,089
Total	**81,169**	**32,467**

IMPACTS TO WATERS OF THE U.S.

Tables 5, 6, and 7 summarize the proposed impacts to jurisdictional water resources for the final design of U-3334B. Site numbers correspond with the permit drawings included in this application. The project is located in the Neuse River Basin HUC 03020201. There is one wetland and three streams located with the project area. All three streams are unnamed tributaries (UTs) to Buffalo Creek. Buffalo Creek carries a North Carolina Division of Water Resources (NCDWR) stream classification of C; NSW and a stream index number of 27-42.

Wetlands

Proposed final permanent impacts are 4.10 acres (Table 5).

Table 5. U-3334B Wetland Impacts

Site	Wetland Number	Riparian or Non-Riparian	Permanent Fill in Wetlands (ac)	Mechanized Clearing (ac)
1	BDB-BZ	Non-Riparian	3.57	0.54
Total Impacts			**4.11**	

Utility impacts

There will be no wetland impacts due to utility relocations or installations. The Town of Smithfield completed the installation of a waterline within the project limits under a Nationwide 12 permit. The installation of the waterline was not due to the transportation project, but due to the Town improving the waterline within the project limits of U-3334B.

Surface Waters

Final permanent stream impacts for U-3334B are 526 linear feet. Temporary stream impacts are 54 linear feet. Table 6 lists the site number, stream name, stream classification, amount of impacts, and amount of mitigation required.

Table 6. U-3334B Stream Impacts

Site	Stream Name	Intermittent/ Perennial	Impact Type	Impact Length (linear feet)
2	UT to Buffalo Creek (SA)	P	Perm. Fill	315
			Bank Stabilization*	32
			Temp Fill	20
3	UT to Buffalo Creek (SB)	P	Perm. Fill	100
			Bank Stabilization*	64
			Temp Fill	24
4	UT to Buffalo Creek (SC)	I	Perm. Fill	15
			Temp Fill	10
			Total Temporary Impacts:	**54**
			Total Permanent Impacts:	**526**
			Permanent Impacts Requiring NCDWR Mitigation[1]:	**315**
			Permanent Impacts Requiring USACE Mitigation:	**430**

[1]Mitigation requirement for permanent impacts for DWR at a 1:1 ratio will be met under the USACE mitigation requirement ratio of 2:1.
*Bank stabilization does not require mitigation.

Utility impacts

There will be no impacts to jurisdictional streams due to utility relocations or installations.

RIPARIAN BUFFER IMPACTS

U-3334B is subject to the Neuse River Basin Buffer Rules. Impacts for each zone are detailed in Table 7.

Table 7. U-3334B Riparian Buffer Impacts

Mitigation requirements (sq. ft.)	Allowable with mitigation*	Allowable with mitigation**	Allowable**	**Total Impacts**	**Impacts Requiring Mitigation**
Zone 1 Impact	8,621	16,523	7,130	**32,274**	**25,144**
Zone 2 Impact	1,639	8,056	2,394	**12,089**	**9,695**

***** Impacts other than Road Crossing ** Road Crossing

MITIGATION OPTIONS

The NCDOT is committed to incorporating all reasonable and practicable design features to avoid and minimize jurisdictional impacts, and to provide full compensatory mitigation of all remaining, unavoidable jurisdictional impacts. Avoidance measures were taken during the planning phase and minimization measures were incorporated as part of the project design. Minimization includes the examination of appropriate and practicable steps to reduce the adverse impacts.

Avoidance and Minimization

Impacts to jurisdictional streams and wetlands could not be avoided. Minimization efforts have taken place continually through the planning and design process and are listed below.

- Design Standards in Sensitive Watersheds will be implemented.
- Runoff from impervious surfaces has been diverted away from surface waters or has been treated using grass swales prior to entering jurisdictional waters.
- Equalizer pipes are used to maintain existing flow patterns through the wetland.
- Riprap pads are utilized at Site 2 outlets for energy dissipation.
- 3:1 slopes in jurisdictional areas where practicable.

Compensatory Mitigation

Compensatory mitigation requirements for the proposed U-3334B are summarized in Table 8 below. Mitigation of impacts jurisdictional streams, wetlands, and buffers will be provided by DMS.

Table 8. Jurisdictional Impacts Requiring Mitigation

Non-riparian Wetland (ac.)		Streams (ft.)	Buffers Zone 1 (sq. ft.)	Buffers Zone 2 (sq. ft.)
4.11 ac. @ 2:1 ratio		430 ft. @ 2:1 ratio	25,144@x3	9,695@x1.5
Totals	**8.22**	**860**	**75,432**	**14,543**

FEDERALLY PROTECTED SPECIES

As of July 13, 2017, the USFWS lists four federally protected species for Johnston County (Table 9).

Table 9. Federally Protected Species Listed for Johnston County

Scientific Name	Common Name	Federal Status	Habitat Present	Biological Conclusion
Alasmadonta heterodon	Dwarf wedgemussel	E	No	No Effect
Elliptio steinstansana	Tar River spinymussel	E	No	No Effect
Picoides borealis	Red-cockaded woodpecker	E	No	No Effect
Rhus michauxii	Michaux's sumac	E	Yes	No Effect

E= Endangered

Surveys were last conducted for Michaux's sumac on May 15, 2017. Habitat is present, but no Michaux's sumac were located during the survey. The biological conclusion is No Effect. Habitat was not found in the study area for dwarf wedgemussel, Tar River spinymussel, and red-cockaded woodpecker. The biological conclusion for these three species is No Effect.

The USFWS has developed a programmatic biological opinion (PBO) in conjunction with the Federal Highway Administration (FHWA), the US Army Corps of Engineers (USACE), and NCDOT for the northern long-eared bat (NLEB) (in eastern North Carolina. The PBO covers the entire NCDOT program in Divisions 1-8, including all NCDOT projects and activities. The programmatic determination for NLEB for the NCDOT program is "May Affect, Likely to Adversely Affect." The PBO provides incidental take coverage for NLEB and will ensure compliance with Section 7 of the Endangered Species Act for five years for all NCDOT projects with a federal nexus in Divisions 1-8, which includes Johnston County, where U-3334B is located.

Bald and Golden Eagle Protection Act (BGPA): In the July 9, 2007 Federal Register (72:37346-37372), the bald eagle was declared recovered, and removed (de-listed) from the Federal List of Threatened and Endangered wildlife. This delisting took effect August 8, 2007. After delisting, the Bald and Golden Eagle Protection Act (Eagle Act) (16 U.S.C. 668-668d) became the primary law protecting bald eagles. Nesting and foraging habitat are not present in the project area, nor have bald eagle nests or individuals have been seen within a 660-foot radius of the project area.

REGULATORY APPROVALS

Application is hereby made for a modification to the Department of the Army Section 404 Individual Permit as required for the above-described activities for the proposed TIP project U-3334B.

We are also hereby requesting a modification of the Individual Section 401 Water Quality Certification and Neuse Riparian Buffer Authorization from the Division of Water Resources. In compliance with Section 143-215.3D (e) of the NCAC, we will provide $570 to act as payment for processing the Section 401 permit modification.

A copy of this modification request will be posted on the NCDOT website at https://connect.ncdot.gov/resources/Environmental/. If you have any questions or need additional information, please contact Deanna Riffey at driffey@ncdot.gov or (919) 707-6151.

Sincerely,

for Philip S. Harris III, P.E., C.P.M., Unit Head
Environmental Analysis Unit

cc: NCDOT Permit Application Standard Distribution List

Environmental Quality

ROY COOPER
Governor

October 6, 2017

Mr. Philip S. Harris, P.E., CPM
Project Development and Environmental Analysis Unit
North Carolina Department of Transportation
1598 Mail Service Center
Raleigh, North Carolina 27699-1598

Dear Mr. Harris:

Subject: EEP Mitigation Acceptance Letter:

U-3334B, Smithfield – SR 1923 (Booker Dairy Road) from Buffalo Road to US 301 (Brightleaf Boulevard, Johnston County

The purpose of this letter is to notify you that the Division of Mitigation Services (DMS) will provide the stream, wetland and buffer mitigation for the subject project. Based on the information supplied by you on October 6, 2017, the stream, wetland and buffer impacts are located in CU 03020201 of the Neuse River basin in the Northern Inner Coastal Plain (NICP) Eco-Region, and are as follows:

Stream and Wetlands	River Basin	CU Location	Eco-Region	Stream			Wetlands		
				Cold	Cool	Warm	Riparian	Non-Riparian	Coastal Marsh
Impacts	Neuse	03020201	NICP	0	0	430.0	0	4.11	0

*Some of the stream and/or wetland impacts may be proposed to be mitigated at a 1:1 mitigation ratio. See permit application for details.

All buffer mitigation requests and approvals are administrated through the Riparian Restoration Buffer Fund. The NCDOT will be responsible to ensure that appropriate compensation for the buffer mitigation will be provided in the agreed upon method of fund transfer. Upon receipt of the NCDWR's Buffer Authorization Certification, DMS will transfer funds from the NCDOT 2984 Fund into the Riparian Restoration Buffer Fund. Upon completion of transfer payment, NCDOT will have completed its riparian buffer mitigation responsibility for TIP Number U-3334B. Subsequently, DMS will conduct a review of current NCDOT ILF Program mitigation projects in the river basin to determine if available buffer mitigation credits exist. If there are buffer mitigation credits available, then the Riparian Restoration Buffer Fund will purchase the appropriate amount of buffer mitigation credits from NCDOT ILF Program.

Buffer	River Basin	CU	Eco-Region	Buffer Impacts		
				Zone 1	Zone 2	TOTAL
Impacts	Neuse	03020201	NICP	25,144.0	9,695.0	34,839.0

The impacts and associated mitigation needs were under projected by the NCDOT in the 2017 impact data. DMS commits to implement sufficient compensatory stream, wetland and buffer mitigation credits to offset the impacts associated with this project as determined by the regulatory agencies using the delivery timeline listed in Section F.3.c.iii of the In-Lieu Fee Instrument dated July 28, 2010. If the above referenced impact amounts are revised, then this mitigation acceptance letter will no longer be valid and a new mitigation acceptance letter will be required from DMS

If you have any questions or need additional information, please contact Ms. Beth Harmon at 919-707-8420.

Sincerely,

James B. Stanfill
DMS Credit Management Supervisor

The 4B meeting began with Paul Atkinson (NCDOT) giving a brief overview of the project and stating he would go through the project sheet by sheet.

Sheets 4 & 5:

No wetlands or jurisdictional streams. No comments.

Sheets 6 & 7:

Paul Atkinson identified wetlands and three proposed equalizer pipes to maintain connectivity between wetlands. No comments.

Sheets 8 & 9:

No wetlands or jurisdictional streams. No comments.

Sheet 10:

Paul Atkinson identified the jurisdictional stream, which currently is piped across the existing road at 90^{o} and ties to a straightened channel between the existing road and a Walmart parking lot. The proposed design is a double barrel box culvert buried 1' and at a skew due to the proposed roadway alignment. Paul indicated there will also be some stream realignment to tie to the proposed culvert. Tom Steffens asked Paul to elaborate on the future culvert. Paul stated that the future plans consist of adding a median and two additional travel lanes which will require the currently proposed culvert to be extended. It was agreed that impacts for channel relocation will be permitted as part of this project, and the future culvert extension will be part of another project and will not be permitted as part of U-3334B. Tom asked how deep the normal flow is in the stream. Brook Anderson said 0.5' to 1'. Rob Ridings asked if this project's main storm water treatment strategy consists of grassed-lined ditches. Paul said, yes. Tom asked if there would be rip rap at the outlet of the culvert, and how the existing channel that is to be filled will be stabilized and flow directed to the proposed channel. Paul replied that yes, there will be rip rap added at the culvert outlet to protect the outlet channel and bank, and also across the proposed fill in existing channel that will form the new channel bank where the channel realignment begins. Tom requested the rip rap locations be shown on the plans.

After the meeting, an analysis of outlet velocities showed that rip rap would be required in the bed of the channel at the outlet of the 60" pipe, due to high outlet velocities from the 60" pipe that ties to the channel at the box culvert outlet.

Sheet 11:

No additional impacts. No comments.

Subject: **FINAL Minutes of the Interagency Hydraulic Design Review "4C" Meeting for U-3334B**: SR 1923 Extension (Booker Dairy Road) from SR 1003 (Buffalo Road) to US 301 (Brightleaf Boulevard)

The "4C" Meeting for U-3334B was held on October 19, 2016 at 9:00 AM in the NCDOT Hydraulics Conference Room, at the Century Center Complex in Raleigh, NC. The following were in attendance:

Participants:

Team Members
Rob Ridings, NCDWR (Present)
Ron Lucas, FHWA (Absent)
Thomas Steffens, USACE (Present)
Gary Jordan, USFWS (Absent)
Travis Wilson, NCWRC (Absent)
Cynthia Van Der Wiele, EPA (Absent)

Support Staff
Paul Atkinson, NCDOT Hydraulics
Wendi Johnson, NCDOT Division 4
Chris Rivenbark, NCDOT-NES
Mark Staley, NCDOT REU (Phone)

Other Attendees
Deanna Riffey, NCDOT-NES
Tatia White, NCDOT Roadway Design
Piotr Stojda, NCDOT Roadway Design
Larry M. James, NCDOT Utilities
Brook Anderson, NCDOT Hydraulics
Michelle Berry, NCDOT Hydraulics
Erik Seiler, NCDOT Hydraulics

The 4C meeting began with Brook Anderson (NCDOT) giving a brief overview of the project and stating she would go through the Wetland and Surface Water Impacts Permit then Buffer Impacts Permit.

Wetland Impacts Permit

Sheets 3& 4:

No Comments.

Sheet 5:

No Comments.

Sheets 6 & 7:

Tom Steffens asked if there will be a separation between the existing ditch at the inlet side of the 24"RCP that runs from south to north and the proposed base ditch that runs east to west, to insure the wetlands will not be drained. Brook Anderson confirmed that there is an existing drive that separates the ditches and the separation will be maintained in the proposed design.

Brook Anderson stated that the red fill slope line shown going across the existing road should be black and the Hydraulics Unit will update the drawings.

Rob Ridings asked if the equalizer pipes will not be buried. Brook Anderson stated the pipes will not be buried.

Wendi Johnson asked if more equalizer pipes could be put in. Wendi Johnson stated in the past they have had issues with large wetlands. Brook Anderson responded that the Hydraulics Unit is okay with additional equalizer pipes being installed, if needed, during construction. Rob Ridings and Tom Steffens were also in agreement.

Sheets 8&9:

Brook Anderson gave an overview of the culvert replacement and stream realignment and indicated rip rap in the stream bed at the outlet of the 3@6'X6' RCBC and 60" RCP was required due to the 60" RCP outlet velocities.

Rob Ridings requested at Site 3 that the rip rap on the right bank of the outlet end of the 7'X6' RCBC be extended past where the proposed ditch ties into the channel to match the left bank. Rob Ridings stated that with increased urbanization erosion could be an issue in the future. Brook Anderson stated that the Hydraulics Unit will look into extending the rip rap.

Sheet 10:

Tom Steffens asked if there will be rip rap on the right bank at the outlet of the 3@6'X6' RCBC and 60" RCP. Brook Anderson stated that there is bank stabilization.

Rob Ridings pointed out the two pipes discharging into sides of the 3@6'X6' RCBC and asked if treatment options were looked at prior to this design. Brook Anderson responded that other options had been looked at but due to other constraints, discharging directly into the culvert was the only option. Rob Ridings stated if this was the only design that would work and other scenarios were looked at, then that should be documented in the SMP. Brook Anderson stated that the Hydraulics Unit will update the SMP.

Paul Atkinson asked NES if the portion of the side channel (coming into the east side of the main channel at the inlet of the 3@6'X6' RCBC) that is currently hatched as surface waters impacts, should be removed from the tabulation if it is not jurisdictional. Chris Rivenbark responded that they will check to see if it is a jurisdictional and will follow up with the Hydraulics Unit if hatching is needed.

After the meeting, Deanna Riffey contacted the Hydraulics Unit and stated NES checked the portion of the side channel at the 3@6'x6' RCBC that is currently hatched as surface waters impacts. The side channel is not a jurisdictional feature and the hatching should be removed to the edge of the main channel.

Sheet 11:

No Comments.

Sheets 12&13:

No Comments.

Sheets 14&15:

No Comments.

Sheet 16:

No Comments.

Buffer Impacts Permit

Sheets 3& 4:

Brook Anderson stated the Hydraulics Unit will update the sheet legend. It should read Mitigable Impacts not Allowable Impacts.

Sheets 5& 6:

No Comments.

Sheets 7& 8:

No Comments.

Sheet 9:

Rob Ridings stated that the Allowable Impacts for the Site 2 relocation of the existing ditch on the Buffer Impact Summary Sheet should be moved to Mitigable because they are parallel impacts.

Project Description

Project Length (lin. miles or feet):	2.124 MI	**Surrounding Land Use:**	residential, agricultural, and commercial

	Proposed Project	**Existing Site**
Project Built-Upon Area (ac.)	ac.	ac.
Typical Cross Section Description:	From Buffalo Rd to White Oakdrive: 2, 12' travel lanes in each direction divided by conc. median with curb and gutter. From White Oak Drive to US 301 (Brightleaf Boulevard): 2, 12' travel lanesin each direction with 4' paved and 4' grassed shoulders	2, 12' travel lanes and total pavement width approximately 24'.
Annual Avg Daily Traffic (veh/hr/day):	Design/Future: 16785 Year: 2038	Existing: 10637 Year: 2018

General Project Narrative: (Description of Minimization of Water Quality Impacts)

The proposed project will upgrade SR 1923 to an urban collector extending SR 1923 (Booker Dairy Road) from SR 1003 (Buffalo Road) to US 301 (Brightleaf Boulevard). Approximately 0.25 miles will be on a new location with the remainder following existing roads.

Two culverts will be replaced. The first existing culvert, at Ava Gardner drive, is a 95" x 67" CMAP that will be replaced with 3 @ 6' x 6' RCBC. The proposed culvert uses sills and a flood plain bench to maintain existing flow depths and to retain bed material in the culvert. The second existing culvert, located at the Walmart drive, is a 128" x 83" CMAP, which will be replaced with 2 @ 7' x 8' RCBC. Both proposed culverts are buried appropriately. This project has storm drain systems that collect road and off-site discharge, Rip Rap pads are utilized at the system outlets for energy dissipation. Existing pipes will be up-sized to meet future development. Equalizer pipes are used to maintain existing flow patterns through wetlands.

Two pipes enter each of the proposed culverts. The two pipes that enter the proposed 3@ 6' x 6' RCBC were routed to enter the culvert due to the low fill height, topography, and culvert orientation preventing the flow from being ditched to the stream.The east pipe entering the 2 @ 7' x 8' RCBC is due to the constraints caused by the proposed fill covering the existing outlet ditch and the nearby 10" steel gas line that prevents the outlet pipe from outletting into the proposed ditch. The west pipe is outfalled into the culvert to prevent having to impact the private property near the westtern bank of the channel.

Additional Comments

Swale ending at -L- 122+88 LT: Total Existing DA: 3.56 ac, Total Proposed DA: 3.71ac. Area is primarily comprised of off-site drainage (2.1 ac Impervious /1.6 ac. Pervious) Proposed project decreases impervious area from 2.6 ac impervious to 2.0 ac impervious by removal of existing businesses/ parking lots in proposed R/W.

Swale ending at -L- 123+08 RT: Total DA: 5.4 ac (3.3 ac Impervious/ 2.1 ac Pervious), includes 3.7 ac from swale ending @ -L- 122+88 RT and 1.7 ac (0.69ac off-site) additional area. The on-site imp. DA decreased from 1.34ac to 1.02 ac. The swale provides 69' of additional treatment prior to entering BZ2 and an additional 54' +/- through the buffers before discharging into channel.

SKEWED MULTI-BARREL CULVERT LOW FLOW CHANNEL SILLS

*NOTES:

1) NATIVE MATERIAL BETWEEN SILLS/BAFFLES IN THE CULVERT SHALL PROVIDE A CONTINUOUS LOW FLOW CHANNEL. NATIVE MATERIAL CONSISTS OF MATERIAL THAT IS EXCAVATED FROM THE STREAM OR FLOODPLAIN AT THE PROJECT SITE DURING CONSTRUCTION. ONLY MATERIAL THAT IS EXCAVATED FROM THE STREAM BED MAY BE USED TO LINE THE LOW FLOW CULVERT BARREL. RIP-RAP MAY BE USED TO SUPPLEMENT THE NATIVE MATERIAL IN THE HIGH FLOW CULVERT BARREL(S). IF RIP-RAP IS USED TO LINE THE HIGH FLOW CULVERT BARREL(S), NATIVE MATERIAL SHOULD BE PLACED ON TOP TO FILL VOIDS AND PROVIDE A FLAT SURFACE FOR ANIMAL PASSAGE. NATIVE MATERIAL IS SUBJECT TO APPROVAL BY THE ENGINEER AND MAY BE SUBJECT TO PERMIT CONDITIONS.

2) SILLS/BAFFLES ARE TO BE 1.0 FT. WIDE, CAST SEPARATELY AND ATTACHED BY DOWELS.

3) TOP OF LOW FLOW SILLS/BAFFLES SHOULD MATCH STREAM BED ELEVATION IN LOW FLOW CHANNEL OF STREAM. (THALWEG)

4) DO NOT SET ELEVATION OF HIGH SILL/BAFFLES ABOVE BANK FULL ELEVATION.

5) ALL WORK INCIDENTAL TO CULVERT CONSTRUCTION.

SKEWED MULTI–BARREL CULVERT LOW FLOW CHANNEL SILLS

*NOTES:

1) NATIVE MATERIAL BETWEEN SILLS/BAFFLES IN THE CULVERT SHALL PROVIDE A CONTINUOUS LOW FLOW CHANNEL. NATIVE MATERIAL CONSISTS OF MATERIAL THAT IS EXCAVATED FROM THE STREAM OR FLOODPLAIN AT THE PROJECT SITE DURING CONSTRUCTION. ONLY MATERIAL THAT IS EXCAVATED FROM THE STREAM BED MAY BE USED TO LINE THE LOW FLOW CULVERT BARREL. RIP–RAP MAY BE USED TO SUPPLEMENT THE NATIVE MATERIAL IN THE HIGH FLOW CULVERT BARREL(S). IF RIP–RAP IS USED TO LINE THE HIGH FLOW CULVERT BARREL(S), NATIVE MATERIAL SHOULD BE PLACED ON TOP TO FILL VOIDS AND PROVIDE A FLAT SURFACE FOR ANIMAL PASSAGE. NATIVE MATERIAL IS SUBJECT TO APPROVAL BY THE ENGINEER AND MAY BE SUBJECT TO PERMIT CONDITIONS.

2) SILLS/BAFFLES ARE TO BE 1.0 FT. WIDE, CAST SEPARATELY AND ATTACHED BY DOWELS.

3) TOP OF LOW FLOW SILLS/BAFFLES SHOULD MATCH STREAM BED ELEVATION IN LOW FLOW CHANNEL OF STREAM. (THALWEG)

4) DO NOT SET ELEVATION OF HIGH SILL/BAFFLES ABOVE BANK FULL ELEVATION.

5) ALL WORK INCIDENTAL TO CULVERT CONSTRUCTION.

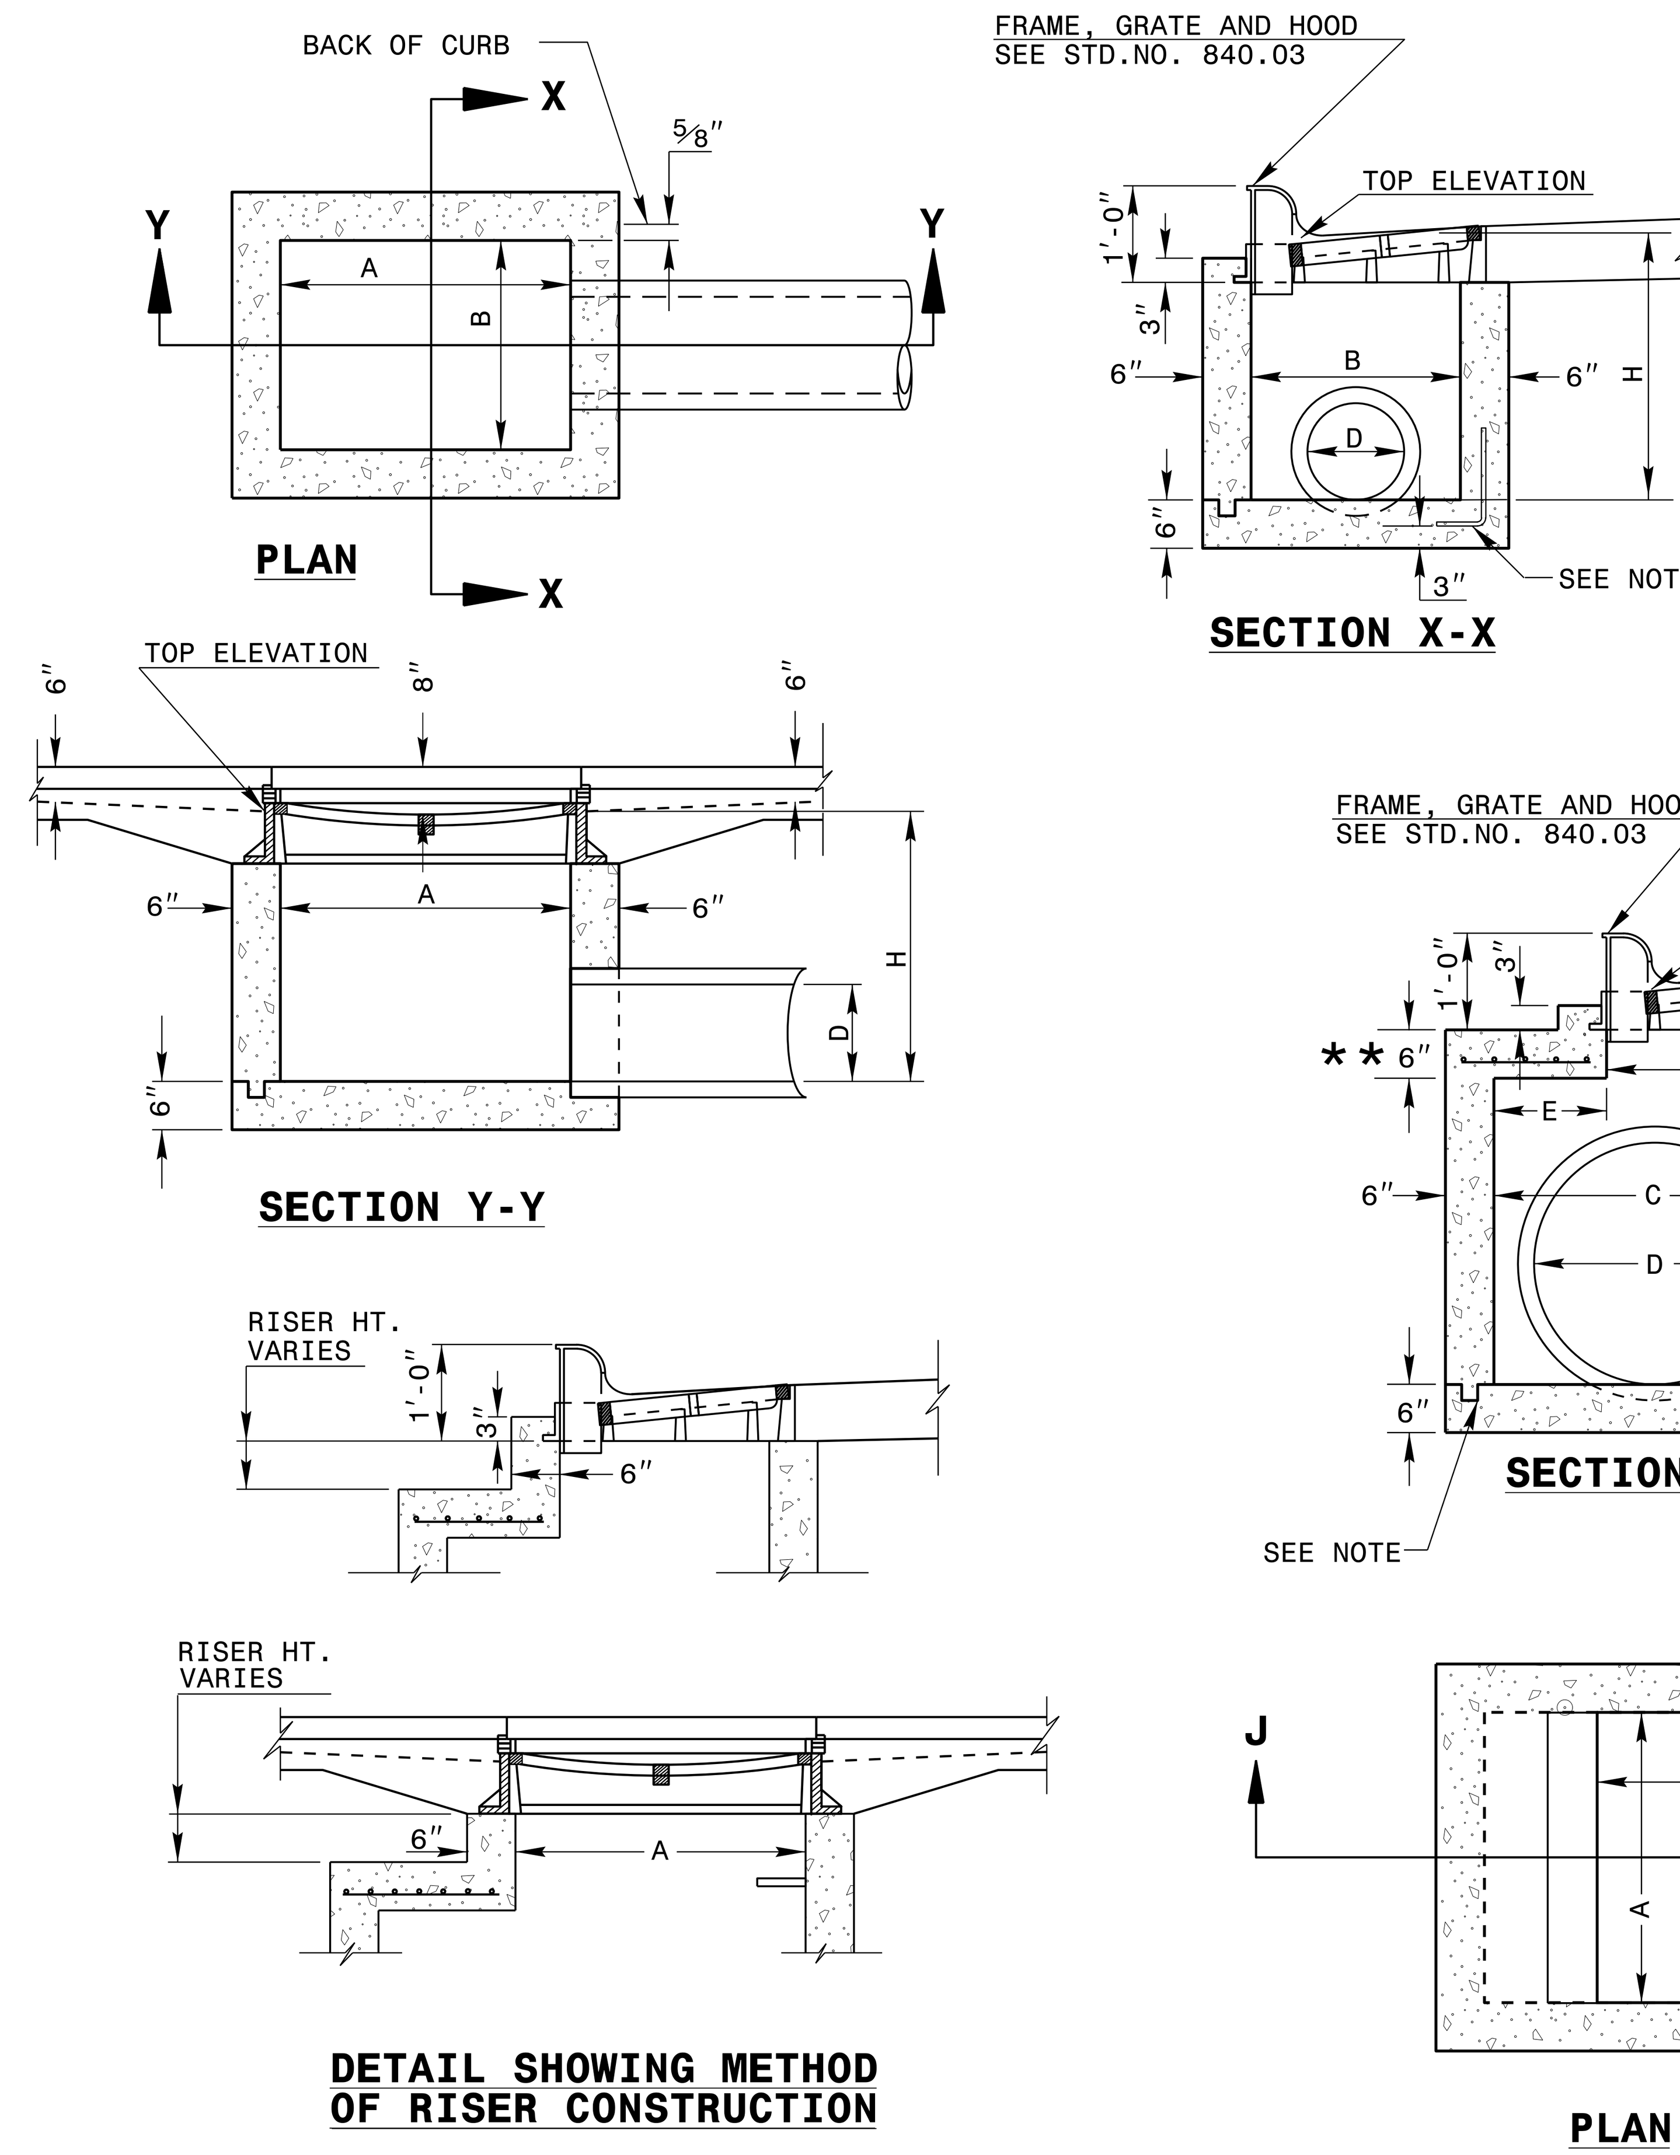
ENGLISH DETAIL DRAWING FOR
MINIMUM DEPTH
CONCRETE CATCH BASIN
12" THRU 84" PIPE

SHEET 1 OF 2
840D02



GENERAL NOTES:

USE CLASS "B" CONCRETE THROUGHOUT.

PROVIDE ALL CATCH BASINS OVER 3'-6" IN DEPTH WITH STEPS 12" ON CENTER. USE STEPS WHICH COMPLY WITH STD. DRAWING 840.66.

OPTIONAL CONSTRUCTION - MONOLITHIC POUR, 2" KEYWAY, OR #4 BAR DOWELS AT 12" CENTERS AS DIRECTED BY THE ENGINEER.

USE FORMS FOR THE CONSTRUCTION OF THE BOTTOM SLAB.

IF REINFORCED CONCRETE PIPE IS SET IN BOTTOM SLAB OF BOX, ADD TO SLAB AS SHOWN ON STD. NO. 840.00.

USE TYPE "E", "F" AND "G" GRATES UNLESS OTHERWISE INDICATED.

FOR 8'-0" IN HEIGHT OR LESS USE 6" WALLS AND BOTTOM SLAB. OVER 8'-0" TO 16'-0" IN HEIGHT USE 8" WALLS AND BOTTOM SLAB. ADJUST QUANTITIES ACCORDINGLY.

CONSTRUCT WITH PIPE CROWNS MATCHING.

CHAMFER ALL EXPOSED CORNERS 1".

** FOR STRUCTURES WITH PIPE LARGER THAN 54", MAKE THE TOP SLAB 8" THICK.

SKEWED MULTI–BARREL CULVERT LOW FLOW CHANNEL SILLS

*NOTES:

1) NATIVE MATERIAL BETWEEN SILLS/BAFFLES IN THE CULVERT SHALL PROVIDE A CONTINUOUS LOW FLOW CHANNEL. NATIVE MATERIAL CONSISTS OF MATERIAL THAT IS EXCAVATED FROM THE STREAM OR FLOODPLAIN AT THE PROJECT SITE DURING CONSTRUCTION. ONLY MATERIAL THAT IS EXCAVATED FROM THE STREAM BED MAY BE USED TO LINE THE LOW FLOW CULVERT BARREL. RIP–RAP MAY BE USED TO SUPPLEMENT THE NATIVE MATERIAL IN THE HIGH FLOW CULVERT BARREL(S). IF RIP–RAP IS USED TO LINE THE HIGH FLOW CULVERT BARREL(S), NATIVE MATERIAL SHOULD BE PLACED ON TOP TO FILL VOIDS AND PROVIDE A FLAT SURFACE FOR ANIMAL PASSAGE. NATIVE MATERIAL IS SUBJECT TO APPROVAL BY THE ENGINEER AND MAY BE SUBJECT TO PERMIT CONDITIONS.

2) SILLS/BAFFLES ARE TO BE 1.0 FT. WIDE, CAST SEPARATELY AND ATTACHED BY DOWELS.

3) TOP OF LOW FLOW SILLS/BAFFLES SHOULD MATCH STREAM BED ELEVATION IN LOW FLOW CHANNEL OF STREAM. (THALWEG)

4) DO NOT SET ELEVATION OF HIGH SILL/BAFFLES ABOVE BANK FULL ELEVATION.

5) ALL WORK INCIDENTAL TO CULVERT CONSTRUCTION.
