4f. List the total estimated acreage of all existing wetlands on the property:

4g. List the total estimated linear feet of all existing streams on the property:

(intermittent and perennial)

#### 4h. Explain the purpose of the proposed project:\*

Exploratory geotechnical borings to aid in designing a replacement for the aging bridge.

#### 4i. Describe the overall project in detail, including indirect impacts and the type of equipment to be used:\*

Approximately 10- 4" borings will occur in the Neuse River via barge and approximately 24- 4" borings will occur in wetlands. Drilling will commence after permit approval and likely be finished by the end of December 2018.

A barge and amphibious/marsh buggy will be utilized as follows:

• Wildlife Access ramp utilized to launch barge, approximately 10 borings in the river channel. Marsh buggy will be used to access end bents and proposed walls adjacent to the channel.

· Cranes will be used to lower the equipment into some areas.

#### 4j. Please upload project drawings for the proposed project.

## E. Impact Justification and Mitigation

1. Avoidance and Minimization

#### 1a. Specifically describe measures taken to avoid or minimize the proposed impacts in designing the project:\*

Drilling equipment will be lowered by crane instead of building access ramps.

#### 1b. Specifically describe measures taken to avoid or minimize the proposed impacts through construction techniques:\*

No clearing will occur in wetlands. Minimal selective clearing will occur in buffers as needed only to allow the drill unit to traverse.

#### 2. Compensatory Mitigation for Impacts to Waters of the U.S. or Waters of the State

2a. Does the project require Compensatory Mitigation for impacts to Waters of the U.S. or Waters of the State? <sup>O</sup> Yes <sup>O</sup> No

#### 2b. If this project DOES NOT require Compensatory Mitigation, explain why:

Impacts are minimal and considered temporary.

NC Stream Temperature Classification Maps can be found under the Mitigation Concepts tab on the Wilmington District's RIBITS website.

## F. Stormwater Management and Diffuse Flow Plan (required by DWR)

\*\*\* Recent changes to the stormwater rules have required updates to this section .\*\*\*

#### 1. Diffuse Flow Plan

1a. Does the project include or is it adjacent to protected riparian buffers identified within one of the NC Riparian Buffer Protection Rules?

• Yes

1b. All buffer impacts and high ground impacts require diffuse flow or other form of stormwater treatment. If the project is subject to a state implemented riparian buffer protection program, include a plan that fully documents how diffuse flow will be maintained.

All Stormwater Control Measures (SCM)s must be designed in accordance with the NC Stormwater Design Manual. Associated supplement forms and other documentation shall be provided.

#### What type of SCM are you providing?

Level Spreader

- Vegetated Conveyance (lower SHWT)
- Wetland Swale (higher SHWT)
- Conter SCM that removes minimum 30% nitrogen
- Proposed project will not create concentrated stormwater flow through the buffer

O No
