Wake Forest, NC 27587

ATTN: Mr. Monte Matthews
NCDOT Coordinator

Subject: **Request for Modification for Section 404 Regional General Permit No. 201902350 and Section 401 Water Quality Certification** for the Interstate 485 (I-485) improvements from I-77 to US 74 (Independence Boulevard), Mecklenburg County, Division 10, TIP I-5507. Debit \$570.00 from WBS 43609.3.2.

Reference: 1) Section 404 Regional General Permit No. 201902350 (RGP 50), Action ID No. SAW-2013-02330, issued November 12, 2020; 2) Section 401 General Water Quality Certification No. 4135, NCDWR Project No. 20191337v.2, issued September 21, 2020.

Dear Sir:

The purpose of this letter is to request modification of the United States Army Corps of Engineers (USACE) Section 404 Regional General Permit 201902350 (RGP 50) and associated North Carolina Division of Water Resources (NCDWR) Section 401 Water Quality Certification for the above referenced project.

Revisions resulting in changes to permitted impacts are proposed at three impact sites (Sites 1, 4, and 22). The changes to these sites are described below.

In addition, permitted impact Sites 11 and 12 are included in the revised permit drawings to highlight the changes to the drainage design from previously approved permit drawings. The design changes at Sites 11 and 12 will not result in any changes to the amount or type of permitted impacts and are not discussed further.

Previously authorized permanent stream impacts for the entire project totaled 2,427 linear feet, which included 1,131 linear feet of bank stabilization. Previously authorized temporary stream impacts totaled 1,357 linear feet. Previously authorized wetland impacts included 0.83 acre of permanent impacts (including 0.29 acre of mechanized clearing) and no temporary or hand clearing impacts.

Mailing Address:
NC DEPARTMENT OF TRANSPORTATION
ENVIRONMENTAL ANALYSIS UNIT
1598 MAIL SERVICE CENTER
RALEIGH NC 27699-1598

Telephone: (919) 707-6000
Fax: (919) 250-4224
Customer Service: 1-877-368-4968
Website: www.ncdot.gov

Location:
1000 BIRCH RIDGE DRIVE
RALEIGH NC 27610

The revised stream impacts for the project total 2,507 linear feet of permanent stream impacts (which includes 1,131 linear feet of stream bank stabilization impacts) and 1,318 linear feet of temporary stream impacts. The revised wetland impacts include 0.83 acre of permanent wetland impacts (0.56 acre of permanent fill and 0.27 acre of mechanized clearing) and no temporary or hand clearing impacts.

This modification will result in 0.02 acre of additional permanent wetland fill impacts and 80 linear feet of additional permanent stream channel impacts. There will be 0.02 acre less mechanized clearing impacts and 39 linear feet less temporary stream impacts than previously permitted. A summary of the changes is shown in Table 1 below.

Table 1 – Summary of changes to impacts*

Impact Type	Previously Permitted Impacts	Proposed Permit Modification	Difference
Permanent Stream Impacts	2,427	2,507	+80
<i>Bank Stabilization Impacts</i>	<i>1,131</i>	<i>1,131</i>	0
Temporary Stream Impacts	1,357	1,318	-39
Permanent Wetland Fill	0.54	0.56	+0.02
Mechanized Clearing in Wetlands	0.29	0.27	-0.02

*Stream impacts are in linear feet. Wetland impacts are in acres

Please see the enclosed DWR Pre-Filing Meeting Request Form, revised permit drawings, and roadway plans where drainage revisions resulted in design and/or impact changes to permitted impact sites. A narrative describing the revisions made to each permit impact site are presented in the following section.

Permit Impact Site Modifications (shown in revised permit drawings):

Site 1

The original design included the installation of a 52-foot long 48" reinforced concrete pipe (RCP). The 48" RCP would be an extension of an existing 42" RCP. Impacts at Site 1 included 28 linear feet of permanent stream impact from the pipe installation in stream SCC, 18 linear feet of permanent bank stabilization impacts and 10 linear feet of temporary stream impacts. To avoid conflicts with an existing 54" sanitary sewer line, the design has been revised. In the revised design, the proposed 48" RCP has been shortened to end before the sanitary sewer line and riprap will be installed in the stream channel to the top of bank. The new design includes a 24-foot long 48" RCP that does not impact the stream and 28 linear feet of riprap channel fill. The riprap fill will allow the proposed 48" RCP to drain over the existing sewer line and continue to provide vehicle access for billboard maintenance. The amount of permanent stream channel impacts will remain the same at this location; however, the impact type has been revised to riprap fill. The design change will not result in any change to permanent bank stabilization or temporary stream impacts at this location.

Site 4

A permit modification was approved for this site on November 12, 2020 that included design revisions to the originally permitted roadway fill slopes and channel change in this location to avoid impacting the existing sanitary sewer line. It has since been determined that the sanitary sewer line will need to be replaced; therefore, the proposed design will revert to a 2:1 roadway fill slope as was included in the original permit (approved by the USACE on December 18, 2019 and NCDWR on December 2, 2019). The previous permitted design shown in the permit modification included <0.01 acre of permanent wetland fill impacts due to roadway fill, <0.01 acre of permanent wetland fill impacts due to the channel change, and 0.02 acre of mechanized clearing impacts to wetland W3. Stream impacts totaled 130 linear feet of permanent stream channel impacts, including 95 linear feet due to roadway fill and 35 linear feet due to the channel change,

as well as 10 linear feet of temporary fill impacts to stream SNH. The proposed design will result in a total of 181 linear feet of permanent stream channel impacts to stream SNH, including 159 linear feet due to roadway fill and 22 linear feet due to the channel change, and no temporary stream impacts. Proposed wetland impacts will be 0.03 acre, including 0.02 acre of permanent wetland fill impacts due to roadway fill, <0.01 acre of permanent wetland fill impacts due to the channel change, and no mechanized clearing impacts in wetlands. The proposed design will result in an increase in permanent stream channel impacts of 51 linear feet and a decrease in temporary stream impacts of 10 linear feet. Overall total permanent wetland impacts to wetland W3 will remain 0.03 acre, although permanent wetland fill impacts have been increased to 0.03 acre and mechanized clearing impacts have been eliminated.

Site 22

During construction at this site, it was discovered the invert elevation used in the original design for the existing 48" RCP outfall did not accurately reflect field conditions. In the proposed design, the channel change for stream SG has been extended farther upstream to accommodate drainage from the 48" RCP extension. This 48" RCP extension has been installed at the correct pipe invert elevation based on field conditions and the length of the culvert extension will remain that same as previously permitted. Impacts for the previous permitted design included 140 linear feet of permanent stream channel impacts, including 129 linear feet from channel change and 11 linear feet from culvert extension, 24 linear feet of permanent bank stabilization impacts, and 49 linear feet of temporary stream impacts to stream SG. The proposed design will result in a total of 169 linear feet of permanent stream channel impacts, including 158 linear feet due to the channel change and 11 linear feet from the culvert extension, 24 linear feet of permanent stream bank stabilization impacts, and 20 linear feet of temporary stream impacts. The proposed design will result in an increase in permanent stream channel impacts of 29 linear feet and a decrease in temporary stream impacts of 29 linear feet. The design change will not result in any additional permanent bank stabilization impacts.

Revised Compensatory Mitigation

The North Carolina Division of Mitigation Services (NCDMS) previously provided compensatory mitigation for 1,296 linear of permanent stream impacts and 0.83 acre of permanent riparian wetland impacts, as referenced in the November 12, 2020 RGP 50 issued permit from the USACE and the September 21, 2020 401 WQC from NCDWR. The original permit approval indicated the NCDMS provided compensatory mitigation for 1,376 linear of permanent stream impacts and 0.83 acre of permanent riparian wetland impacts, as referenced in the December 18, 2019 GP 31 issued permit from the USACE and the December 2, 2019 401 WQC from NCDWR.

Of the revised permanent stream impacts totaling 2,507 linear feet for this modification, 1,131 linear feet are the result of bank stabilization and therefore do not require mitigation from USACE. Therefore, a total of 1,376 linear feet of permanent stream impacts will require mitigation based on this modification, which is an increase of 80 linear feet as compared to the previously approved November 12, 2021 RGP 50 issued permit. NCDWR would require a total of 444 linear feet of mitigation, which is the same amount of mitigation required by NCDWR shown in the previous permit modification. This amount is less than the mitigation required by USACE. There are no additional permanent wetland impacts, therefore no additional wetland mitigation is required.

No changes have occurred to special commitments for this project.

NCDOT requests to modify the permit for this project. Application is hereby made for modification of the USACE 404 permit and the 401 WQC from NCDWR. We have provided a method of debiting \$570.00 to be submitted to the NCDWR for processing the WQC renewal for I-5507, as noted in the subject line of this application.

A copy of this permit application and its distribution list will be posted in the NCDOT website at <http://connect.ncdot.gov/resources/Environmental>. Thank you for your assistance with this project. If you have any questions or need additional information, please contact Erin Cheely at either ekcheely@ncdot.gov or (919) 323-5192.

Sincerely,

for
Philip S. Harris III, P.E., C.P.M.
Environmental Analysis Unit Head

*Rounded totals are sum of actual impacts

NOTES:

At Sites 15, 20, and 22, the existing culvert is not buried, therefore the culvert extension will not be buried. The bottom elevation of the extended culvert will match the elevation of the existing stream bed.

At Site 15, 0.02 ac (65 lf) of temporary impacts due to construction activities are included within the bank stabilization impacts.

At Site 20, <0.01 ac (34 lf) of temporary impacts due to construction activities are included within the bank stabilization impacts.

At Site 22, <0.01 ac (24 lf) of temporary impacts due to construction activities are included within the bank stabilization impacts.

At Site 24, <0.01 ac (22 lf) of temporary impacts due to construction activities are included within the bank stabilization impacts.
