151 Patton Avenue, Room 208
Asheville, NC 28801-5006

ATTN: Ms. Nicholle Braspennickx
NCDOT Coordinator

Subject: **Application for Individual Section 404 Individual Permit, Section 401 Water Quality Certification, and Riparian Buffer Certification** for the Widening of NC 150 from the NC 16 Bypass in Catawba County to just west of the US 21/NC 150 Interchange in Iredell County, including the Interchange with I-77. Federal Aid Project No. STP-150(19), Division 12, TIP No. R-2307 and I-5717, Debit $570 from WBS 37944.1.1.

Dear Madam:

The North Carolina Department of Transportation (NCDOT) proposes to improve the NC 150 corridor for a length of approximately 15 miles from the NC 16 Bypass in Catawba County to just west of the US 21/NC 150 Interchange in Iredell County, North Carolina (NCDOT STIP Project No. R-2307). The proposed project also includes improvements to the I-77/NC 150 interchange in Mooresville (NCDOT STIP Project No. I-5717).

This is a Phased Individual Permit application. The project is divided into an A and B section.
Section A (R-2307 A) extends from NC 16 Bypass to SR 1902 (Harvel Road) and
Section B (R-2307 B) extends from Harvel Road to the US 21/NC 150 interchange, and includes the I-5717 component, the I-77 interchange.

This application presents "final" impacts for the B section of the project, and "preliminary" impacts for the A section of the project.

The B section is scheduled to let to construction in July 2019, and the A section is scheduled for October 2024.

Please see the enclosed ENG application form, Division of Mitigation Services (DMS) mitigation acceptance letter, permit drawing review meeting minutes, State Stormwater Management Plan (SMP), permit drawings, buffer drawings, and design plans for the B section of the project, and preliminary drawings from the A section.

PURPOSE AND NEED

The purpose and need for these projects are to improve capacity and reduce congestion along NC 150 from the NC 16 Bypass to just west of the US 21 Interchange.

NC 150 serves traffic demands and travel patterns for commuters and other travelers within and outside of the project study area and is a major east-west route between Shelby, Lincolnton, and Mooresville. Currently, heavy traffic occurs during peak periods within the project limits, resulting in frequent congestion and delays. Existing traffic congestion within the NC 150 corridor results in excessive travel times for commuters and travelers. Projected growth in the corridor, particularly around the I-77 interchange, will continue to increase these delays and travel times.

A Traffic Forecast Report was completed for the project in September 2013. The findings of the report indicated that 2015 NC 150 traffic volumes exceed two-lane capacity (14,300 vpd) between Sherrills Ford Road and the I-77 Interchange commercial district and that west of Sherrills Ford Road, NC 150 traffic volumes are anticipated to exceed capacity between 2015 and 2020. Existing traffic volumes within the I-77 commercial district already exceed the capacity of a five-lane facility (39,800 vpd). Design year (2040) traffic volumes along NC 150 within the project corridor range from approximately 18,000 vpd at NC 16 Bypass to 58,700 vpd at I-77. East of I-77, projected design year traffic volumes range from 53,100 to 45,300 vpd at US 21. Projected traffic volumes along the entire length of NC 150 will exceed two-lane capacity by 2040. Additionally, five-lane capacity will be exceeded from the Mooresville Crossing shopping center entrance to US 21 by 2040.

Table 2.4.1 of the EA shows the intersection LOS and delay along NC 150 within the project corridor based off of the base year (2015) traffic volumes and the No-Build traffic volumes for the design year (2040).

The proposed action includes widening, replacing several bridges, and access management measures. The proposed roadway cross-section will be a four-lane, divided facility including curb and gutter. In the rural areas, the median is 46 feet wide with eight-foot shoulders. In the more urban/suburban areas, the median is a 23-foot raised median with ten-foot shoulders. The proposed project also includes reconfiguring the I-77/NC 150 interchange.

NEPA DOCUMENT HISTORY

An Environmental Assessment (EA) was completed for this project in March of 2016, and a Finding of No Significant Impact (FONSI) was completed in June 2016. Additional copies will be provided upon request.

In compliance with the NEPA/404 Merger Process, project Concurrence points and dates are noted below:

Concurrence Point 1 was reached on December 12, 2012.

> A revised Concurrence Point 1 meeting was held and reached on August 13, 2014 to include the interchange with I-77 as TIP I-5717. To ensure a coordinated design, NCDOT is combining the two STIP projects into one environmental document. NCDOT proposes this approach because the projects are adjacent to each other and it would be practicable to develop the interchange modifications in coordination with the NC 150 widening improvements.

Concurrence Point 2 was reached on August 13, 2014. A revised CP 2 was reached on October 8, 2015.

Concurrence Point 2A was reached on June 10, 2015.

Concurrence Point 3 was reached on February 8, 2017.

Concurrence Point 4A was reached on March 22, 2017.

Concurrence 4B (for R-2307 B) was held on April 12, 2017.

Concurrence 4C (for R-2307 B) was held on February 7, 2018.

Indirect Cumulative Impact Analysis

A Community Impact Assessment and an Indirect and Cumulative Effects Report and Land Use Scenario Assessment was prepared for this project in June 2014. Copies of the document are available on request.

Indirect Effects Summary

Local planners currently feel that the proposed R-2307 project is likely to have a minor increase on the pace or intensity of development. Since there are so few roads crossing Lake Norman, widening the road is not expected to change travel patterns, but will improve the level of service for drivers currently using the road and those who will begin using the road in the future because of residential and commercial growth within the FLUSA. A four-lane road may attract new businesses or light industries who desire easier access to an interstate, although this effect is expected to be minor since most anticipated major commercial nodes on the corridor are already at the interchanges of NC 150 with an interstate (I-77) or major highway (NC 16 Bypass).

For these reasons, construction of R-2307 is expected to have a minor indirect effect on land use decisions in the FLUSA. The Indirect and Cumulative Effects Screening Matrix resulted in a conclusion of Possible Indirect Scenario Assessment. A Land Use Scenario Assessment has been completed to further evaluate the nature and extent of these potential effects.

Cumulative Effects

Past and Future Projects – Development in the past few years included redevelopment at the NC 150/NC 16 intersection and continued expansion and infill at the NC 150/I-77 interchange. A new library is under construction in the northeast quadrant of NC 150 and Sherrills Ford Road. An interchange was recently completed at I-77 and Brawley School Road. In the FLUSA, several new developments are planned, as described in Section 2.

Current Project – The proposed project would widen approximately 12.5 miles of NC 150 from a two- or three-lane undivided roadway to four lanes with a median, likely with partial control of access along existing alignment and limited control of access on new alignment. A median is proposed to be constructed along the remaining 2 miles of the corridor, which is currently a combination of a four- and five-lane undivided roadway. Three new location alternatives (between 1.7 and 2.2 miles long, depending on alternative) are under consideration to avoid or minimize impacts to the Terrell Historic District.

There are approximately 25,000 acres of land in the FLUSA. Of this, approximately 10,000 acres (40%) is currently developed. Of the 15,000 acres of undeveloped area, less than 1,000 acres (4% of the total) is considered constrained – protected by ponds, stream buffers and floodway restrictions. The remaining 14,000 acres (56% of the total) of land is classified as undeveloped/ unconstrained, which generally represents land within the FLUSA that could be developed in the future.

In summary, several commercial developments have been constructed recently or are planned for construction in the near future. Other infrastructure and development projects are anticipated at a slow but steady pace. This project is expected to result in a minor decrease in travel time for most drivers but may increase access and exposure to properties along a potential new alignment section. According to local planners, development is likely to be concentrated in “village nodes” and at the interchanges at the project termini.

Due to the level of protection of environmental resources, the additional development as a result of the Build Scenarios is not anticipated to result in significant cumulative impacts to natural resources.

CULTURAL RESOURCES

Section 106
On August 25, 2015, NCDOT, FHWA, and HPO met for a consultation about project effects on National Register-listed and -eligible resources. There are two Section 106 eligible resource within the selected alternative, and the project will have No Adverse Effect on both resources. Concurrence forms documenting the effects findings contained in Appendix B of the EA.

Section 4(f)
The Marshall Steam Station is the only 4(f) resource found in the selected alternative. Proposed earthwork would require the acquisition of approximately 0.47 acre of property from the Marshall Steam Station. Level of impact and nature of use resulted in a de minimis finding.

Archaeological Resources
NCDOT provided project information to the HPO on August 13, 2015. Based upon review of that information, HPO did not recommend an archaeological survey in their correspondence of October 13, 2015.

Wild and Scenic River System
There are no Wild and Scenic Rivers in the project area.

RESOURCE STATUS

Wetland and stream determinations within R-2307 were conducted using the field delineation method outlined in the 1987 Corps of Engineers Wetland Delineation Manual and subsequent guidance including the Eastern Mountains and Piedmont Regional Supplement. Mr. Steve Kichefski of the U.S. Army Corps of Engineers (USACE) conducted a preliminary jurisdictional determination on May 27, 2015.

Jurisdictional features within the R-2307 project are all within the Catawba River Basin, Hydrologic Unit Code 03050101.

There are no High Quality Waters (HQWs), Outstanding Resource Waters (ORWs), 303d-listed impaired streams, trout waters, primary nursery areas, or anadromous fish waters within the study area, or within one mile downstream of the study area. Lake Norman is a water supply lake and it, and its tributaries, are designated as Water Supply-IV, Class B, Critical Area waters.

IMPACTS TO WATERS OF THE United States

Tables 1-4 provide impact values and descriptions of jurisdictional water resources for the project. Site numbers correspond with the permit (hydraulic) drawings included in this application.

Table 1-1: U-2307 B "Final" Wetland Impacts (values in acres)

Permit Site	NRTR Site	NC WAM Classification	Wetland Size	Permanent Fill in Wetlands	Mechanized Clearing	Hand Clearing	Impact Description
7	WA	Non-Tidal Freshwater Marsh	0.06	0.05	<0.01	--	Fill for roadway widening.

FEDERALLY PROTECTED SPECIES

Plants and animals with Federal classification of Endangered (E) or Threatened (T) are protected under provisions of Section 7 and Section 9 of the Endangered Species Act of 1973, as amended. The USFWS lists the following federally protected species for Iredell and Catawba Counties.

Table 6: Federally protected species listed for Catawba and Iredell Counties as of June 27, 2018

County	Common Name	Scientific Nome	Federal Status	Habitat Present	Biological Conclusion	Last Survey
Catawba & Iredell	Dwarf-flowered heartleaf	*Hexastylis naniflora*	Threatened	Yes	No Effect	2/23/2013
Catawba & Iredell	Northern long-eared bat	*Myotis septentrionalis*	Threatened	No	Compliant with 4(d)	
Catawba	Schweinitz's sunflower	*Helianthus schweinitzii*	Endangered	Yes	No Effect	9/27/2013
Iredell	Bog turtle	*Clemmys muhlenbergii*	Threatened due to similarity of appearance	No	Not Required	--

Bald Eagle and Golden Eagle Protection Act

The lakeshore of Lake Norman does support bald eagle habitat. A review of the NCNHP Natural Heritage Element Occurrences (NHEO) (July 2014 dataset) indicates one known occurrence, within 1.0 mile of the study area. No nests and no known occurrences were detected within the corridor during field studies conducted between May 2014 and June 2014.

A desktop GIS analysis of the project study area, as well as a 1.13-mile radius (1.0 mile plus 660 feet) of the project limits, was performed in May 2013, using 2012 color aerials. Lake Norman is large enough and sufficiently open to be considered a potential feeding source for the bald eagle.

A survey of the project study area was conducted in May 2013 and no nests were found. Additionally, a review of NCNHP Natural Heritage Element Occurrences (NHEO) (July 2014 dataset) revealed one known occurrence of this species, within 2.0 miles of the project study area. That occurrence is known as the "Catawba #2 Duke Energy Marshall Steam Station" site and had an active nest in 2011. The active nest site is approximately 0.4 miles northwest from the intersection of NC 150 and SR 1902 (Harvel Road). Due to the distance from the study area, (>660 feet), it has been determined that this project will not affect this species.

AVOIDANCE, MINIMIZATION AND MITIGATION

The NCDOT is committed to incorporating all reasonable and practicable design features to avoid and minimize jurisdictional impacts, at all stages of a project, and to provide full compensatory mitigation of all remaining, unavoidable jurisdictional impacts.

Overall avoidance and minimization measures include:

Grass swales were added/created anywhere there was room to allow for stormwater treatment and velocity reduction.

Hazardous spill basins were designed under transmission lines; however, Duke Energy would not permit these stormwater devices under transmission lines.

Specific avoidance and minimization measures include:

Roadway Plansheet 5 (No 404 Site Number, Site 1 and 3 on Buffer Drawings): Avoidance
Roadway slopes were reduced to avoid 404 impacts. (However, Catawba Buffer impacts remain).

Sites 3 and 4: Minimization
The multi-use path on the bridge will be used to collect stormwater so it will not directly discharge into Lake Norman. Stormwater will be collected into hazardous spill basins on either side of the bridge.

Site 5: Avoidance and Minimization
Fill slopes and drainage related impacts were shifted to avoid impacts to the wetland.

Sheet 9 (No 404 Site Number, Site 8 on Buffer Drawings): Avoidance
Fill slopes and drainage related impacts were shifted to avoid impacts to Lake Norman. (However, Catawba Buffer Impacts to remain.

Site 7: Minimization
There will be no roadway drainage directly to this stream. All roadway water is being carried for treatment in a basin.

Sheets 16, 17, 18, 19, 20, 21, 22 (No Jurisdictional Impacts) Minimization
All stormwater on these pages are routed to a basin for treatment and velocity reduction.

Mitigation:

NCDOT has avoided and minimized impacts to jurisdictional resources to the greatest extent practicable as described above. The remaining unavoidable impacts for R-2307 B, noted below, will be mitigated for by the NC Division of Mitigation Services as noted in the attached acceptance letter.

0.06 acre of riparian wetland,
447 linear feet of streams,
20,406 square feet of Zone 1, and 14,992 square feet of Zone 2 of Catawba Buffer,

The mitigation for the R-2307 A impacts have not been requested, as the projected construction start date for the A section is greater than 5 years.

REGULATORY APPROVALS

Section 404: Application is hereby made for a modification to the USACE Individual 404 Permit as required for the above-described activities.

Section 401 and Catawba River Riparian Buffer Authorization: We are hereby requesting a modification to the 401 Water Quality Certification from the N. C. Division of Water Resources. In compliance with Section 143 215.3D(e) of the NCAC, we will provide $570.00 to act as payment for processing the Section 401 permit application previously noted in this application (see Subject line).

Thank you for your assistance with this project. If you have any questions or need additional information, please contact Michael Turchy at maturchy@ncdot.gov or (919) 707-6157. A copy of this application and distribution list will also be posted on the NCDOT website at:
http://connect.ncdot.gov/resources/Environmental/Pages.

Sincerely,

Philip S. Harris III, P.E., C.P.M.
Environmental Analysis Unit Head

Western terminus: NC 16 in Catawba County, US 21 in Iredell County. Includes exit 36 on I-77 in Iredell County.

18. Nature of Activity (Description of project, include all features)

The North Carolina Department of Transportation (NCDOT) proposes to improve the NC 150 corridor for a length of approximately 15 miles from the NC 16 Bypass in Catawba County to just west of the US 21/NC 150 Interchange in Iredell County, North Carolina (NCDOT STIP Project No. R-2307). The proposed project also includes improvements to the I-77/NC 150 interchange in Mooresville (NCDOT STIP Project No. I-5717).

This is a Phased Individual Permit application. The project is divided into an A and B section.
Section A (R-2307 A) extends from NC 16 Bypass to SR 1902 (Harvel Road) and
Section B (R-2307 B) extends from Harvel Road to the US 21/NC 150 interchange & includes the I-5717 component, the I-77 interchange.

19. Project Purpose (Describe the reason or purpose of the project, see instructions)

The purpose and need for these projects are to improve capacity and reduce congestion along NC 150 from the NC 16 Bypass to just west of the US 21 Interchange.
NC 150 serves traffic demands and travel patterns for commuters and other travelers within and outside of the project study area and is a major east-west route between Shelby, Lincolnton, and Mooresville. Currently, heavy traffic occurs during peak periods within the project limits, resulting in frequent congestion and delays. Existing traffic congestion within the NC 150 corridor results in excessive travel times for commuters and travelers. Projected growth in the corridor, particularly around the I-77 interchange, will continue to increase these delays and travel times.

USE BLOCKS 20-23 IF DREDGED AND/OR FILL MATERIAL IS TO BE DISCHARGED

20. Reason(s) for Discharge

Impacts will result from the widening the roadway and shoulders, lengthening and/or replacing hydraulic structures, as well as bridge construction.

21. Type(s) of Material Being Discharged and the Amount of Each Type in Cubic Yards:

Type Amount in Cubic Yards	Type Amount in Cubic Yards	Type Amount in Cubic Yards
See attached cover letter	See attached cover letter	See attached cover letter

22. Surface Area in Acres of Wetlands or Other Waters Filled (see instructions)

Acres See attached cover letter

or

Linear Feet See attached cover letter

23. Description of Avoidance, Minimization, and Compensation (see instructions)

See attached cover letter

24. Is Any Portion of the Work Already Complete? ☐ Yes ☒ No IF YES, DESCRIBE THE COMPLETED WORK

25. Addresses of Adjoining Property Owners, Lessees, Etc., Whose Property Adjoins the Waterbody (if more than can be entered here, please attach a supplemental list).

a. Address- See attached permit drawings.

NORTH CAROLINA
Environmental Quality

December 19, 2018

Mr. Philip S. Harris, P.E., CPM
Environmental Analysis Unit
North Carolina Department of Transportation
1598 Mail Service Center
Raleigh, North Carolina 27699-1598

Dear Mr. Harris:

Subject: DMS Mitigation Acceptance Letter:

R-2307B, NC 150 Widening from Harvel Road to US 21 (Includes Interchange with I-77), Iredell and Catawba Counties

The purpose of this letter is to notify you that the Division of Mitigation Services (DMS) will provide the stream, wetland and buffer mitigation for the subject project. Based on the information supplied by you on December 19, 2018, the impacts are located in CU 03050101 of the Catawba River basin in the Central Piedmont (CP) Eco-Region, and are as follows:

Stream and Wetlands	River Basin	CU Location	Eco-Region	Stream			Wetlands		
				Cold	Cool	Warm	Riparian	Non-Riparian	Coastal Marsh
Impacts	Catawba	03050101	CP	0	0	447.0	0.06	0	0

*Some of the impacts may be proposed to be mitigated at a 1:1 mitigation ratio. See permit application for details.

All buffer mitigation requests and approvals are administrated through the Riparian Restoration Buffer Fund. The NCDOT will be responsible to ensure that appropriate compensation for the buffer mitigation will be provided in the agreed upon method of fund transfer. Upon receipt of the NCDWR's Buffer Authorization Certification, DMS will transfer funds from the NCDOT 2984 Fund into the Riparian Restoration Buffer Fund. Upon completion of transfer payment, NCDOT will have completed its riparian buffer mitigation responsibility for TIP Number R-2307B. Subsequently, DMS will conduct a review of current NCDOT ILF Program mitigation projects in the river basin to determine if available buffer mitigation credits exist. If there are buffer mitigation credits available, then the Riparian Restoration Buffer Fund will purchase the appropriate amount of buffer mitigation credits from NCDOT ILF Program.

Buffer	River Basin	CU	Eco-Region	Buffer Impacts		
				Zone 1	Zone 2	TOTAL
Impacts	Catawba	03050101	CP	20,406.0	14,922.0	35,328.0

The impacts and associated mitigation needs were under projected by the NCDOT in the 2018 impact data. DMS will commit to implement sufficient compensatory stream and wetland mitigation credits to offset the impacts associated with this project as determined by the regulatory agencies using the delivery timeline listed in Section F.3.c.iii of the In-Lieu Fee Instrument dated July 28, 2010. If the above referenced impact amounts increase, then this mitigation acceptance letter will no longer be valid and a new mitigation acceptance letter will be required from DMS.

If you have any questions or need additional information, please contact Ms. Beth Harmon at 919-707-8420.

Sincerely,

James B. Stanfill
DMS Asset Management Supervisor

Dr. Cynthia Van Der Wiele – USEPA	(absent)
Donna Hood - DWR	(phone)

Date of Minutes: May 16, 2017

Additional Participants:

Bryan Key, NCDOT Roadway Design
Paul Atkinson, NCDOT Hydraulics
Craig Freeman, NCDOT Hydraulics
Colin Mellor, NCDOT NES
Carla Dagnino, NCDOT NES
Michael Turchy, NCDOT NES
Karen Reynolds, NCDOT PDEA
Mark Staley, NCDOT REU
Randy Henegar, TGS Engineers
David Petty, TGS Engineers
Zack Richard, TGS (Minutes)

The project involves improvements to NC 150 from SR 1840 (Greenwood Rd) in Catawba County to US 21 in Iredell County.

The meeting began at 10:30 am.

General Notes / Comments

- TGS Engineers noted design has progressed past conceptual through sheet 23, beyond sheet 24 is purely conceptual.
- DWR requested that all outlet pipes into Hazardous Spill Basins (HSB) be as far away as possible from the HSB outlet structure so that a spill would travel along the full length of the HSB and function as intended.
- DWR requested that riprap at outlets entering Lake Norman and JS streams be larger than Class B. TGS to evaluate enlarging to Class I where appropriate.
- TGS noted where practical proposed ditches are shown to end just outside Lake Norman Full Pond elevation 760' per correspondence with Duke Energy rep regarding anticipated shoreline permit (an exception would be Sheet 6 Str#0608).
- Per DWR inquiry, TGS indicated proposed HSB outlet structures to date are shown as concrete headwalls with sluice gates. DWR advised against sandbags acting as HSB outlet structures.

Sheet 4

- DWR had concerns about the site built on coal ash fill (432+00 to 435+00 LT) and stated there should be no live ditch flow through exposed coal ash. Indicated limits should be determined. TGS recommended borings be taken along/within proposed ROW around coal ash site and precede from there.

Sheet 5

- DWR advised to keep pipe outlets at non-erosive velocities.
- NCWRC expressed concerns about fill in Lake Norman at DRW7. Asked if it was prudent to avoid impacts here by steeping up fill slopes or moving drive. Subsequent comment from NES indicated there will be no JS line at this location as the jurisdiction of Lake Norman is at elevation 760'. NES further advised to steepen slopes to avoid 404, 401, buffer and FERC impacts.
    - Initial evaluation indicates 404, 401 and FERC impacts could be avoided by steepening slopes but not buffer impacts. Therefore, TGS will evaluate options for relocating drive and obtaining additional survey to avoid buffer impacts.

Sheet 6

- TGS noted isolated depression at 452+00 LT shown to be drained with 18" pipe (Str# 0608). Per NCWRC request, TGS to evaluate ditching rather than piping within BZ1.
- Sheet 6-8, -L- Sta. 458+00 to 466+00 LT & 478+00 to 487+00 LT: TGS noted a proposed multi use path (10' paved,3' grassed shoulder) with runoff to sheet flow across grassed shoulder and down fill slope into Lake Norman (i.e. Treatment of this water limited to 3' grassed shoulder). Anticipate grassed say 2:1 fill slope down then rock fill at 2' above full pool to bottom of lake. Dirty water from roadway to be picked up and taken to HSBs.

Sheet 7

- TGS noted the median ditches meet swale criteria and generally, that swales have been proposed wherever practical.

Sheet 8

- TGS noted there are no anticipated impacts to wetland WM at 486+00 LT however are proposing discharge from HSB to dissipate on riprap pad then drain thru the wetland.

Sheet 9

- TGS noted L line runoff here and throughout routed to HSB wherever practical. Also noted proposed runoff from Y lines here and in similar locations is matching existing drainage conditions to the extent practical.

Sheet 11

- TGS noted previously proposed HSB at 520+00 LT was deleted per subsequent Duke Energy correspondence regarding FERC permit/recreation area.
- TGS noted proposed drainage on sheets 10-12 may be re-evaluated to better match existing drainage patterns once Duke Energy transmission issue is resolved.
    - While understanding the FERC permit precludes a HSB here, for the official record, DWR stated they would like to see a HSB in this area for protection of the resources.

Sheet 13

- Per DWR inquiry re outlet into the wetlands 555+00 LT, TGS noted the discharge is offsite drainage and that str# 1318 is a drop box with a pipe out at minimum slope to minimize velocity. Per DWR, TGS to enlarge outlet riprap to Class I.

Sheet 15

- TGS noted proposed str#1523 at 576+00 LT shown to tie to existing 36" pipe and discharge to an existing pond due to evaluation yielding no practical location for a HSB.
- DWR expressed concerns about existing pipes and stormwater retention pond/basin being able to handle proposed flows and noted in its experience many existing pipes are under sized. TGS indicated recommendations to NCDOT will be made for any under sized pipes and applicable pre/post calculations will be performed as part of design process.

Sheet 16/17

- TGS noted stormwater for sheets 16 & 17 is being taken to a HSB on sheet 17.
- TGS stated an additional HSB may be added in the vicinity of 608+00 LT.

Sheet 18/19

- TGS noted stormwater for sheets 18 & 19 is being taken to a HSB on sheet 19.

Sheet 20

- TGS noted stormwater for sheets 20 & 21 is being taken to a HSB on sheet 20.
- DWR okay with outlet location into HSB (i.e. already satisfies second bullet under General comments).
- Agencies questioned the blue line on plans that looks like a stream.
    - TGS noted this blue line is shown in the FS and presumably is a ditch flow line, not a JS stream.
    - USACE confirmed nothing on JDM in this area.

Sheet 22

- TGS noted stormwater for sheets 22 & 23 is being taken to a HSB on sheet 22.

Sheet 23

- TGS noted that there are two system on this sheet tying into existing systems and that from this sheet thru sheet 30 the property along NC 150 is very built out. TGS indicated effort will be made to propose swales and/or HSBs (the Critical Area extends to sheet 26) in this remaining area, however additional locations may not be practical.

Sheet 24

- TGS indicated no practical places for HSBs and will try to maintain existing drainage patterns.

Sheet 26

- TGS noted existing 60" RCP is to be retained and extended upstream and downstream. Riprap shown in the stream as a precaution in case our calculations show it is needed, but will avoid if possible.
- DWR questioned if the upstream area of the 60" RCP cross pipe was a previous stormwater basin. TGS indicated it is on private property and is uncertain. TGS confirmed the riser structure was in ruins as noted in the FS.

Sheet 29

- TGS noted existing 5'x6' RCBC is to be retained pending Division inspection and extended downstream. Portion of outlet channel to be realigned and lined with riprap.
    - Per USACE inquiry, riprap will be keyed in such that finished grade of rip rap would match existing/proposed finished grade of stream.
    - Per DWR inquiry, TGS clarified the "stream plug" label corresponds to the existing stream to be filled in and is unrelated to the storm drainage system outlet pipe shown. Pipe anticipated to outlet on riprap beside culvert wing.
- NCWRC asked if u-turn bulb could be shifted some to avoid JS feature.
    - TGS to investigate. *[Subsequently discussed with Roadway Engineer who indicated u-turn bulb could possibly shift as much as 40' upstation or 60' downstation (these are maximum shifts based on initial assumptions and may not be able to shift that far but would require more detailed analysis to confirm). Analysis indicated a 40' shift upstation would have no impact on culvert length and a 60' shift downstation would allow for shortening the culvert extension up to 12', but given the meander of the stream, I would recommend tying realigned channel to existing stream at same location to best match flow direction. Given this, either alternative would offer no reduction in permanent impact due to fill, therefore I recommended Roadway Engineer not consider further unless we hear otherwise.]*
- USACE expressed concerns with outlet velocities into JS streams.
    - TGS to minimize outlet velocities and to provide stable dissipation.

Sheet 30

- TGS noted existing 4'x5' RCBC is to be retained pending Division inspection and extended up and downstream with 60" RCP.
    - Per DWR inquiry, TGS confirmed proposed drainage system is to cross well above 60" RCP.
    - Per DWR, TGS to minimize drainage system pipe outlet (on sheet 29) slope to practical extent.
- Per DWR inquiry regarding existing pipes noted as rusty, TGS indicated majority of existing pipes are to be filled and/or removed.

Sheets 34, 35, 36

- TGS noted these sheets are going to curb and gutter sections and that existing drainage patterns will be maintained as practical.

The meeting adjourned at 11:50 am.

Subject: Minutes from Merger CP 4C Permit Drawings Review Meeting held on February 7, 2018 for R-2307B in Iredell and Catawba Counties.

Marella Buncick – USFWS	(present)
Marla Chambers – NCWRC	(absent)
Dr. Cynthia Van Der Wiele – USEPA	(absent)
Donna Hood - NCDEQ	(present)

Date of Minutes: March 5, 2018

Additional Participants:

Bryan Key, NCDOT Roadway Design
Paul Atkinson, NCDOT Hydraulics
Craig Freeman, NCDOT Hydraulics
Bill Zerman, NCDOT Hydraulics
Michael Turchy, NCDOT NES
Mark Staley, NCDOT REU (absent but please keep on distribution list)
Allen Raynor, TGS Engineers
Burke Evans, TGS Engineers (phone)
Randy Henegar, TGS Engineers
David Petty, TGS Engineers (Minutes)

The project involves improvements to NC 150 from SR 1840 (Greenwood Rd) in Catawba County to US 21 in Iredell County.

The meeting began at 3:30 pm.

General Notes / Comments

- TGS noted per agency request at 4B, riprap at outlets entering Lake Norman and JS streams enlarged from Class B to Class I throughout project.
- TGS noted the SMP (attached to front of the Wetland & Stream Impact Permit Drawings) lists all proposed swales, hazardous spill basins, filtration basins and dry detention basins.

Wetland & Stream Impact Permit Drawings

Sheet 6

- Site 1: Per DEQ request and no objection from others, the proposed geotextile shown under riprap (Detail 6B) in all jurisdictional areas will be deleted. Similar for Sites 1, 2, 5, 6, 7, 8, 9, 10, 11 & 12.
- Site 2: An inquiry was made as to why the outfall was shown in TDE rather than PDE. It was noted the NCDOT cannot obtain PDE from Duke Energy in this and similar locations.

Sheet 8

- Site 5: It was noted that impacts to wetland WM have been avoided.

Sheet 13

- Site 7:
    - Per DEQ inquiry, TGS noted 24” outlet pipe is proposed at 0.5% slope.
    - It was noted that NCDOT is confirming whether a JS should be shown on the upstream side of the wetland as shown in the EA (stream SK). Following 4C meeting, EAU confirmed stream SK should be shown upstream of wetland WA and sent a request to Location & Surveys on 2/13/2018 for the Final Survey to be updated accordingly.
    - It was discussed that wetland WA is likely a total take based on impacts shown on 4C planset. Wetland WA will be accounted for as a total take on the wetland impact summary sheet.

Sheet 26

- Site 8: TGS noted riprap was proposed in base of channel to provide a stable transition from existing 66” CMP to proposed 60” RCP.
- Site 9: TGS noted riprap is proposed in base of channel at outfall to diffuse flow and provide a stable transition to existing channel (similar for sites 10 & 11). Per USACE inquiry, riprap will be keyed in such that finished grade of rip rap would match existing/proposed finished grade of stream (similar for sites 10 & 11).

Sheet 29

- Site 10: Following up on 4B inquiry as to whether u-turn bulb could be shifted some to avoid JS feature, TGS relayed the following from 4B minutes: *[Subsequently discussed with Roadway Engineer who indicated u-turn bulb could possibly shift as much as 40’ upstation or 60’ downstation (these are maximum shifts based on initial assumptions and may not be able to shift that far but would require more detailed analysis to confirm). Analysis indicated a 40’ shift upstation would have no impact on culvert length and a 60’ shift downstation would allow for shortening the culvert extension up to 12’, but given the meander of the stream, it would be recommended to tie realigned channel to existing stream at same location to best match flow direction. Given this, either alternative would offer no reduction in permanent impact due to fill, therefore it was recommended that Roadway Engineer not consider further.]*
- Per USACE inquiry following 4C meeting, TGS confirmed there are no proposed drops that could possibly break aquatic life passage for the stream between sites 11 & 12 along the existing box culvert to be retained (survey still incorrectly shows as 60” CMP) and proposed 60” dia. pipes. Same applies to the main lines at sites 8,9 & 10.

Buffer Impact Permit Drawings

Sheet 5

- Site 1: Per TGS inquiry, DEQ stated to leave BZ2 impacts for skimmer basin as Mitigable rather than changing to Exempt.
- Site 2: TGS noted per agency request at 4B, proposed drive has been shifted to avoid 404, 401 and FERC impacts while leaving some BZ2 impact for construction of slope. No related objection noted.

Sheet 6

- Site 3: TGS noted, per agency request at 4B, downstream end of pipe has been shortened such that ditching now shown within BZ1.
- Site 4 (& Sheet 8 Site 7): TGS confirmed all roadway runoff on the bridge and causeways flow to one of the two hazardous spill basins on Sheets 6 & 8 and, per inquiry, routing this runoff to the basins precludes basin outfalls from outletting farther outside lake.
- Site 5: Per TGS inquiry, DEQ indicated impacts should be kept as Mitigable as shown to be safe.

Sheet 11

- Site 10: Per Sheet 5 Site 1 discussion above, Site 10 impacts for skimmer basin to be changed from Exempt to Mitigable.

The meeting adjourned at 4:15 pm.

Project Description

Project Length (lin. miles or feet):	6.94 miles	**Surrounding Land Use:**	Commercial, Medium Density Residential

	Proposed Project	**Existing Site**
Project Built-Upon Area (ac.)	121.0 ac.	69.0 ac.
Typical Cross Section Description:	four lane shoulder section with 23'+ grassed median and four to six lane curb and gutter section with 0' to 23' raised grassed median - all 12' lanes	two lane undivided shoulder section and four lane undivided curb and gutter section - all 12' lanes
Annual Avg Daily Traffic (veh/hr/day):	Design/Future: 58860 Year: 2039	Existing: 47900 Year: 2019

General Project Narrative: (Description of Minimization of Water Quality Impacts)

The proposed project involves widening NC 150, an existing two & four-lane undivided arterial, to a four & six-lane median divided superstreet to improve vehicular mobility and safety from Greenwood Rd (SR 1840) in Catawba County to US 21 in Iredell County. The existing 10-span, approximately 1170-ft long by 34-ft wide bridge over Lake Norman will remain in place and transition from one lane in each direction to two eastbound lanes. A proposed 9-span, approx. 1210-ft by 52-ft wide bridge will carry two westbound lanes and a 10-ft multiuse path just upstream of the existing bridge. Bridge to be constructed from anchored barges. Existing causeways will be widened on the upstream side using rock fill up to 2 ft above Duke Energy Full Pond elevation and then grassed sideslopes from there up. There are five proposed culvert extensions over UT's toward end of project – riprap is proposed in base of channels to reduce discharge velocities.

Roadway runoff in the vicinity of the Lake Norman crossing is routed to two hazardous spill basins. Dry detention/filtration basins are proposed on sheets 14, 17(dry detention only) 19, 20 & 22 for both peak attenuation and treatment. Otherwise, stormwater diversion has been minimized. Grassed swales are used for treatment throughout the project, where practical. Outlet pipe slopes are minimized. All BMP's have been incorporated throughout the project to the maximum extent practicable.

22	-L- 677+04 RT N: 35.59578, E: -80.87873	(1)Catawba River (Lake	Forebay	15.0	2.70	0.1 inches of runoff from NBUA	980.0	cf	2430.0	cf	Yes

*Hazardous spill basins are pollution prevention measures designed for spill containment rather than stormwater treatment. Under Required / Minimum Treatment and Treatment Achieved, provide the minimum required volume and the actual HSB volume, respectively. Refer to the NCDOT Stormwater Best Management Practices Toolbox (2014) for design guidance.

Additional Comments

Two hazardous spill basins have been provided at the Lake Norman crossing to protect against the accidental spill of hazardous materials due to NC 150 being classified as an arterial and the crossing being within 1/2 mile of the critical area of a water supply source classified as WS-IV. Roadway and adjacent ditch runoff on the bridge, causeways and each adjacent sag is routed to these basins.
Forebays used to provide pretreatment by diffusing flow and removing debris for the basins shown on SMP sheet 6.

Additional Comments

Dry detention basins have been incorporated to account for the increase in impervious area and the extension of curb & gutter section by attenuating the 10-yr peak basin outflow to at or below the existing peak discharge, and thereby minimizing downgrade erosion. Filtration basins have been used to filter stormwater and reduce pollutants and solids. Forebays have also been used to provide pretreatment by diffusing flow and removing debris.
